VISITING a large woodworking factory some time ago, in New Haven, Conn., where veneered doors are made in large quantities, I interviewed the foreman with regard to the method of manufacture of these doors, with the following results: "Our first operation is to take common coarse white pine boards, with sound knots, and which have been well kiln-dried. The stock used is generally 16 feet long, 1 × 12 inches. This stuff is surfaced on both sides by a Daniels planer without regard to thickness, as some boards are thinner than others, while others are warped in drying, and the thickness of the boards is immaterial, perfectly seamed surfaces only being necessary. After the stock is planed up it is cut into such lengths as the bill of doors calls for. They are ready now to be glued up. The face board of whatever hardwood to be used is planed generally to ¾ of an inch thick, and is also run through a Daniels planer. The stock is now ready to go to the glueing press, and as the Daniels planer makes the best glueing surface in the world, no scratch planing is needed. After properly heating in a box the stock is brought out and carefully glued, the hardwood face parts marked for it. From three to five parts are put in the press at one time, and a pressure of twenty tons, brought down by screws, is put upon these parts. After remaining in the press the proper time they are taken out, and generally remain several days before being worked up, which gives the glue plenty of time to harden. When ready to work again these parts are taken to a Daniels planer and squared up, after which the parts are taken to a very nice cutting table or bench saw, and are cut up to sizes required, leaving them ⅛ of an inch large for future dressing. It is a positive necessity that the saw cuts free and clear, as heating has a tendency to warp the stock or spring it slightly, which would make it necessary to dress the stuff again. If the saw does not heat, the stiles come out perfectly straight, and these stiles can be laid on a Daniels planer bed, and a light shaving taken off. They are now straight, and if the saw table is in good condition, square, the other side may be finished with pony planer or with a Daniels; I prefer a Daniels, because it makes a better glueing surface, and if the planer is in good shape the work is turned out from the planer perfect, so far as square and surface are concerned. The work is now ready for the veneering, the thickness of which is immaterial, as it may vary from the thickness of thin paper to ¼ inch. Heated cauls are now used for the veneer, and the stiles, if heated at all, are just warmed, and the veneer glued on by piling up with a hot caul between each stile.

# THE RETAILER AND Wood-Worker

## EXCURSION OF WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

[COMMUNICATED.]

IT is several years since a lumbermen's excursion has been held on the Lake of the Woods, but the custom was revived this year, when the following invitation was sent out to over two hundred retail lumbermen throughout Manitoba and the Northwest Territories :

"You are cordially invited to join us in a two days' outing on the Lake of the Woods. The steamer Keenora will leave her dock at Rat Portage on Monday, August 15th, at 24 o'clock, and it is the intention to go as far as Fort Francis, thus giving our friends an opportunity to have a full daylight view of not only the Lake of the Woods, but also the far-famed Rainy river.

(Sgd) RAT PORTAGE LUMBER CO., LTD.
BRUNETTE SAW MILL CO., LTD.
KEEWATIN LUMBERING AND MFG. CO., LTD.
B. C. MILLS, TIMBER AND TRADING CO., LTD.
GRAHAM, HORNE & CO.
PACIFIC COAST LUMBER CO., LTD.
VIGARS BROS.
SAVANNE LUMBER CO."

One hundred and twenty-five acceptances were received by the indefatigable secretaries, Messrs. J. C. Graham and A. F. E. Phillips, the names being as follows :

J. B. Mather, President of the Association, Glenboro ; John Dick, Secretary of the Association, Winnipeg ; M. C. Flett, Norman ; J. A. F. Bleau, St. Boniface ; G. F. Birney, Morris ; R. McDonald, Roland ; J. P. Allaire, Somerset ; J. E. Gaudin, Napinka ; W. C. Thorburn, Broadview ; J. Schwartz, Altona ; Gus. Wagner, Plum Coulee ; H. Doell, Winkler ; J. L. Campbell, Melita ; John Love, Grenfell ; F. W. Falkner, Grenfell ; L. Marks, Plum Coulee ; Col. Anstruther, Portage la Prairie ; C. W. Plummer, Boissevain ; T. Leese, Foxwarren ; E. Greenshaw, Shoal Lake ; D. Sinclair, Winnipeg ; J. E. Parrott, Saltcoats ; R. J. Stead, Cartwright ; J. Broadbent, Thornhill ; W. Busby, Reston ; W. C. Van Nostrand, Elkhorn ; J. McNaughton, Killarney ; J. H. Hanbury, Brandon ; J. Thompson, Wolseley ; J. H. Hughes, Brandon ; J. A. Badgley, Emerson ; J. White, Rapid City ; J. McGuirl, Moosomin ; John Lockead, Deloraine ; W. Reid, Strathclair ; T. D. Robinson, Winnipeg ; J. J. Moon, Russell ; Geo. Lister, Winnipeg ; B. Harvey, Qu'Appelle ; J. H. MacCaul, Qu'Appelle ; J. Foreman, Alexander ; J. Rennie, Shoal Lake ; F. McPherson, Binscarth ; J. Friesen, Gretna ; J. Dyck, Winkler ; J. Esau, Winkler ; J. Friesen, Winkler ; J. W. Jones, Selkirk ; F. Shaw, Dauphin ; W. Bell, Winnipeg ; W. A. Smith, Carnduff ; T. A. Cuddy, Minnedosa ; J. Sharpe, Fleming ; E. Brough, "Free Press," Winnipeg ; J. K. Robson, Treherne ; G. W. Murray, Winnipeg ; W. Sillers, Holmfield ; T. Rutherford, La Riviere ; T. Kellett, Sewell ; P. A. McIntosh, Winnipeg ; R. Conn, Douglas ; W. Cranston, Clearwater ; C. Burley, Portage la Prairie ; A. McDonald, Portage la Prairie ; J. Davidson, Manitou ; H. J. Badham, Stockton ; W. Armstrong, Portage la Prairie ; H. Byrnes, Portage la Prairie ; G. H. Stacy, McGregor ; J. Conway, Crystal City ; D. Leckie, Hartney ; J. E. Campbell, Carman ; G. B. Housser, Portage la Prairie ; R. O'Hara, Brandon ; John Boyd, Deloraine ; E. Parker, Winnipeg ; W. Bell, Portage la Prairie ; G. O. Alserbrook, Winnipeg ; A. Black, Winnipeg ; R. Magee, Sintaluta ; H. McDougall, Moose Jaw ; E. T. Simpson, Moose Jaw ; Chas. Brown, Hilton ; J. Shaw, Dauphin ; J. F. Frame, Virden ; A. J. Archibald, Elva ; W. W. Ireland, Carberry ; D. Stewart, Rosenfeld ; E. Nichol, Boissevain ; T. Nicol, Boissevain ; T. H. Patrick, Souris ; A. M. Stewart, Morden ; D. N. McMillan, Morden ; A. N. Shaw, Miami ; J. J. Lane, Morden ; John Taylor, Portage la Prairie ; Fred. Robinson, Fort William ; F. Avery, Austin ; J. A. Ovis, Souris ; A. D. Chisholm, Griswold ; J. A. Thompson, Griswold ; C. Willoughby, Regina ; J. Caswell, Rathwell ; R. Shearer, Melita ; P. Schwartz, Altona ; Wm. Irwin, Newdale ; W. Burley, Portage la Prairie ; Joseph Rinn, Elm Creek ; S. McClain, Carman ; A. R. Stevens, Cypress River ; J. M. Neilson, Carberry ; F. Dagg, Holland ; J. McCutcheon, Holland ; J. McElræ, Sidney ; R. A. Mather, of the Keewatin Lumber and Mfg. Co., Keewatin ; J. Feren, Savanne Lumber Co., Savanne ; A. E. Phillips, Pacific Coast Lumber Co., Ltd., Winnipeg ; J. C. Graham, Rat Portage Lumber Co., Ltd. ; (Winnipeg branch) ; Geo. Campbell, B. C. Mills, Timber and Trading Co., Ltd., Winnipeg ; W. Robertson, Rat Portage Lumber Co., Ltd., Rat Portage ; E. W. Hogan, Savanne Lumber Co., Savanne ; R. Vigars, Vigars Bros., Port Arthur ; G. Shaw, Traffic Manager's office, C.P.R., Winnipeg ; M. McDonald, M. & N.W. Ry., Portage la Prairie ; A. H. Bailey, "Commercial," Winnipeg.

A number of the lumbermen arrived at Rat Portage on Sunday, but the majority journeyed by the Steamboat Express, which left Winnipeg at 4:30 Monday afternoon and reached Rat Portage at 9:30 the same evening. After making themselves acquainted with a few of the places of interest around town, the travellers embarked on the Keenora, and promptly at midnight a sharp blast from the steamer's whistle announced everything in readiness for sailing. As the beautiful steamer pulled out from her wharf all the steamboats in the vicinity whistled a "bon voyage."

There being more passengers than there was state-room accommodation for, the berths were balloted for, the lucky drawers of state-rooms being much envied by their less fortunate brethren, who only succeeded in getting a hammock or a blanket. After running about forty miles, Captain Thompson deemed it advisable to cast anchor for a short time, on account of the heavy gale which was blowing, but most of those on board were unaware of this fact until daylight, when the anchor was hove up and the steamer got under way again. There was quite a heavy sea running on the Big Traverse, and a few of the dwellers on the prairie were wishing themselves in their yards again. One sturdy dealer, on being condoled with regarding the weak state of his stomach, indignantly replied that such was not the case, as he was "throwing as far as any of them."

About 9 o'clock in the morning the port of Rainy river, on the American side, was reached, and after the purser, Mr. R. D. Ross, had delivered his papers to Uncle Sam's representative at that point, the Keenora proceeded on her way up Rainy river. Having got into smooth water, breakfast was now called, and judging from the quantity of eatables that were disposed of, and the smiling faces of those who partook thereof, the first meal on board was a decided success ; the rest were even more so. About noon the sorting boom of the Rainy Lake River Boom Corporation was reached, but no stop was made excepting for the purpose of picking up one of the lumber company's bush managers. The retail men, however, had a good view of the sorting works, and as there was a large quantity of logs in the boom at the time, it gave them a very good idea of the immense proportions of the lumber business in this district.

Proceeding up the river, between the well tilled farms on the Canadian side and the dense bush on the American side, the Long Sault Rapids came into view about one o'clock. Great excitement was now manifested upon every countenance as the Keenora sailed majestically on to meet the rushing waters. By the skillful handling of Captain Thompson, the steamer eventually reached the top of the dangerous rapids, and all went down to dinner with their appetites sharpened by the excitement they had just experienced. Dinner was no sooner over than the Manitou Rapids were announced, although they are comparatively short as compared with the Long Sault. The river is much narrower at this point, and the volume of water much heavier. A heavy cable was run out and secured to the pier above the shute by ten or twelve Indians, and in a few minutes the Keenora was safely over, and, after handing over a sack of flour to the Indians, proceeded on her way to Fort Francis.

A short stop was made at Emo, a flourishing settlement about 20 miles below the fort, and the band, which had been discoursing excellent music during the day, played several pieces for the benefit of the residents of this rising town. A short visit was made to the saw mill and grist mill, and after several attempts at photographing the company, the voyage was continued. About 8 o'clock in the evening Fort Francis was sighted, and a rush was made to the fore part of the vessel to get a view of the objective point of the expedition. Three blasts from the Keenora's whistle announced to the good people of the Fort that an invasion was imminent, and by the time the Keenora had safely breasted the rushing water below the Couchiching Falls, and pulled in along side of the wharf, a large crowd was waiting to welcome the visitors. A few minutes sufficed for the disembarkation of the party, and although it was rapidly growing dark a visit was made to the uncompleted lock by the side of the falls, and the general feeling amongst the hard headed business men from the west was one of regret that this important work should have so long remained in this unfinished state. The falls were very much admired, as was also the town site, which is without a doubt second to none in the Dominion.

As a good many of the travellers had not slept very much on the previous night, those who did not occupy state-rooms on the steamer engaged rooms at the hotels, where they expected to enjoy sweet slumber until 6 o'clock in the morning, the time appointed for departure on the homeward trip. But alas! these fond hopes were soon to be shattered. A few of the "boys," fearing that the excursion might get a little tame, or perhaps on account of the exhilarating effects of the waters from Rainy Lake, decided to hold an impromptu concert on board the Keenora. After the singing of the "Hen Convention" by the popular travelling representative of one of the lumber companies, another ventured to sing a Scotch song, for which he was loudly applauded by the rest of the performers. Encouraged by this unexpected appreciation of his efforts, he favored the company with another Scotch song and another, until by sheer force he was compelled to desist. An adjournment was then made to the main deck, where the big drum belonging to the band was brought into requisition and a genuine Indian pow-wow was inaugurated, accompanied by such whoops and yells as would do credit to any band of Sioux that ever roamed the prairie. After awakening everything with life in it on board the Keenora, the braves proceeded up town to serenade the slumberers in the hotels, and those unfortunates at first came to the conclusion that the lumber companies had enticed them up there to be murdered in cold blood by the merciless horde which apparently surrounded them, but one of the braves unfortunately yelled something about "cull plank," and the terrified innocents recognized the voices of their brethren from the west. By this time the "Skiti-wah-boo" began to tell upon the warriors, and they died peacefully one after another until nothing was heard but the roar of the falls.

By six o'clock on Wednesday morning everyone was on board, looking none the worse of the terrible experiences of the night just passed, and after waiting for the fog which enveloped the falls to rise, the lines were thrown off, and after a rush through the turbulent waters beneath the falls the Keenora dropped down the river and the homeward journey was commenced.

The passage of the rapids was again made without incident, and the port of Rainy River was reached about two o'clock in the afternoon. A short stop was made here for the purpose of getting a clearance for the steamer at the custom house, and most of those on board took advantage of the opportunity to set foot on Uncle Sam's domain and invest in some little nick-nacks at the store as a memento of the trip. On pulling out the band played the "Star Spangled Banner," and three hearty cheers were given for "Old Glory" floating gaily in the breeze from the Custom House Building. This proceeding appeared to greatly please the hoary haired representative of Uncle Samuel.

The trip across the Big Traverse in direct contrast to that of the previous day was delightful ; the lake was calm as a mill pond, and although the sun was shining brightly the breeze caused by the Keenora as she skimmed over the water dispelled any oppresiveness that might have resulted from the burning rays of "Old Sol."

Shortly after crossing the Big Traverse the committee piped all hands to the hurricane deck, where the follow-

ing address to the hosts was read by Mr. J. L. Campbell, of Melita :

TO THE CANADIAN WHOLESALE LUMBERMEN:

Gentlemen :--It is with pleasure and much satisfaction that we, the Western Retail Lumbermen, do on this occasion express our thanks and appreciation of the excellent and most enjoyable excursion given us. It must have entailed a great deal of expense and trouble on your part to perfect and carry out the elaborate programme which has given us so much enjoyment. From the time we boarded the train at our respective towns, we felt that we were the guests of the wholesalers; then the trip on the splendid steamship Keenora up the Lake of the Woods, with its ever changing views in the sea of islands ; then the 100 mile run up the Rainy River, that mighty stretch of water which is surely designed to play an important part in the commerce of our fair Dominion, and whose existence in such magnitude was a revelation to many of us. We also remember with pleasure your unceasing efforts to contribute to our comfort and enjoyment. From the splendid effects of the fireworks display as we pulled from the wharf at Rat Portage, accompanied by the music of the excellent band which you so kindly provided, and who in such a good-natured way seemed to be untiring in their efforts to make the trip enjoyable to us, by their delightful music, it has been a continual round of pleasure. Captain Thompson and his officers will also be remembered for their kind consideration of us. We also wish to convey to the C. P. R., M. & N. W., and Dauphin Railway companies our appreciation of their splendid accommodation provided us by their respective trains. But we must express our regrets at the absence of Mr. D. C. Cameron, whose presence always affords us pleasure. We must especially thank you for the abundant hospitality in every way provided us, and we feel sure that your kindness must cement more closely than ever the always pleasant business relationship which has hitherto existed between the wholesale and retail lumbermen of Western Canada.

J. B. MATHERS, President.
JOHN DICK, Secretary-Treasurer.

Rat Portage, Aug. 17th.

The representatives of the manufactures replied briefly, and Captain Thompson, on behalf of the Rainy River Navigation Co., expressed the hope that the retailers would bring their wives the next time they came.

After a rapid passage from the mouth of the river through the thousands of beautiful islands of the Lake of the Woods, the Keenora pulled along side of her wharf at nine o'clock in the evening, and the company stepped ashore congratulating themselves and each other on the successful termination of the pleasantest trip of the kind they had ever embarked upon. Most of the visitors stayed in town over night and left for their homes on the Pacific express at one o'clock in the afternoon.

During the disembarkation the steamer Clipper, which was lying at an adjacent wharf, brilliantly illuminated the Keenora wharf and Water street with her powerful electric search light.

Much regret was expressed at the absence of the manager of the Rat Portage Lumber Co., Mr. D. C. Cameron, who was unable to attend on account of illness.

## STRIKE OF MILL EMPLOYEES.

A STRIKE of the employees in the mills of the Rat Portage Lumber Company, at Rat Portage and Norman, Ont., occurred during the past month. The direct request was for a reduction of the hours of labor at the mills from eleven hours to ten hours, and for an advance of 25 cents per day in wages.

The manager of the company was ill at the time and could not be interviewed. The men stopped work, it is said, before the position of affairs could be made known to him. Several days afterwards, the mills being idle in the meantime, a meeting took place between the manager and the men which resulted in reducing the working hours to ten for a full day, but it was stated that the company could not just then advance the wages. On a vote being taken by the men on this proposition, they decided to resume work, but made the decision subject to the manager giving them a signed agreement as to the ten-hour day. This he refused to do, when the men resolved to stand out for the full demand. Men were then brought up from the east, and on Tuesday, the 16th inst., one of the mills at Norman started work, when strikers to the number of three hundred assembled and a detachment entered the mills with clubs, driving out those who were at work. Police protection was then sought by the company, and at time of writing the strike, which lasted fully two weeks, is believed to have collapsed, as all the company's mills have started running, with men imported from the east. The strikers are hopelessly beaten, and do not appear to know what course to pursue, as their places are being rapidly taken up by the new arrivals. Many of the old hands are reported to be anxious to resume work, but on account of having joined a labor union are unable to do so until the executive committee of the organization decide that they may.

The Rat Portage Lumber Company have been paying as high or higher wages than the average in Canada or the United States, many of the men receiving $2.25 per day. This does not include foremen. Now that a reduction in the working hours has been granted, it is not thought that the men have any serious grievances.

## OTTAWA LETTER.

[Correspondence of the CANADA LUMBERMAN.]

As might be supposed, the lumbermen of this district are watching with keen interest the proceedings of the Quebec conference, as all are now convinced that some proposition will be advanced to secure more satisfactory trade relations in respect to forest products. Hon. Don. M. Dickinson, the special representative of the Michigan lumbermen, was in the city yesterday on his return from Quebec, and from what could be gleaned, no stone will be left unturned to accomplish an arrangement whereby Canadian logs may be secured for the Michigan mills. Mr. Dickinson appeared before the American commissioners before he left Quebec, and urged the repeal of the Ontario regulation requiring the home manufacture of all logs cut within the province. It is recognized that the problem is not easy of solution, many contending that it is not within the power of the Dominion premier to change the Ontario law. There appears to be a growing feeling among Ottawa valley lumbermen that the action of the Ontario Association of Lumbermen in requesting the Ontario government to prohibit the export of saw logs was, after all, a wise step. Of course, there are lumbermen who, having previously shown opposition to the movement, cannot now consistently recede from their position. Mr. Levi Crannell, of the Bronsons & Weston Company, is one who takes strong ground from a business point of view against the restriction of the exportation of logs to the United States. In the course of an interview, he said that to compel the manufacture into lumber of all logs cut in Canada would undoubtedly have the effect of raising the United States lumber tariff against this country. It is impossible to find as good a market elsewhere, he adds, as the United States on certain kinds of lumber. Yellow pine from the south is, on account of its proximity, competing against Canada in the South American republics, and is already taking the place of Northern pine in the United States. While he would like Canada to be self-sustaining, he contends that it is necessary to keep open the United States market for this industry in order to keep the lumbering men now in the country employed.

The difficulty at the Rockland mills of the W. C. Edwards Company is not yet finally settled. A request was recently forwarded by the mill men to Mr. Edwards asking for a ten hour day, and agreeing to a corresponding reduction in wages. It is said that the company are willing to grant this request next spring, but that at present, owing to dull markets, profits will not warrant such a step.

Some interesting work has been going on in connection with the dredging of the Ottawa river for the interprovincial bridge. As is well known, the sawdust from the saw mills has been settling in the river for many years, and places an obstacle in the way of the work. There lies on the bottom between 27 and 40 feet of mill refuse, and on the site of each pier this material is brought away down to the solid rock itself, which is sometimes 80 feet below the surface of the water. The sawdust removing machine resembles the mouth of a huge fish, and is attached to a steam derrick in the same manner as an ordinary dredge. One would naturally think that the hole made by the removal of a few loads of sawdust would be filled in as quickly as removed by the surrounding material, but this is not the case. The water has packed the refuse into so solid a bed that an excavation can be made to the bottom with the walls perpendicular. The water must have to a great extent a preserving influence on the sawdust, as it nearly all comes to the surface in much the same condition as when it came fresh from the mills. It thus appears that an almost inconceivable period must elapse before nature can rid the Ottawa of this unnatural bed.

Last week Mr. T. Kavanagh, of Peterboro, agent of the Rat Portage Lumber Co., left for that place with 100 picked men, engaged to work in the woods up there, at wages varying from $16 to $22 per month. The wages of woodsmen in the Ottawa district the coming winter will be about the same as last season, log cutters reciving $17 per month and others from $14 to $16. It is believed that about the same quantity of logs will be taken out.

OTTAWA, August 25th, 1898.

## QUESTIONS AND ANSWERS.

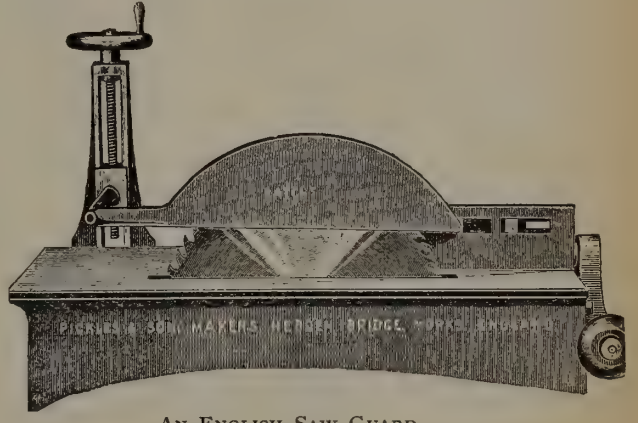
"J.Q.," St. John, N.B., writes : "Is juniper and hackmatack the same kind of wood? If not, explain the difference."

ANSWER.—The juniper and hackmatack trees are distinct. There are many varieties of the juniper found in the United States, but the red cedar is the only one native to Canada. It is found in Ontario and Southern New Brunswick, and is sometimes confused with the red cedar of British Columbia, although the latter is really a redwood. It grows 24 to 30 metres in height ; the wood is light, soft, very close and straight grained, and the color a dull red, the thin sapwood being nearly white. There is also an evergreen shrub called a juniper, of low-spreading form, with awl-shaped, rigid leaves. The hackmatack, or American larch, is the name given in the New England States to the tamarack. It is a coniferous tree, with slender deciduous leaves; the wood is coarse grained, hard and strong, and the color a light, bright red. It is used largely for knees for vessels, and for ship timber, fence posts, telegraph poles, and the like.

## AN ENGLISH SAW GUARD.

IN England, because of strictly enforced laws compelling their use, saw guards are more generally employed than in this country. Illustrated herewith is a circular saw guard made by a leading firm of English tool makers, and which is described by our contemporary, Timber, as follows:

The standard is fixed to the saw bench top by two set-screws or bolts. In the centre of the standard is a set-screw which works through the sliding arm which carries the cover. This is raised and lowered by simply turning the hand-wheel on the top of the standard, and thus made adaptable for less diameter saws. The cover is made semi-circular ; the front of saw is covered by a plate, whilst the back side is partially shielded. The action of the saw in running



AN ENGLISH SAW GUARD.

naturally creates a current of air, and the air being conducted in the trough form cover, blows away the sawdust in front of the saw so that it at once enables the operator to see the gauge lines or ascertain if the saw is cutting true. It will be noticed that the standard carrying the cover is fixed beyond the periphery of the saw, and thus does not interfere with or lessen the efficiency of the bench for cross-cutting purposes, whilst for sharpening purposes, by the slackening of the screws or bolts at foot of standard, it may be swung clear of the saw, thus giving the workmen clear access to the saw.

The points of excellence claimed are : Entire prevention of accident through the timber being thrown over the saw against the operator ; preventing the sawdust being thrown into the eyes and face of the operator, also preventing the sawdust accumulating in front of the saw ; its great efficiency and simplicity throughout, and its adaptability for all makes of saw benches. The guard is made in four sizes, viz., to take saws from 12 to 48 inches diameter.

A LUMBERMAN from Algoma whom I recently met was somewhat indignant at the Dominion government, not on account of any question of lumber or log duties, but from what might be termed lack of patriotism. He contended that Canadian industries should at least be accorded the support of the government. In the lumber trade this was not done. The Dominion government were bringing in timber for canal work from the state of Minnesota, which he regarded as especially unjust in view of the tariff wall against Canadian lumber. If I am not incorrectly advised, the bulk of the canal construction in the Dominion, as with other public works, is let by tender, and the contractor is free to buy his supplies in the cheapest market, but complying with specifications. This may account for the purchase of foreign timber. In my opinion, the government might very well insert a clause in the specifications confining the contractor to Canadian materials, whenever they can be obtained in this country of equally good quality and at a reasonable figure.

* * *

MR. Carl Zeidler, of Toronto, returned not long since from the European continent, where he went in connection with his business interests. He visited the principal cities of Great Britain, France, Germany, Belgium and Holland, and reports being well received ; but he is more convinced than ever of the absolute necessity of making Canada better known in these countries. "Why," he remarked, "Canada is really not known at all as a separate country, but is looked upon as a small section of the United States. There are a few, of course, who are quite well informed, but they are doing business with us, and are, from policy, keeping quiet about it." Referring particularly to the timber trade, Mr. Zeidler stated that great injury was being done to the Canadian trade by the shipping of lumber on consignment. As an inducement to the shipper, there are agents who will offer to handle the stock at a small commission. Upon delivery the lumber is piled on the dock, and in a very short time there are storage, insurance, piling, lighterage and other charges against it, which the shipper never dreamed of. A buyer comes along and secures the lumber almost at his own figure, and the shipper discovers, to his sorrow, that his receipts from the shipment are nil. This, Mr. Zeidler says, is the way much of the consignment business is done, and that, altogether, it is unsatisfactory. He believes that Canada could supply a vast amount of wood goods to European consumers, as he received enquiries for numerous kinds of material, such as mining timber, furniture stock, lathwood, staves, excelsior, etc. He does not think we could profitably export excelsior at the prices paid. At Brussels he was offered 90 francs per ton, equal to $18 of Canadian money. "I found," said he, "that many of the largest consumers import lumber in the log. This is very unprofitable, as they pay freight on much waste material which can be used only as fuel. However, they are gradually realizing this fact." Speaking of the most effective manner of securing foreign trade, he ventured the opinion that Canada should be represented in each country by one or two practical men, who would give information to importers as to where goods could be secured, and also protect the shipper by acting as arbitrator in cases of dispute. Then, he thinks, direct trade between the exporter and consumer would result.

* * *

MR. Wilson, of the Cutler & Savidge Lumber Company, was recently in Toronto, and to a press representative gave his views on the lumber question. The Cutler & Savidge Company is a Michigan concern which carries on lumbering operations in Algoma, with mills at Cutler, Ont. "You see," said Mr. Wilson, "the war between the United States and Spain has destroyed, for the time being, the market which has hitherto been the principal outlet for southern pine. A large number of mills in the south have, in consequence, been closed ; but there is a great deal of this southern pine on hand, and the owners are shipping it to the Northern States, where they dispose of it at slaughter prices. Having this to contend with, in addition to the $2 duty, you can see it knocks us out, for the Northern States is, of course, the principal market for Canadian white pine. When the war closes the southern pine will again have its market in the West Indies and the South American countries, but the duty of two dollars per thousand feet Canadians will still have to contend against. That duty is a bad thing for Canadian lumber." In response to the question, "Do you think that if Canada were to put an export duty on logs it would induce Congress to remove the duty," Mr. Wilson gave an emphatic "no," and continued : "What we want to try and do is to get the United States to take off that two dollar duty. This is what we should devote our energies to. Now, what Canadians desire is that mill owners shall set up mills on this side of the line. That is so, isn't it? Well, then, if the export duty is put on logs it will not induce the Americans to remove their import duty ; neither will it induce Americans to build mills in Canada. But, on the other hand, get the United States to remove the two dollar duty and it will be an encouragement for Americans to start mills on this side, for it pays better to cut the logs on this side than it does to tow them across the lake and cut them in Michigan." "But why did not more of them start mills in Canada when the duty conditions were more favorable than they are now?" was asked. "Well, I'll tell you. If you had your money invested in a mill and plant at some point in Michigan you would not be inclined to shut down and remove to Canada as long as your plant was in good condition and did not require replacing. That, then, is the condition of affairs with a good many mill owners in the United States. As these plants became old and obsolete the tendency would be, with the two dollar duty expurgated, to remove to Canada, for the average loss entailed in towing logs across the lake is 10 per cent. What we want is a permanent settlement of this tariff question on lumber. We do not want to be doing one thing this year and undoing it the next."

* * *

I FIND the following in the Mississippi Valley Lumberman : "Some years ago an English syndicate desired to interest some Wisconsin lumbermen in a tract of sugar pine timber in Northern California. A party was made up, consisting of the English promoter ; Mr. Tainter, representing Knapp, Stout & Co.; an Eau Claire timber owner, and a representative of the firm of Bronson & Weston, Canadian lumbermen. This party proceeded to the Pacific Coast and carefully looked over the timber. The mill was up in the mountains, and the lumber, after coming from the saw, was transported by means of a flume some forty miles to the sea coast. Having been up in the mountains at the mill, the party decided to make the trip down to the coast in the flume. Little rafts were made by nailing two or three boards together, and seated firmly in the centre of these, one on each so-called raft, the party started, and about four hours later arrived at the company's office down on the low lands. It was a rather risky ride, Mr. Tainter says, for some time the water in the flume flowed very swiftly, and then again the flume would make short turns and cross deep chasms, that would almost make one's hair stand on end. In making the sharp turns one had to be very careful so as not to lose his seat, for it was impossible to steady one's self by taking hold of the sides of the flume, owing to the splinters that would stick in one's hand. Then to make the matter worse, it was an awful hot day, the temperature being over 100 in the shade in the low country. The end of the flume was about five miles beyond the company's office, and the party had planned to get off at the office so as to avoid being out in the hot sun any longer than necessary. Mr. Tainter reached the office landing first, and having been used to riding logs in the Red Cedar river in Wisconsin, it was an easy matter for him to jump off. He warned the rest of the party to be ready, and as they came along he helped them off, one after another, until the English promoter reached the landing. Like most of his nationality, he had a good many "traps" with him, which Englishmen usually call "luggage." He did not heed Mr. Tainter's warning, being busy getting his boxes and bags in shape to throw off, and, as a result, went spinning by and on down five miles to the end of the flume in the broiling hot sun. Mr. Tainter says he was a sorry spectacle when he drove up to the company's office a few hours later."

### ARE YOU A LUMBER EXPORTER?

EVERY lumber manufacturer and exporter in Quebec and the Maritime Provinces should be represented in the "Eastern Canada and Export Edition" of this journal, to be published October 1st. This issue will have an extensive circulation in Great Britain, France, Germany, South America, etc., and will contain valuable information as to the requirements of these markets. Write immediately for advertising rates.

No matter in what part of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publisher of this journal. No reader should wait for a personal invitation. Assistance thus rendered, as well as suggestions for making this journal more valuable to subscribers, will be much appreciated.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., AUGUST 31, 1898 No. 32.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

## LIMITS AND MILL FOR SALE
### By Public Auction

THERE WILL BE EXPOSED FOR SALE BY public auction, in the Russell House, Ottawa, Ontario, on WEDNESDAY, 17TH AUGUST NEXT, at 12 o'clock noon, about Two Hundred and Seventy-One Miles of very desirable TIMBER LIMITS in the country tributary to Prince Albert, Sask., and about Seventy-Four Miles tributary to Edmonton, the whole estimated to contain over three hundred million feet board measure of Spruce and Tamarac Timber, large and of fine quality.

The Limits are easy of access. Those at Edmonton are directly on the Saskatchewan, and those at Prince Albert are tributary to the same river. They are well watered and the creeks easily driven.

Also, that well-known and valuable saw mill property, known as Moore & Macdowall's, in the Town of Prince Albert, Territory of Saskatchewan, comprising saw mills fitted with modern machinery, having a capacity of 2,500,000 feet per month, together with a planing mill in separate building, containing planer, matcher, etc., with railway siding, large boarding house, one cottage, two large dwelling houses, and piling ground, the whole property comprising an area of about one hundred and fifty acres.

The Prince Albert Limits will be offered in one block, together with the mill property above described, making together an exceedingly desirable investment.

The Limits in the neighborhood of Edmonton will be offered separately.

For further particulars apply to:

WILLIAM LITTLE, Prince Albert, Sask.
JOHN C. BROWNE, Ottawa.
R. B. KESSEN, Temple Building, Toronto.
J. B. MONK, Winnipeg, Man.

From whom maps of the Limits and other information may be obtained; also from

W. H. LEWIS,
Auctioneer.

***POSTPONED.***

**The foregoing sale has been postponed until SATURDAY, 17TH SEPTEMBER, at same hour and place.**

WANTED.

1½ TO 4 INCH BIRCH AND MAPLE; 1½ TO 4 inch Hickory; 1½ to 3 inch Rock Elm.
THOS. MYLES' SONS, Hamilton, Ont.

FOR SALE.

SEVERAL CARS, END DRIED, WHITE Maple, 4/4, also 4/4 quarter sawed stock, flooring etc. J. S. FINDLAY, Owen Sound, Ont.

WANTED.

RED AND WHITE PINE STRIPS OF GOOD clean quality—½", ¾". 1", 1¼", 1½", and 2" thick by any narrow width State particulars, etc., to "AJAX," care of CANADA LUMBERMAN.

CANADIAN PULP WANTED.

A GLASGOW FIRM DESIRES TO RECEIVE consignments of mechanical spruce pulp, 50 per cent. moist; also soda or sulphite pulp. Can give A1 references and security if desired. BOX 34, CANADA LUMBERMAN.

WANTED FOR CASH.

BASSWOOD, ALL THICKNESSES; MAPLE, all thicknesses; Brown Ash, all thicknesses; Soft Elm, all thicknesses; small lots of Cherry, Oak and White Ash.

THE HARDWOOD LUMBER CO., LIMITED,
40 Richmond St. E., Toronto.

## CURRENT TRADE CONDITIONS.

### ONTARIO.

The lumber trade during the last week of August was not particularly active, and although it was expected that orders for fall stocking up would counteract the falling off in the demand for building material, there has been a slackening in business which was scarcely anticipated. No pine lumber of any account is being shipped to the United States, but some mills report enquiries for the better grades for future delivery. The local requirement is confined largely to finishing lumber, and there are evidences that the time for the commencement of new buildings is nearly over for the present season. Complaint is still made that much lumber is being sold on a margin of profit altogether too small. Hardwoods are still meeting with ready sale, and are being bought up close to the saw by wholesale dealers and local industries. On some lines prices are a little better, and there is reason to expect still higher quotations before the winter sets in. Shingles have been moving freely, but the production this season has been quite heavy, and there is now no scarcity of stock, while prices are a shade weaker.

Preparations are being made by lumbermen for going into the woods. In the Ottawa valley and Georgian Bay pine districts some camps have already been put in, and from what can be learned logging operations will be conducted on about the same scale as last winter. Of course, in the Georgian Bay district, the cut will be much less, as nothing will be done on limits owned by Michigan manufacturers.

### QUEBEC AND NEW BRUNSWICK.

The decrease in the quantity of lumber shipped from the St. Lawrence to British ports this season will be offset to some extent by the shipments to South America, which have been the largest in ten years. This is due to the prosperity prevailing in the Latin Republics. Five ships have already cleared from Montreal for South America. The barques Strathmuir, Bjorne and C. W. Janes, and the ship Mary L. Burrill, now in port, are also loading deals at Hochelaga for Buenos Ayres, and will carry one million feet each. Four other ships and several tramp steamers have also been chartered for the same purpose. The season's shipment to South America is expected to exceed fifty million feet. Chartering is fairly active, he rate to London being 42s 6d, and to Manchester and Bristol 45s. Local trade is dull, and retail dealers are buying only as necessity demands. In New Brunswick there is a feeling that there will be some demand from the United States for provincial lumber. Since the cessation of the war the market has been strengthening, and more business is doing in spruce lumber, shingles and laths. Clapboards are still dull and no improvement in prices can be reported. Shipments to the British market were not as heavy last week as earlier in the month.

### UNITED STATES.

The greatest obstacle in the way of more liberal buying of lumber by the wholesale dealers of the Eastern States is the high prices asked by manufacturers, while as yet it has been found impossible to advance retail prices. Were the wholesale dealers able to sell at a greater margin of profit, it is believed that heavy purchases for fall trade would be made, as there has been, within the past month, a marked revival of confidence. It would seem that the only course is for wholesalers to gradually raise their prices, as there is no hope of manufacturers' quotations weakening. On the other hand, within the past week the Mississippi Valley Lumbermen's Association have advanced quotations 50 cents per thousand, and the tendency generally is upward. Pine lumber is selling freely at Buffalo and Tonawanda, and the exceptionally active demand for box lumber which has been a feature of the season's trade shows but little abatement. A Tonawanda report states that enquiries for 4/4 have been very numerous within the past two weeks. The New York market is lifeless with respect to pine, but hardwoods are decidedly lively, and prices are stiffening. This also reflects the situation in other markets. The supply of dry hardwoods is comparatively small, and the great question to dealers is how to obtain the necessary stock to fill orders. Birch seems to be improving, and thick maple and soft elm are required in excess of supply.

### FOREIGN.

Considering the active consumption of wood goods in the British market, it is somewhat surprising that dealers do not exhibit more activity to secure stocks, more especially as the import season will close in a couple of months. The receiving ports present a scene of activity, but much of the goods arriving are contracted for and will go direct into consumption. There has been a slight improvement in the London trade, and several cargoes of spruce have been placed at satisfactory prices. White pine is also a little firmer. Liverpool reports state that a couple of cargoes of spruce deals and some consignments of waney board pine and elm timber have changed hands, and inquiries are in the market for waney board pine and spruce deals for the Mersey Docks and Harbor Board. Complaint is made by some importers that the quality of St. John spruce deals is deteriorating, a point which should be carefully watched by our shippers, as the lumber meets with strong competition from the Baltic, and the trend of trade is easily changed. Prices of wood goods for the west coast of England will be found in another column.

## STOCKS AND PRICES.

James Carr, of Woodstock, has received the contract for supplying the timber for the new C.P.R. elevator at St. John.

It is reported that Dan Arpin and William Scott, of Grand Rapids, Mich., have purchased 110,000,000 feet of pine timber in the vicinity of Winnipeg.

At Toledo bill stuff is selling at the following prices: 2 x 4 to 2 x 8, 12 to 16 feet, $12; 2 x 10, $13; 2 x 12, $14; one dollar advance for every two feet over 16 foot lengths.

The Mississippi Valley Lumbermen's Association have advanced the price of lumber 40 cents per thousand. This applies to all grades excepting No. 3 boards which has been advanced only 25 cents.

The mills of the Columbia Valley Lumber Company, at Golden, B.C., are working to their full capacity. The greater portion of the output is taken by the C.P.R. for construction and repairs.

At a recent sale of Churchill & Sims, London, Eng., some lines of spruce sold at £8 15s and 3rds at £7. The square oak ex Castlemoor from Quebec was al

most given away at the price of 85s per load.

The tug Calumet, of Marquette, Mich., lost a raft of logs valued at $150,000 belonging to the Sutherland & Innes Company, of Chatham, Ont. The raft went ashore at Grand Marais and broke up.

The Saginaw Lumber & Salt Company recently sold 5,000,000 feet of Canadian logs to Bousfield & Co., of Bay City. Green & Braman, of same place, have sold a like amount to Eddy Bros. & Co.

The feature of the Tonawanda market is the numerous enquiries for box lumber 4/4 and thicker. It is said that more enquiries were received during the past week than for the previous six months. It is expected that higher prices will rule at an early date.

At Buffalo all white pine above No. 1 cuts in quality is in strong demand at firm prices. Box lumber seems to be less inquired for, although prices are holding their own. The rush orders for boxes have apparently reached their limit, a condition which is accounted for by the closing of the Spanish war.

A. Murphy, of Antrim, Ont., invites tenders up to September 26th for the supply and delivery at the Waba Creek, on the town-line between Fitzroy and Pakenham townships, of upwards of 300 pieces of round and square timber, varying from 16 to 32 feet in length. The timber is to be delivered by the 1st of March, 1899.

It is reported to be the intention of the New Brunswick government to offer for lease all the Crown lands not yet licensed under the provisions of the twenty-five years' lease system. There are 4,000 square miles of such lands, much the larger portion in the northern part of the province, and some in Sunbury, Queen's and Albert counties.

The wholesale firm of Putnam & Pope, of Beverly, Mass., last week purchased 300,000 feet of hemlock boards from R. A. Estey and 3,000,000 shingles from the Phoenix mills, Fredericton, N.B. This is said to be the first sale of hemlock boards made by the Fredericton mill owners for over a year, and the manufacturers regard it as an indication of a brightening market.

The Manchester correrpondent of the Timber News, Liverpool, Eng., says: We fail to understand why one or two of our Liverpool friends should be so anxious to sell spruce deals at low figures, unless it may be that what they offer are inferior shipments, as most assuredly within a very short time spruce deals must harden in price. The present rush in the import is only likely to last a short time.

The tug Duncan City left Cheboygan, Mich., on August 26th, for the Georgian Bay, for a raft of 2,000,000 feet of logs. This, it is said, will be the last tow of logs to go to Cheboygan this season. The figures in the custom house at Cheboygan show the quantity of logs received from Canada this year to be about 54,000,000 feet. This is about one-half the average season's cut of the Cheboygan mills.

At the Crown Lands office, Fredericton, N. B., the following timber berths were sold recently: Two mile berth west of Lake George, York county, to John McMurray, at upset price; two and one-half miles east of mouth of Cain's river, to R. W. L. Tibbitts, at $8.25 per mile; three and one-half miles at head of main north branch of Jacquet river, to Sumner & Co., of Moncton, at $204 per mile.

Concerning the Manitoba lumber market, the Commercial says: Retailers will not have time to more than supply their requirements before the grain rush begins, after which there will be delay in securing the filling of orders. Prices are firm, and with no likelihood of lower quotations, and the prospects for a good fall trade, retailers can hardly make a mistake in securing a fair stock before the car shortage sets in.

The Timberman, of Chicago, states that Ernest J. Fawke, of Liverpool, England, and Alex. Fraser, of Toronto, Ont., have been negotiating for the establishment of an extensive wood-working and furniture factory in Cincinnatti. It is said that they have secured extensive areas of hardwood timber lands in the States of Michigan, Ohio and Kentucky, and that it is their intention to utilize the Michigan and Ohio resources at once.

The S. P. Benjamin Company, of Wolfville, have made the following shipments of deals this season: Bark Prince Patrick, one million feet, for Grangmouth; bark Salen, 900 M., for Newcastle-on-Tyne; bark Frimad, 400 M., for Ayr; bark Josra, 450 M., for Tralee. These vessels were all loaded at Horton Bluff. There are at present at the Bluff, bark Trio, loading 900 M., and Conductor, one million. There are also loading at Port Williams for South America, the bark Louva, 600 M., and Skoda, 675 M.

A public sale of pine and spruce deals was held on the 17th inst. by Messrs. Edmiston & Mitchells, of Glasgow, Scotland, with the following result: 1st Michigan deals 12/16x10/30x4 sold at 3s 2d per cubic ft.; 1st pine sidings 12/16x7/23x1½ at 2s 1½d and 1¼ in. at 1s 10½d; 1st pine ends 7x7/10x3 at 2s; 15 lots of 4th pine deals were put up without reserve, ranging from narrow to broad widths, and were hammered at from 7d to 8¾d per cu. ft., and a parcel of quartered oak 1 in. boards were disposed of at 2s 4d per cubic foot.

S. G. Parkin, of Lindsay, Ont., is reported to have purchased a large cedar limit in the townships of Monmouth and Cavendish. The limit was formerly owned by J. M. Irwin, and passed from him into the hands of a Peterboro bank. Mr. Parkin has not yet decided whether to place a couple of camps on the limit this winter or have the cutting done by jobbers. The timber from the new limits will be floated down the Burnt river. Mr. Parkin has also purchased a considerable quantity of shingle timber from M. M. Boyd & Co., of Bobcaygeon.

The brigantine Gabrielle is loading lumber at Montreal for Porto Rico, West Indies. The s.s. Wildcroft sailed last week for Quebec, where she will finish taking on her deck load of deals for Fleetwood. The s.s. Chatfield sailed on Sunday last from Pierreville, Que., for London, England, with a cargo of deals, consigned by Anderson, McKenzie & Co. The s.s. Cundall sailed from Montreal on August 28th for London, with a cargo of 1,100 standards of deals, consigned by the same firm. The s.s. Thomas Wayman, from Montreal to Glasgow, Scotland, sailed last week with 925 standards of deals.

Reviewing the timber market of Cork, Ireland, a correspondent says: The cargo per the Saerimner consists of planed boards, deals and box shooks, shipped by the Gravel Company, of Quebec. This is only the second cargo from these shippers landed here, and it will be interesting to see if the goods will supersede the same class shipped so extensively from Sweden and Norway. The Durwent Home has just arrived from Montreal and Three Rivers. The steamer has brought an assortment comprising oak, ash, elm, hickory, spruce deals and boards shipped by the well-known house of Messrs. Dobell, Beckett & Co. to Messrs. Eustace & Co.

Following are the average prices for reasonably large quantities of Canadian woods on the west coast of England:

| | Per Foot. |
|---|---|
| White pine, Quebec square wood | 1s 6d to 2s 9d |
| " " Waney board | 2s 0d to 3s 6d |
| Red pine | 1s 2d to 2s 6d |
| Oak, 1st quality | 2s 10d to 3s 9d |
| " 2nd quality | 1s 4d to 2s 6d |
| Elm | 1s 9d to 2s 1d |
| Ash | 1s 6d to 2s 3d |
| Birch, St. John | 1s 3d to 2s 3d |
| " Quebec | 1s 4d to 2s 8d |
| " Nova Scotia | 1s 0d to 1s 9d |
| Birch planks | 0s 9d to 1s 3d |

| | Per Std. £ s. | £ s. |
|---|---|---|
| Quebec pine deals, 3 x 11 and under: | | |
| 1st quality | 20 0 | to 25 0 |
| 2nd quality | 15 10 | to 17 0 |
| 3rd quality | 9 5 | to 10 10 |
| Spruce deals, St. John, &c., 7-in., 9-in., and 11-in | 6 7½ | to 7 0 |
| Spruce deals, Nova Scotia, &c., 7-in., 9-in., and 11-in | 5 17½ | to 6 7½ |
| Spruce boards, &c | 5 15 | to 6 10 |

## WINNIPEG LUMBER PRICES.

Following are the current retail quotations for lumber at Winnipeg. The mills quote delivered prices at Winnipeg and add the freight to outside points:

DIMENSION AND TIMBER.—No. 1, 2 x 4 to 2 x 12, 12, 14 and 16 ft. $18.50, 18 ft. $19.50, 20 ft. $20.50, 22 ft. $21.50, 24 ft. $22.50; 3 x 6 to 3 x 12, 4 x 4 to 4 x 12, 6 x 6 to 6 x 12 and 8 x 8, 12, 14 and 16 ft. $20, 18 ft. $21, 20 ft. $22, 22 ft. $23, 24 ft. $24; 8 x 10 to 12 x 12, 12, 14 and 16 ft. $22, 18 ft. $23, 20 ft. $24, 22 ft. $25, 24 ft. $26; 2 x 4, 10 ft. $20.50; 2 x 6 to 2 x 12, 10 ft. $18. No. 2 dimension, $2 less than No. 1. Dimension, 26, 28 and 30 ft., $26. Timber, 26, 28 and 30 ft., $28. $1 per M. advance on each inch over 12 inch in depth and width. Tamarac dimension same price as pine. Spruce dimension at $2 per M. less than pine. Cull plank, all widths, $12 per M. B.C. fir dimension up to 32 ft. $28 per M., 33 to 40 ft. $30, 41 to 60 ft. $36. $1 per M. extra for each 2 in. over 12 in. in width or depth.

BOARDS.—1st common red pine, $25, 2nd common $18.50, 3rd common $16.50; No. 1 cull $13, No. 2 cull $9; spruce, $16.50. $1 per M. extra for stock boards. $2 per M. less for 6 to 8 ft. and under. $1 per M. less for 10 ft. No. 1 box, 14 in. and up $30, No. 2 box boards, 14 in. and up $23. Extra dressing $2 per M.

SIDING, FLOORING AND CEILING.—2nd, 4 5 and 6 inch, white pine, $36; 3rd, 4, 5 and 6 inch white pine, $28; 1st and 2nd, 4, 5 and 6 inch red pine, $30; 3rd, 4, 5 and 6 inch red pine, $25; 4th, 4, 5 and 6 inch, red and white, $20; cull siding, red and white, $16; B.C. No. 1 and 2 edge grain flooring, 3, 4 and 6 inch, $32. $2 per M. advance for dressing both sides.

BEVEL SIDING.—No. 1 white pine, $26; No. 2 red and white, $23.

SHIPLAP.—Pine, 6 inch $18, 8 and 10 inch $20; spruce, 8 and 10 inch $19, 6 inch $18; cull shiplap, 8 and 10 inch, $17; do., 6 inch, $14.

SHINGLES.—B. C. cedar, per M, No 1, $2.75, No. 2, $2.50; B. C. cedar dimension shingles, $4; B. C. cedar dimension band sawed, $5.

LATH.—Pine lath, No. 1, per M, $3; No. 2, $2.50.

FINISHINGS.—1¼, 1½ and 2 inch—White pine, 1st and 2nd clear $65, 3rd clear $55, selects $45, shops $36; red pine, clear $40, selects $32; B. C. cedar clears, $50; do., over 12 inch, $55; B. C. fir edge grain No. 1 stepping $45, No. 2 $40; B.C. fir, flat grain, No. 1 $37, No. 2 do. $32.50; B.C. finishing up to 12 in., $37.50; do., over 12 in., $42.50. $5 per M advance on 2½ inch and thicker. One inch—White pine, 1st and 2nd clear, $55, 3rd clear, $48, selects, B, $38, selects, C, $30; red pine, clear, $40, selects, $30; B.C. cedar, clear, $50; B.C. fir finishing, $37.50; do., over 12 inch, $42.50.

OAK.—Red and White—¼ sawed, $85; 1st and 2nd, $55 to $65; common, $40.

MOULDINGS AND BASE.—Parting strips, 100 feet lineal, $60c; lattice, 1½ x 1½, 100 feet lineal, 75c, 1½ x 1¾, 100 feet lineal, 85c; window and door stop, 1½ inch lineal, $1.25; ditto, 2 inch lineal, $1.50; ½ round and ½ cove, 75c; 1½ inch mould, $1.50; 2 inch mould, $1.75; 2½ inch mould, $2; 3 inch mould, $2.25; 3½ inch mould, $2.50; 4 inch mould, $2.75; 4½ inch mould, $3; 5 inch mould, $3.25; 6 inch mould, $4; 5 inch window stool, 1¼, $4.50; 6 inch window stool, 1½, $5.25; 4 inch casings, $2.25; 5 inch casings, $2.75; 6 inch casings, $3.25; 8 inch base, $4.25; 10 inch base, $5; 12 inch base, $7; hand rail, 2 x 4, $5.50; wainscot cap, 2¼ inch, $2.35, 3 inch, $2.75; paper mould, 60c. Moulding made from 1¼ stock add 25 per cent; 1½ add 50 per cent. Hardwood mouldings or mouldings to detail at special prices. All shop work at special net prices.

The saw mill of Joseph Cawthorpe, and the cooper shop of James McKay, at Thamesford, Ont., were destroyed by fire on August 23rd.

## BUSINESS NOTES.

W. C. Hunter & Co., commission lumber dealers, Philadelphia, Pa., are reported to have assigned.

It is reported that Arch. Stewart, who operated a saw mill at Rapid City, Man., has absconded, leaving a number of creditors.

C. D. Chitty, of Ottawa, is said to have issued a writ in the High Court against McLaurin & McLaren, mill owners, claiming a commission of $1,900 for the sale of a timber limit purchased from Andrew McCormack.

The Howry firm, who it will be remembered operated a large saw mill at Fenelon Falls, Ont., and owned extensive limits on the Georgian Bay, but became financially involved, are announced to have again started in the lumber business in Wisconsin.

The failure of Graham, Horne & Co., Fort William, will not be felt severely in outside circles, as their miscellaneous liabilities are very small. It is said that their liabilities, outside of the Bank of Montreal's claim, will not exceed $2,000. The firm took but about ten million feet of logs last season, a considerable portion of which had been cut, and the balance will no doubt be cut this season. About 6,000,000 feet of lumber are in the yard.

## SHIPPING MATTERS.

The current freight rates on lumber from British Columbia points are as follows: To Sydney, 42s. 6d.; Melbourne or Adelaide, 51s. 3d.; Port Pirie, 50s.; Freemantle, 60s. to 62s. 6d.; Yokohama, 47s. 6d. to 48s. 9d.; Shanghai, 55s.; Tientsin, 57s. 6d. to 60s.; Valparaiso, f. o., 40s. to 42s. 6d.; U K. or Continent, 65s. to 67s. 6d.

B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2 20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R, writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct, Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30, 00 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $2.50; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 50c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $2.75; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4 25; under 50 M feet, $4.50; lath, 250 M pieces and over, 55c. per M pieces, under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3 00; under 50 M feet, $3 75; hardwood, 50 M feet and over $4.50; under 50 M feet, $4 75; lath, 250 M pieces, 60c.; under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.25; under 50 M feet. $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 65c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.; lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 10c per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber.'

## CANADIAN EXPORTERS AND WHOLESALERS

THOS. MEANEY & CO.
103 Bay Street - TORONTO
WANT 1" Black Ash Mill Run, or No. 1 and 2.

JOHN HARRISON
MANUFACTURER OF
PINE AND HARDWOOD LUMBER
Short and Long Dimension Timber, in Pine, Hemlock, Cedar or Rock Elm. Contractors Supplied. Inside Finish, &c.
Saw and Planing Mills: OWEN SOUND, ONT.
C. P. R. and G. T. R. Railways.

# THE NEWS.

—An examination for licenses as cullers was held at Huntsville, Ont., on the 25th of August.

—E. Cutler & Co., of Welland, Ont., has lately added considerable new machinery to his planing mill.

—Archibald Lindsay, of Aylmer, Que., has commenced the erection of a new saw mill, to cost $10,000.

—The board of examiners of cullers for the province of Quebec meets at Quebec on the 15th of September.

—The furniture store of Murray Crawford, of Campbellville, Ont., was destroyed by fire recently. The loss is $700.

—Thos. F. Bradley, of Ottawa, has entered into partnership with his brother at Glen Almond, Que., as lumber dealers.

—For stealing lumber from Wm. Mason & Sons, Ottawa, Moses Letteau was lately sentenced to six months' imprisonment.

—The British Columbia Mills, Timber and Trading Company are erecting a large warehouse at Winnipeg, to carry finished lumber.

—Dobbs & Craig, saw-millers, Dunchurch, Ont., have dissolved partnership, Mr. Dobbs retiring and Mr. Craig continuing under his own name.

—The Rainy Lake Herald says that should the railroad be completed to that place, a large lumber company at Chippeway Falls will build a saw mill there.

—It is reported that B. Clark, of Cypress River, has purchased the lumber business at Glenboro, Man., from J. B. Mathers, and will take possession in November.

—Capt. W. A. Jamieson, manager of the Ottawa mine at North Bend, B.C., was in Toronto recently purchasing machinery for a saw-mill to be built by the company.

—Messrs. Hurdman & Elmitt, wholesale lumber dealers, Ottawa, have established an agency at Russell, on the line of the new Ottawa and New York railway.

—Mr. James McKinlay, spool wood manufacturer, has removed his mill from Richibucto, N.B., to Red Bank, Miramichi, where he can obtain a greater quantity of timber.

—Jesse Brown, Hugh McDonald and Joseph Sutherland have formed a new co-partnership at Clyde River, N.S., under the name of the Clyde River Steam Mill Company.

—James Morrison, late with the S. C. Kanady Lumber Company, Toronto, has commenced business on his own account as a wholesale lumber dealer, with office at 552 Yonge street.

—Mr. R. W. Gibson, of Wolsely, Assa., has bought out the lumber yard and business of G. K. Grass, at Sintaluta. Mr. Grass will continue his repair shop and planing mill business.

—The tug Ainslee, owned by Maitland, Rixon & Co., saw-millers, of Owen Sound, Ont., was burned at South Bay, Manitoulin, whither she had gone for a raft of logs. She was valued at $10,000.

—It is the intention of Mr. J. R. Booth, of Ottawa, to connect his Nipissing timber limits by railway with the Ottawa, Arnprior and Parry Sound railway. A branch seven miles in length will be built.

—Mr. T. H. Steel, manager of the Utterson Lumber Co., of Utterson, states that his company will build a saw-mill on Horse Shoe Lake this fall, if the O. A. & P. S. railway will put in a switch at Falding.

—The temporary saw-mill erected by the Rathbun Company at Ashburnham is now in full operation. All the waste material, including slabs, is sent down to Deseronto. The locol manager is Mr. Callaghan.

—Kilgour Shives, of Campbellton, N.B., is shipping box shooks to the English market. Doherty's new saw-mill at the same place is nearing completion, and those of Richards and Stancliffe will be rebuilt this fall.

—An exchange states that the Thayer Lumber Company, of Muskegon, Mich., have lately put in improved machinery, by which 100,000 feet of lumber per day is produced by ten men. Formerly they employed sixty men.

—Mr. Frank Halliday, Crown Timber Agent, Parry Sound, Ont., reports that early in August fires were raging on both sides of the South Channel from Seven Mile Narrows to below the Crooked Narrows. They were caused by campers.

—Mr. V. L. Emerson, of Boston, is having erected in the yard of the W. C. Edwards Company, New Edinburgh, a retort for the manufacture of calcium carbide from saw-dust, and hopes to prove the feasibility of the scheme at an early date.

—The employees of the W. C. Edwards Company, Rockland, have again requested a reduction in the number of working hours from eleven to ten per day. It is said that they are not willing to accept any reduction in wages in consideration of the shorter day.

At the recent examination for license as cullers held at Hull, Que., the following were successful: Baxter Moore, Ottawa; J. Cousineau, Masson; Telesphore St. Jean, Gatineau Point; E. Dunning, East Templeton; G. Derby, East Templeton; J. Coghlan, Arnprior; Alf. Blondin, Ste. Adele.

—An order-in-Council has been issued authorizing Crown timber agents in the Yukon to issue yearly permits to cut cordwood and ties on certain defined areas of land under regulations made by the Minister of the Interior. The fee for each permit is $5, and the dues for timber cut are 50 cents per cord for wood and 6 cents for each tie.

—John Lewis & Sons, of Truro, N.S., manufacturers of peg wood, bottle tops, lasts, etc., have removed their mill to Sheet Harbor, where they have purchased a tract of 12,000 acres of timber. The firm is said to be one of only two in the world that manufacture peg ribbon for pegging machines. Their tops for ginger ale bottles are shipped to England, Ireland, Germany and other parts of Europe.

—September 9 has been chosen by the lumbermen of Omaha to entertain visiting lumbermen on the Trans-Mississippi Exposition grounds. An attractive program has been prepared, specially low railroad rates have been secured, and there is no doubt the occasion will be a notable success. A log-rolling contest on the lagoon, in which a number of the leading expert log-rollers of the country will take part, is one of the attractions.

—The Interior Department at Ottawa have taken steps to secure a large timber reserve on what is known as Turtle montain, in Manitoba. The reserve is to extend along the international boundary from the middle of range 18 west to the middle of range 23 west, and tapers up in a rough triangle to near the middle of township 2, including in all about 105,000 acres. Of this 41,000 acres belong to the C.P.R. and 5,000 acres to the Hudson Bay Company. The government is giving these companies land elsewhere in place of on that Turtle mountain, and selections are now being made in other parts of the province.

—New regulations for cutting timber on Dominion lands have been promulgated. The license fee is $5 per square mile, except for lands situated west of Eagle Pass, in the province of British Columbia, in which case the yearly ground rent shall be five cents an acre. The following crown dues will be collected: Sawn lumber, 50 cents per thousand; railway ties, eight feet long, 1½ cts. each; railway ties, nine feet long, 1¾ cents each; shingle bolts, 25 cents per cord, and 5 per cent. on the sales of all other products of the berth. A rebate of 40 cents per thousand feet will be allowed on lumber exported from British Columbia to places outside of the Dominion of Canada.

—The Ontario Forestry Commission, consisting of Messrs. Thomas Southworth, E. W. Rathbun, John Bertram and J. B. McWilliams, last month visited the limits of the Rathbun Company in the township of Hinchinbrooke, Frontenac county, to observe the effects of the plans for the prevention of forest fires, and to ascertain to what extent the land could be made available either for settlement or reforestry. The Rathbun limits have been under license practically since 1854, and it was a surprise to see the quantity of pine that is still standing. That so much pine should remain after many years of steady cutting is creditable alike to the lumbering methods of the Rathbun Company and to the judgment and careful supervision of Mr. Scantling, the manager of the company. Besides the pine in the Rathbun limits there is an abundance of hardwood. The latter will be utilized in supplying fuel to the charcoal iron-smelting furnace which will be "blown in" at Deseronto on the 1st of October. The iron works are owned by Detroit capitalists, but Mr. Rathbun has contracted to supply them with a million bushels of charcoal per year. This will be made from hardwood on the Hinchinbrooke limits.

—A correspondent gives the following particulars of logging in British Columbia: The main road is swamped out about twenty feet wide, the trees being taken out by the roots, powder being used for this purpose when necessary. Everything being cleared off, the work of laying skids commences next. They are laid every nine feet. These skids are twelve feet long and average about fifteen inches in diameter. They are sunk into the ground within about six inches of the top, or filled up, as the case may need. After this work has been done rock-apple gluts are inserted in the centre of the skids for the logs to run on, these being hollowed out so that the logs will follow on them. The road has to be corduroyed with cedar split about four inches thick. This means a great deal of work. When this is done the logs begin to move. The trees are sawn down and then cut into lengths to suit the trade, which ranges from twenty-four to one hundred and twenty feet. They are then barked and prepared for moving. Then the teamster comes along with his team and the logs are started on their journey. The greaser goes in advance of the team with a dish of grease, with which he greases the gluts. One day last week one team hauled thirty-six thousand at six turns.

## CASUALTIES.

—Jas. Day, a logger, stepped off a boom of logs at Gimbier Island, B.C., and was drowned.

—John Cordick, teamster for William Young, Wiarton, Ont., was killed by the breaking of the double trees on his wagon.

—Alfred Blackburn had his left arm torn from his body by coming in contact with a saw carriage in J. R. Booth's mill at Ottawa.

—A son of Mr. Lagace, foreman in Price Bros.' mill at Matane, Que., was recently killed by having his chest crushed in by a board.

—Alex. Crepin, teamster at J. R. Booth's mill, Ottawa, fell under the wagon wheels and was instantly killed. The accident was caused by the breaking of a neck-yoke.

—A fatal boiler explosion occurred in Chas. Best's sawmill at Sycamore, near Ridgetown, Ont., on July 17th. Chas. Best, the owner of the mill, and three others, were killed, and others seriously injured. Large portions of the boiler were carried over 400 yards.

## PERSONAL.

Mr. Robert Thackray, sash and door manufacturer, Ottawa, sailed from Montreal on August 6th for England.

Mr. P. C. Campbell, Crown timber agent at Sault Ste. Marie, was in Toronto recently on business with the Department.

The death is announced, in British Columbia, of Mr. John Crozier, formerly foreman for A. &. P. White, Pembroke, Ont.

Mr. Charles T. Higgins, who recently retired from a long service in the Ontario Crown Lands Department, died in Toronto last month, in his seventy-fourth year.

Hon. J. Sharples, M. L. A., head of the well-known lumber exporting firm of W. & J. Sharples, Quebec, has been elected as a representative of the shipping interests of the Board of Harbor Commissioners of that city.

On July 1, Prof. B. E. Fernow, chief of the division of forestry of the United States Department of Agriculture, resigned that office to assume the direction of the new State College of Forestry at Cornell University. A forest area of 30,000 acres in the Adirondack mountains has been allotted for purposes of demonstration. Prof. Fernow is recognized as well versed, and an expert in technical forestry, and should prove himself well equipped for his new field of work.

Mr. Wm. Murray, a member of the well-known firm of T. & W. Murray, Pembroke, Ont., died in that town last month, in his sixtieth year. During his life-time he had been prominently identified with the commercial welfare of Pembroke, and was also engaged quite extensively in lumbering, having large limits, and operating a number of general stores in different districts. As contractors, his firm carried to completion some important contracts, including the Pembroke waterworks. A resolution of condolence at his death was passed by the Board of Trade at Montreal, of which he was a member.

Mr. T. H. Sissons, manager at Winnipeg for the British Columbia Mills, Timber and Trading Company, has been entrusted with the responsibility of representing the company in Australia. Mr. Sissons left Winnipeg last month, sailing from Vancouver for Australia. He was accompanied by Mr. John Hendry, manager of the company, who, after establishing Mr. Sissons there, will return home again. The company have had a selling agent in Australia for some time, but hereafter they will have a direct representative in that part of the world. Mr. Geo. W. Campbell, who has been with the company for twelve years, succeeds Mr. Sissons as manager at Winnipeg. Mr. Campbell has had charge of the sales department at the Royal City mills, Vancouver, and is thoroughly familiar with the details of the lumber trade and the requirements of the Manitoba territory. The company intend to push their Winnipeg business.

## CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders.

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

## EASTERN CANADA AND EXPORT EDITION.

WRITE for advertising rates for the special "Eastern Canada and Export Edition" of this journal, to be published about the first of October. A copy of this issue will be placed in the hands of every lumber manufacturer in Quebec and the maritime provinces. A word to the wise is sufficient!

# WOOD PULP DEPARTMENT

## SITE FOR A PULP MILL.

RICHIBUCTO, N. B., is said to be very favorably situated for the manufacture of chemical pulp. Mr. F. Schield, in a recent communication, figures out the cost of building a pulp mill as follows :

COST TO BUILD A PULP MILL.

Building, including land, all foundations, chimneys, etc., $35,000 ; steam plant, including 4 boilers, 150 h.p. each, 110 lbs. pressure, steam pipe for heating and conducting steam to digesters, engines and paper machines, including all valves, gauges, etc., $20,000 ; power plant, including boiler feed system steam engine at 340 H., condenser dynamo with small engine and all wires, $14,000 ; transmission of power, including all shafts, pulleys, gears, bearing and belts, $10,000 ; water, including pumps, water pipes, valves, tanks, etc., $10,000 ; wood room, including saws, barkers, splitters, chipper, sorting arrangement and conveyors to digesters, $15,000; digester room, containing bins to hold the chips for digesters at 6 tons capacity each, lined, with all the gauges, pipes and other appliances, vats to empty the fibre into, $50,000 ; paper machinery, including pumps, conveyors to transport the cooked fibre, 2 openers, vat, screens, 2 paper machines, etc., $30,000 ; acid making, including towers, sulphur or pyrites for acid tanks, pumps and pipe linings, $10,000 ; small machine shop and carpenter shop, $5,000 ; total, $200,000.

A comparison is given between the cost of manufacturing one ton of pulp in the United States and in Canada, as follows :

IN THE UNITED STATES.

| | |
|---|---|
| 2 cords of wood | $12.00 |
| 300 lbs. sulphur | 2.75 |
| ½ ton limestone | 75 |
| 1½ tons coal | 3.75 |
| Labor | 10.00 |
| Freight on pulp | 3.00 |
| Maintenance of plant, etc. | 5.00 |
| Total | $37.25 |

IN CANADA.

| | |
|---|---|
| 2 cords of wood | $4.00 |
| 300 lbs. sulphur | 2.25 |
| ½ ton limestone | 50 |
| 1½ tons of coal | 3.75 |
| Labor | 8.00 |
| Freight on pulp | 4.00 |
| Maintenance of plant, etc. | 6.50 |
| Total | $29.00 |

The above shows a difference in favor of Canada of $8.25 per ton, which equals $57,750 per annum, or about 28 per cent. on $200,000. Fibre in England is worth from $35.00 to $55.00 a ton, according to quality. There is an unlimited demand. The failure of many pulp mills in the United States is claimed to be due to a lack of knowledge on the part of the management.

---

The Acadia Pulp and Paper Mills Company are about to build a dam across the outlet of the La Have Lake. The dam will be 600 feet long and eight feet in height at the deepest point. The purpose is to raise the water by six feet and reserve the extra water for use at the pulp mills at New Germany, N.S., during dry spells. At present these mills have to be closed down for two or three months for want of water.

## OBSTACLES TO THE DEVELOPMENT OF TRADE.

THE High Commissioner for Canada has forwarded to the CANADA LUMBERMAN a copy of a communication received from the Darwen Paper Mill Company, Limited, Darwen, Eng., which speaks for itself :

DARWEN, July 25th, 1898.

DEAR SIR,—With reference to your letter of the 18th instant, we beg to say in reply, that we have fairly large contracts for Canadian wood pulp over the next twelve months. The principal objections to an increase of the business are :

(1) That the pulp is not packed as well as that from Scandinavia.

(2) The pulp is supposed to contain 50% moisture. We find from actual working that this cannot be relied upon, and the consequence is frequent disputes between the parties concerned. Regularity in this respect is of great importance, and we naturally prefer to do business where this annoying feature is not present.

Large Canadian mills seem determined to adapt themselves to the English business, but in view of the lower prices of pulp from Scandinavia it is doubtful whether the Canadians will care for the business at the low prices which will doubtless prevail next year.

We should like to hear what prospects there are in Canada of a duty being put on timber for pulp making passing into the United States. You will remember that we expressed an opinion that this would help to foster Canadian industry with this country.

Yours truly,
(Sd.) J. E. CROFT,
For the Company.

## PULP MILL AT EAST ANGUS.

THE Royal Paper Mills Company have extensive paper, pulp and saw mills at East Angus, Que. The saw and pulp mills have both been completed within the past year, and are modern in every respect. They are situated across the river from the large paper manufactory.

The saw mill is 36×126 feet, with an ell 24×36 feet. The power is furnished by two large water wheels. It is substantially built, and rests upon solid masonry. In the basement are the water wheels and the shafting, also the pumps that supply the reservoir on the hill above the pulp mill at an elevation of 100 feet. From this reservoir an eight-inch pipe is laid to the pulp mill, giving a water pressure of forty pounds to the square inch. This pipe feeds a system of hydrants that affords protection from fire. The first floor is devoted to clapboard sawing and planing, and to the cutting and screening of chips. The second floor is where the lumber is cut. One circular saw here makes an average of 80,000 feet in twenty-two hours of each day, and is the fastest machine of its kind in Canada. On this floor is a planer and a flooring machine, and also the machines that take the bark from the slabs, which are exclusively used for pulp wood.

There are three carriers run by machinery between the saw mill and the pulp mill. One carries the chips out of which the pulp is made, another the saw-dust and shavings to the furnaces, and a third the slabs and edgings also to the furnaces.

In the pulp mill, the boiler house is 63×94 feet in size, and contains six steam boilers, a rotary furnace for reclaiming soda ash, and a Yar-Yan evaporator. There is here, also, the steam engine which furnishes the power for the pulp mill. The room where the caustic liquor is made is 29×78 feet. It contains 12 iron tanks, 10 feet in diameter and 12 feet high, standing on solid masonry.

The washing room is 61×78 feet. It is a model of convenience, and plenty of storage for liquor, ample stuff chests and eight washing pits. Everything in this room rests on masonry. The pumps are all in line in this room. There are four large digesters in the digester building, which is 35×55 and 70 feet high, the upper part making an ample storage for chips. The finishing room is 108×43 feet. It now contains one machine, and a second one is to be put in. There is also a shipping room, 60×43, and a room for the storage of soda ash, 48×43 feet.

The capacity of the mill is 16 tons of dry pulp per day. It is the intention of the company to put in another Yar-Yan evaporator, another rotary furnace, another digester and a wet machine, which will bring up the capacity of the mill to about 20 tons per day. For these purposes the company asks for subscriptions for their capital stock to the extent of $25,000.

## PULP NOTES.

The Sault Ste. Marie Pulp Company have been making some improvements to their grinders.

Kidd & Riley, of Sarnia, Ont., are taking a considerable quantity of pulp wood from Manitoulin Island, in Lake Huron, this season.

It is expected that the new English company which has taken over the pulp mill at Sturgeon Falls, Ont., will have it in working order by October 1st.

It is said that Mr. Mernier, owner of the Island of Anticosti, intends erecting a pulp mill on the island. He recently visited the extensive mills at Grand Mere.

The Riordan Pulp Company have commenced the erection of a pulp mill at Hawkesbury, Ont. The mill will be eight stories high, covering an area of about three acres of ground.

It is stated that certain Toronto parties will erect a large pulp mill in the near future at Escuminac, near Carleton, in the Baie des Chaleurs, the proposed output being 100 tons per day.

Mr. T. R. Allison, pulp mill designer, who built the Masterman pulp mill at Chatham, N. B., has been engaged by Messrs. John Bertram & Sons, of Dundas, Ont., to superintend the building of pulp machinery.

The new pulp mill at Mispec, near St. John, N.B., is nearing completion, and some of the machinery, manufactured by Messrs. John Bertram & Sons, of Dundas, is now being installed. Mr. B. F. Mooney is manager.

Mr. R. Cullen, superintendent of the sulphite plant in the Riordon paper mills, Merritton, Ont., has gone to Hawkesbury, Ont., to superintend the erection of the mills to be established there by the Riordon Pulp Company.

The Chicoutimi Pulp Company shipped no less than a thousand tons of pulp to England by the steamer Manchester Trader. The cargo was taken to Quebec by 29 cars of the Quebec and Lake St. John railway and seven schooners.

The Miller Brothers Company, a Montreal concern, will shortly ask for a Dominion charter, to manufacture paper, wood and straw pulp, etc. The capital will be $300,000. W. T. Miller, of Montreal, and W. S. Miller, of Glen Miller, Ont., are interested.

A representative of a large Hamburg firm, it is said, has made arrangements for the transmission of the entire product of the Chicoutimi pulp mills from Quebec. The pulp will be taken to Quebec, partly by cars and partly by sailing vessels, and will be forwarded by steamers every fortnight.

The Shawenegan Water and Power Co., which has been incorporated to develop and utilize the water power at Shawenegan, Que., will not manufacture pulp at present, it has been decided, confining itself to the production of power. The incorporators of the company are : David Russell, Montreal ; John Joyce, Boston ; William Strachan, Montreal, and others.

The making of wood into wood pulp and thence into paper set inventors thinking, and a result is the discovery of the transformation of wood fibre into strong and handsome cloth. The wood is boiled, crushed, and the fibres separated into parallel lines, dried and spun, the same as cotton or wool. Oak, hickory and locust make a very handsome cloth, while bamboo produces one which is almost iron-like in its strength and elasticity. The cost of the new process is not large, but is still a little above that of converting cotton or linen into substantial tissues.

## A GOOD SALES AGENT.

THE value of the CANADA LUMBERMAN as an advertising medium for manufacturers of machinery and appliances adapted to the requirements of saw and planing mill operators, is well known to those who have given it a fair trial. For the benefit of persons who have not made a test of our advertisement pages, we may be permitted to repeat the statement recently made to our representative by the manager of the Canadian Locomotive and Engine Co., Kingston, Ont., that as a direct result of the publication in the LUMBERMAN of a description of the Drake saw-mill machinery exhibited by the company at the Toronto Industrial Exhibition last year, they made a sale of five machines to one firm.

## CANADIAN SPRUCE.

In regard to whitewood an impression seems to prevail in some quarters that owing to the high freights from the spruce ports, shippers in the Baltic will be able to maintain prices. These people, however, lose sight of the fact that a large proportion of the lower port spruce comes here on consignment, and is thrust into the public sales as soon as it arrives. If the market is well stocked the mere fact of its having cost more to bring it here will not influence buyers. Good class wood has already shown a stronger tendency on that account, but this elevation has been confined as yet mostly to the spot market, and in a lesser degree on contract goods of specially favored makes. We believe that if the shipments to this country are fairly moderate spruce prices will recover, but the advance in freights is not in itself a guarantee of this desired result. No doubt there is a big future for the Canadian wood market, and we can see no earthly reasons why a lot of the best descriptions of spruce should not be planed up, for flooring purposes, for which, in our opinion, much of it is serviceable. A cargo of well-assorted spruce flooring would be the precursor of hundreds to follow, and it only requires the ball to be once set rolling for a large trade to develop itself. In our last impression we drew attention to the possibility of the high freights checking the supply, and there were certain grounds for hoping that the importation this season would not overtake the demand, as probably the spruce people will hesitate to consign with doubtless prices here and an increased freight to lessen the chance of profit.—Timber Trades Journal.

The Dominion government are making a forestry exhibit at the Omaha Exposition, one of the features being a pine slab six feet across. The tree from which the slab was taken measured 150 feet to the first limb.

The attention of pulp and paper mill proprietors is directed to the advertisement in this issue of the City Brass Foundry Company, of Hamilton. This company manufacture phosphor bronze castings, which they claim will resist the action of chemicals in a manner greatly superior to that of any other metal, and hence the adaptability of their castings for use in pulp and paper mills. They have recently completed at their works a casting weighing 1,450 pounds for the Cornwall paper mills, and are prepared to turn out bronze castings of any desired size and weight.

## TORONTO'S GREAT EXHIBITION.

On August 30th Canada's Great Exposition and Industrial Fair opens at Toronto. It is no idle boast to say that the arrangements made for this year guarantee that the Exhibition will be easily the best ever held. Owing to the war, amusement matters have been very quiet in the United States. As a consequence the management have been able to secure special features that otherwise could not have been obtained. Nor is that all, for the exhibits are of a great deal better quality and more varied than usual. For the first time manufacturing establishments of both France and Great Britain are sending over collections of goods especially made for this purpose, included in them being several recent scientific inventions of a revolutionary nature. Two great spectacles are to be given, one, which will be free, by day, and the other by night. The first will be an illustration of real warfare, and will be conducted by the Royal Engineers, of Halifax, and the Dominion Artillery, of Kingston, and will comprise the exploding of submarine mines, the blowing up of ships, the storming of forts with shot and shell from quick-firing and Maxim machine guns, Red Cross hospital work and so on. At night the great spectacle presented will include the blockade, bombardment and surrender of Santiago, the sinking of the Merrimac, the captive balloon, and the destruction of Cervera's fleet, concluding with a joyful celebration of victory. An exhibit of horseless carriages will be a feature of interest, while the bands of music will number a score, including three or four from the United States. On the whole there is more to be seen at Toronto for less money than at any fair in America, and such an opportunity as the present, when rates prevail on the railways that may never be so low in another year, should not be missed.

## TRADE NOTES.

The Dodge Manufacturing Company, Limited, has succeeded the Dodge Wood Split Pulley Company, of Toronto.

Mr. Carl Zeidler, of Toronto, has been appointed Canadian representative for Messrs. Beck & Pollitzer, licensed wharfingers, forwarding and insurance agents, etc., London, England. This firm have large premises in London, and are in a position to quote low freight and through delivery for goods.

Later reports show that the damage to the works of the Jenckes Machine Co., at Sherbrooke, Que., by fire on the night of the 13th of August, was very much exaggerated. The fire was confined to the machine shop building, and the other departments, foundry, boiler shops, etc., were in operation as usual on the following Monday. A few days later a portion of the machine shop was started up, and the whole was in running order by the 23rd of August. The patterns, drawings and office records were preserved practically intact, and all orders for work are being accepted as usual. The principal item requiring replacement is the roof of the machine shop; this, however, is well under way. The whole of the work is being pushed with much energy, and the numerous orders in hand will suffer comparatively slight delay.

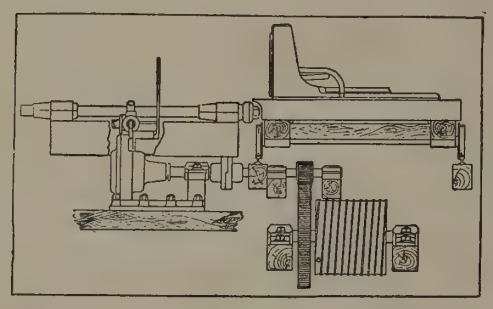
We are advised by Mr. Madison Williams, successor to Paxton, Tate & Co., Port Perry, Ont., that Messrs. H. R. Williams & Co., 345 and 347 St. James street, Montreal, have been appointed selling agents for his turbines, machinery, etc., for the city of Montreal and vicinity. Messrs. Williams & Co. are thoroughly acquainted with the various lines of machinery, and the addition of the well-known manufactures of Mr. Madison Williams should prove of great advantage to their present customers, and be an inducement to new buyers of mechanical goods. Mr. Williams reports the following recent orders: One 15¼" Vulcan turbine, for globe case, to Acadia Powder Co., Halifax, N.S.; one steel flume for Carveth & Cornish, Leskard, Ont.; two steel and cast iron draft tubes to Summerfeldt Bros., Sutton, Ont.; one Lane circular saw-mill, with 25 ft. carriage and independent rope feed, to W. H. Keeley Lumber Co., Buckingham, Que.; one 30½" Leffel turbine to W. P. Widdifield, Siloam, Ont.; one 48" Leffel turbine to Jos. Beausoliel & Son, St. Felix de Valois, Que.; three 61" Vulcan and one 35" Vulcan turbines to the Monastery of the Good Shepherd, "Moulin de Crochet," Parc Laval, Que., and one 40" Leffel turbine to D. T. Creswell, Apple Hill, Ont., supplied through W. & J. G. Greey, Toronto. Mr. Williams also reports numerous enquiries from all parts of the Dominion.

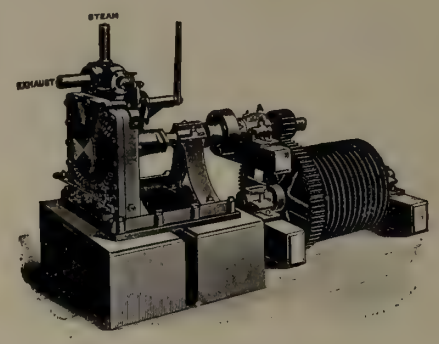
## PUBLICATIONS.

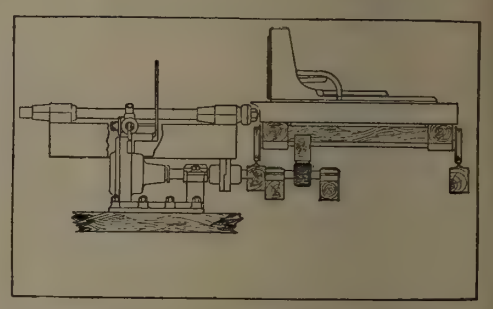
The Canadian Manufacturers' Association have begun the publication of a Bulletin, to be issued monthly, or oftener, as occasion may require, which will contain considerable information regarding the possibilities of the export trade of Canadian manufactures. This information is obtained from the Dominion Department of Trade and Commerce, and from the publications issued by the British and United States governments, and other reliable sources.

Cassier's Magazine for September contains, among others, the following articles: "General Distribution from Electric Central Stations by Alternating Currents," by Herbert A. Wagner; "The Cyandine Process of Treating Gold Ores," by Dr. Joseph W. Richards; "Speed as an Element of Warship Design," by Passed Assistant Engineer Walter M. McFarland, U.S.N.; "Projectiles for Modern Naval Ordnance," by Professor Philip R. Alger, Bureau of Ordnance, U.S.N.

Mr. N. D. Seaman's saw and shingle mills in Keppell Township, near Owen Sound, Ont., were destroyed by fire on Sunday, 14th inst. The loss is $3,000, with no insurance.







The DAKE STEAM FEED

Embodies the following Advantages:
SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED, CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accomodating the speed of the feed to the size of the logs.
Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

For over 50 years we have been building a reputation for High Class Machinery. Our Mills and Machinery extend, in Canada, from the Pacific to the Atlantic—Newfoundland, Central and South America, New Zealand, Australia, Austria, Roumania and the far east. Our aim is ever to produce the Best, not the Cheapest, with the invariable result that where we receive one order others follow quickly. Our new works, occupied in 1896, give us the much needed room for expansion, coupled with the most modern facilities for economic production and prompt shipments. If you belong to the minority who do not know us, let us become acquainted.

# R. H. SMITH CO., LIMITED

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

## Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

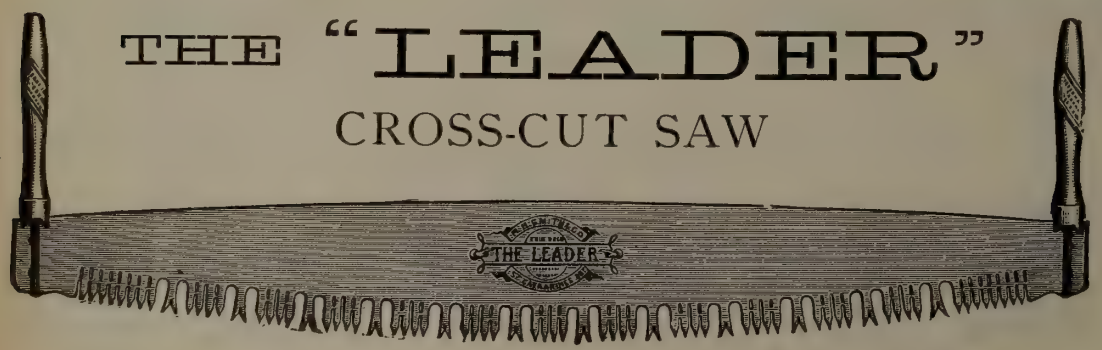
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.

## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## THE "LEADER" SAW SWAGE

## MODERN LUMBER DRIERS

The dry kiln of to-day is born of the desire of manufacturers of lumber to make a short cut from the tree to the consumer. Much thought has been devoted to the subject of drying lumber quickly; many theories have been advanced, and some degree of success, in many instances, attained. In one instance only, however, has absolute, unqualified correctness of theory been demonstrated in actual, every-day practice. Success has crowned our efforts, and

## The Standard Improved Compression Dry Kiln

Stands **alone** to-day, the embodiment of the **only** correct principle of drying green lumber artificially. It is the **only** kiln which will dry **every board** from the top course to the bottom, and from the sides to the centre of the pile, **quickly, thoroughly** and **evenly,** leaving them bright, straight and stainless—perfect lumber.

This is the **only** kiln in which heavy, cast-iron headers, and "made-to-order" pipes and fittings are used. They cost more than the common kind, and are worth more, but are none too good for the "Standard," in which every inch of material and every detail of construction is of the most exacting quality.

**Moist Heat,** absolutely controlled in every part of the drying room, is the drying agent employed in this kiln.

Elaborate, illustrated Catalog for the asking.

REPRESENTATIVE SPRUCE EXPORTERS OF EASTERN CANADA

# Province of Quebec

As early as 1667 timber is said to have been shipped from Quebec to Europe, and in 1735 Lieutenant Hocquart is reported to have sent timber and boards to Rochefort, but it was not until the beginning of the present century that timber was exported to England to any extent. The trade grew rapidly, and for a few years as many as 1,350 square-rigged vessels entered the St. Lawrence river annually to load timber. In the year 1864 over 20,000,000 cubic feet are credited as having been exported, since which time there has been a remarkable falling off. At one time the shipbuilding and other timber operations at the port of Quebec gave employment to over 8,000 laborers, 40 to 50 ships being built in a year. To-day the lumbering industry of the province is still flourishing, but may be said to be divided into three branches, the pine trade, the spruce trade, and the square and waney timber trade.

Much of the Ottawa valley product, almost exclusively pine, is loaded on the ocean steamers at Montreal for export, while a few years ago the great shipping point was Quebec. Last year there were exported from the port of Montreal lumber to the value of over $5,000,000, the principal shippers being Messrs. Dobell, Beckett & Co., W. & J. Sharples, R. Cox & Co., J. Burstall & Co., McArthur Bros., Watson & Todd, E. H. Lemay, and the Export Lumber Company. It is expected that the total for this year will be somewhat less, owing to the depression in some of the foreign markets. The pine forests of the province are not extensive, being confined chiefly to the Ottawa and St. Maurice districts.

We now come to a consideration of the spruce industry, which is rapidly growing. In her spruce forests the province of Quebec possesses a valuable asset, and one which, in process of development, will enrich the community at large. Spruce timber predominates in the St. Maurice, Saguenay, Lake St. John, Rimouski, Bonaventure and Grandville agencies, in nearly all of which districts saw mills have been and are being established. It is believed by explorers, however, that extensive tracts of spruce timber are to be found in northern districts yet unexplored.

The spruce deals of Quebec are shipped largely to the British market, from the ports of Three Rivers, Sorel, Batiscan, Quebec, etc. There are several well equipped mills manufacturing spruce, and importers desirous of contracting for stock should meet with no difficulty in securing the carrying out of the specifications. For the benefit of readers in foreign countries, we give below the names and addresses of some spruce manufacturers in Quebec :

Quebec has continued to hold its timber trade, although much of the timber loaded there is cut in Michigan and Ohio. In the case of square oak, several firms have manufactured it in the State of Arkansas, and rafted it to Quebec, a distance of about 1,000 miles. Some of the waney pine comes from Michigan. There are located in the city of Quebec several shippers who are not manufacturers. These include Messrs. W. & J. Sharples ; J. Burstall & Co.; Dobell, Beckett & Co.; Harold Kennedy ; McArthur Bros. Co.; Bennett & Co.; H. R. Goodday & Co.; Dunn & Co.; W. H. Wilson ; D. R. McLeod, and Benson & Co.

Saw Mill of the Tourville Lumber Mills Company at Louisville, Que.

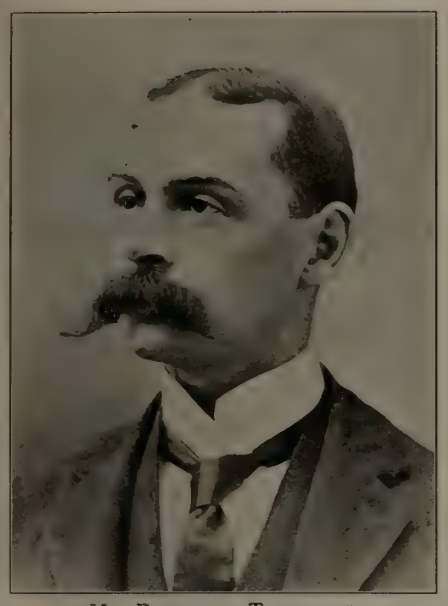
Concerning the steamship "Pearlmoor," shown in the accompanying illustration, Messrs. W. & J. Sharples say : "It was loaded by us for Greenock, Scotland, and is the first turret steamer to carry timber from Quebec. Her cargo was as follows : Timber, 4,183 loads; deals, 94 p.s.h.; ends, 62 p.s.h.; boards, 34 p.s.h. Total cargo, 4,810 loads. She was commanded by Capt. C. C. Bruhn, and the stevedore was Daniel Griffin. Her net register tonnage is 2,226 tons, and she sailed from Quebec 17th August and arrived at Greenock September 3rd, 1898."

### THE TOURVILLE LUMBER MILLS CO.

Among the leading manufacturers of lumber in Quebec province is the Tourville Lumber Mills Co., with headquarters in the Imperial Building, Montreal, and large saw mills at Louiseville, Pierreville and Nicolet, P. Q. This concern was originally established in the year

Steamer "Pearlmoor," Loaded with Timber at Quebec by Messrs. W. & J. Sharples.

1880 under the style of Tourville & Co., the co-partners being Hon. L. Tourville and Mr. Joel Leduc. In 1891 the important interests were duly organized and incorporated under the present title, with a paid-up capital of $250,000, thus rendering the corporation one of the most extensive of its kind in the Dominion. About two years ago Hon. L. Tourville, president of the company, died, necessitating a slight reorganization, and the officers now are:



Mr. Rodolphe Tourville.
President Tourville Lumber Mills Company.

Rodolphe Tourville, president; Nap. Gill, vice-president; Edouard Ouellette, manager; and Arthur Tourville, secretary-treasurer. The company own large timber limits in the province, cutting much of the finest timber that is marketed. They have built three of the largest and most completely equipped saw mills, located respectively at Louiseville, Pierreville and Nicolet. These mills have numerous gangs of saws, and all the best arrangements for the economical handling of logs and lumber, and have an enor-

Mr. Arthur Tourville,
Secretary-Treasurer Tourville Lumber Mills Company.

mous annual capacity. About 175 men are employed in the Louiseville mill, 200 in that at Pierreville, and 60 in the Nicolet mill. The cut consists of good grades of white pine, spruce and hemlock lumber, which is exported to the United States and European countries. The company own extensive timber limits, handle 35,000,000 feet of lumber annually, and ship direct by cargo from their mills. It is one of the most representative concerns in the lumber trade of the province, and is worthy of the great success achieved. Portraits of Messrs. Rodolphe Tourville, president, and Arthur Tourville, secretary, and a view of the Louiseville mill, appear herewith.

## ST. MAURICE LUMBER COMPANY.

Located at Three Rivers, Que., at the mouth of the St. Maurice river, which drains an area of 16,000 square miles of timber lands, are the large saw mills of Alex. Baptist, Warren Curtis, and the St. Maurice Lumber Company. The officers of the latter company are: Wm. McEchron, president; G. F. Underwood, vice-president and manager; and N. B. Sprague, secretary-treasurer, all of Glen Falls, N. Y., where they are interested in the Glen Falls Pulp and Paper Company.

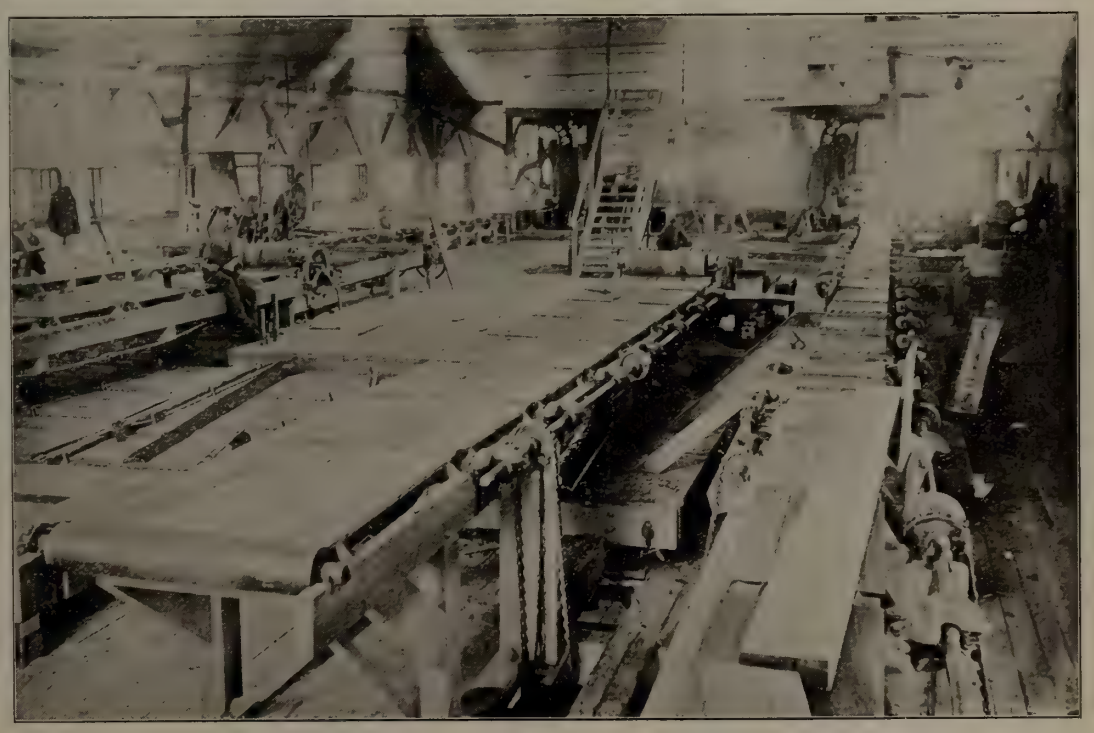
Saw Mill of the St. Maurice Lumber Company at Three Rivers, Que.

The St. Maurice mill, which is under the local management of Mr. Robert F. Grant, contains two band saws, two edgers, two resaws, one lath mill, and six machines for barking spruce slabs, the machinery being supplied by the Waterous Company, of Brantford. The capacity of the mill is 160,000 ft. b.m. per 24 hours, and they have been running day and night all summer. The cut this season, when finished, will be about 26,000,000 ft. b.m., manufactured chiefly into 3-inch deals, pine and spruce. The logs are made on streams in the St. Maurice territory and driven down the St. Maurice river to Three Rivers. Exterior and interior views of the mill are shown.

## H. R. McLELLAN.

The lumber property acquired by Mr. H. R. McLellan is situated at St. Margaret's Bay, one hundred and sixty miles from Rimouski, on the St. Lawrence river. The mill is located at the mouth of the river, facing on a basin of water which will hold eight million feet of logs. The basin, about one mile square, has twenty feet of water, and fifteen on the bar at low water. The river extends two hundred and fifty miles due north, and the surrounding country is densely crowded with spruce timber of a magnificent size, which will run three logs to the thousand feet.

The mill, which has recently been completed, is fitted with a Carrier, Laine & Co. double saw, rotary, re-sawing machine (for boards, with a capacity of about twelve thousand per day), two planers, double edger and clapboard machines.



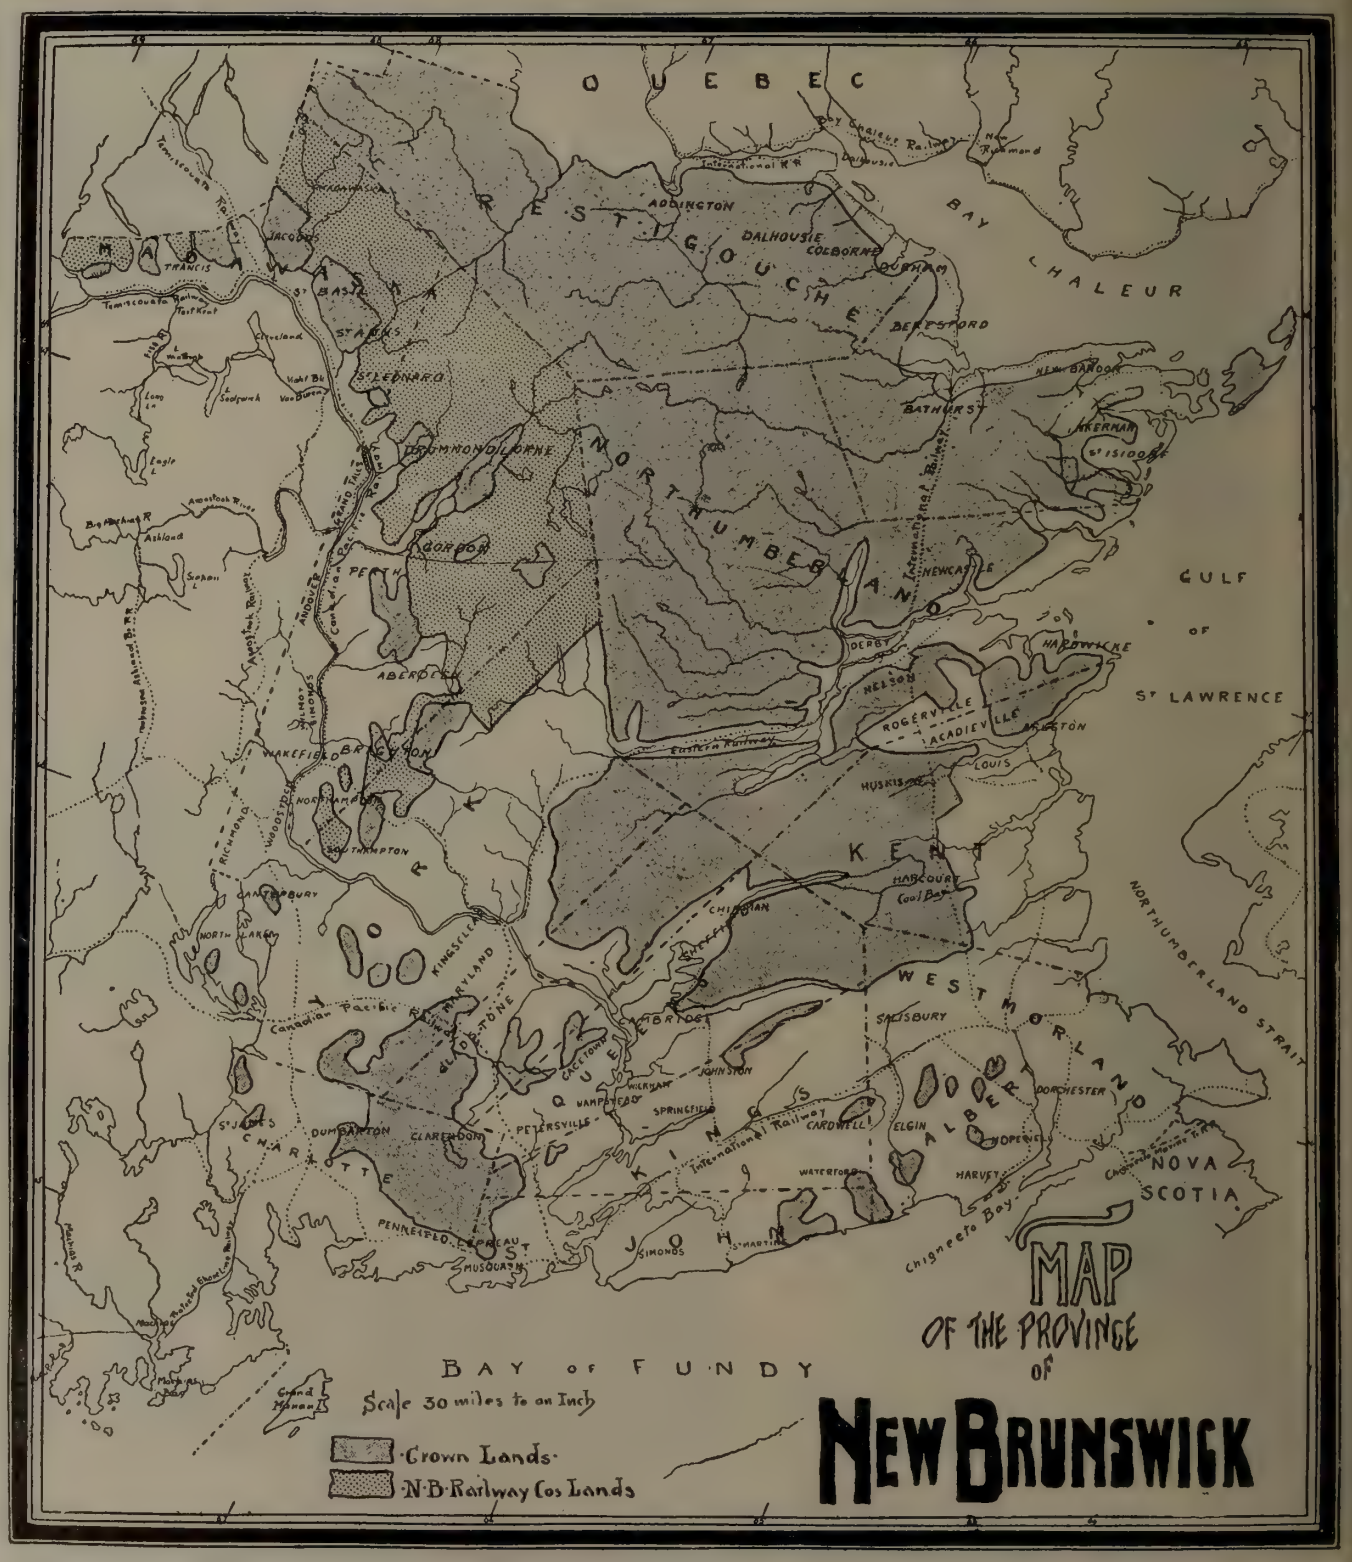
Interior View of St. Maurice Lumber Company's Mill, Three Rivers, Que.

## PULP MILL AT PARRSBORO.

The town council of Parrsboro, N. S., has decided to grant a bonus of $10,000 to secure the erection in that town of a sulphite pulp mill of thirty tons capacity daily. Mr. Thos. Allison, the well-known pulp mill designer, has made a report to the town, in which he states that the site is an excellent one. Parrsboro is an open port, which permits of shipments being made to all countries the year round. Abundance of wood can be secured, and coal can be put into the boiler house as required at a cost of one dollar per ton, thus doing away with the necessity of keeping a large supply in stock. In view of these favorable conditions, the offer of the town will no doubt be taken advantage of.

# Province of New Brunswick

NEW Brunswick, which was made a distinct province in 1784, occupies that part of the Dominion of Canada situated nearest Great Britain. The port of Chatham, on the Miramichi river, is nearer to Liverpool than any port of importance on the mainland of America, the distance by the shortest route, via Belleisle, being about 2,430 miles, whereas Halifax, in Nova Scotia, is distant 2,450, Quebec 2,633, and New York 3,105 miles. The province embraces about 28,000 square miles of territory, equal to 17,920,000 acres. Of this perhaps 12,000,000 acres are timber lands, divided as follows: 1,647,772 acres held by the New Brunswick Railway Co.; 4,500,000 acres under license from the Crown by lumber operators; 3,000,000 acres still held by the Crown, and less extensive tracts owned by Messrs. Alex. Gibson, Nova Scotia Land Company and others. The lands owned by the Crown and the New Brunswick Railway Company, as well as the private property, are shown by the accompanying map. Among the largest holders of Crown timber tracts are the following: Samuel Adams, 304 square miles; Robertson & Allison, 204; George Burchill, 129; A. H. Campbell, 448; Alex. Gibson, 172; Hale & Murchie, 154; G. G. King, 104; Geo. Moffatt, 271; J. P. Mowat, 79; Estate Hugh McLean, 195; McLeod & Atkinson, 77; C. & J. Prescott, 60; W. C. Purves, 50; A. F. Randolph, 101; Randolph & Hale, 70; David Richards, 185; Wm. Richards, 254; Allan Ritchie, 247; James Robinson, 125; Kilgour Shives, 235; E. Sinclair, 170; Daniel Sullivan, 140; George J. Vaughan, 111; Edward Walker, 72; J. B. Snowball, 466; G. K. McLeod, 54; I. R. Todd, 92; Alfred West, 47; Sumner Co., 84; Sumner Co. and Clark, Skillings & Co., 82; W. E. Skillings, 170; Maritime Sulphite Fibre Co., 80 square miles. Some of the above timber berths are owned by persons who have not operated them, but, having every faith in the future value of timber, are holding them for speculative purposes.



The province of New Brunswick is well watered, affording excellent facilities for floating logs to mill points, although, of course, occasionally a dry spring and light fall of snow in the winter cause logs to be hung up. Spruce is the predominating timber, a very large quantity being taken out each year for export and for the manufacture of pulp. There have been established in New Brunswick within late years some extensive pulp mills, two being at Chatham. Pine is not found in that province in abundance. Other native woods are cedar, maple, birch and hemlock, with small quantities of other timber.

By the regulations of the Crown, timber lands are leased for the term of 25 years, at the upset price of $8 per mile, or such greater sum as may be offered at the public sale. The stumpage dues on spruce, pine or hardwood logs are one dollar per thousand superficial feet; on pine timber up to 14 in., one dollar per ton, with 25 cents for each additional inch; spruce timber, 50 cents per ton; hardwood timber, 90 cents per ton; cedar logs, 80 cents per thousand. It is difficult to arrive at an estimate of the total annual cut of timber. The following, taken from the last government report, shows the quantity and character of the timber cut on Crown lands for the year ending October 31st, 1897:

Spruce and pine logs, 102,841,781 sup. ft.; hemlock logs, 2,246,104 sup. ft.; cedar logs, 11,239,208 sup. ft.; hardwood logs, 3,711,761 sup. ft.; hardwood timber, 164⅝ tons; pine timber, 345 tons; spruce timber, 7 tons; cordwood, 463½ cords; hemlock bark, 119⅜ cords; shingles (sawed), 7,300 M.; railway ties, 98,430 pieces; cedar posts, 9,000 pieces; spruce poles, 400 pieces; telegraph poles, 494 pieces; boom poles, 9,825 pieces; brackets, 3,400 pieces; knees, 60 pieces; wier poles, 1,000 pieces; spruce spars, 35 pieces; piling, 125 pieces; piling, 4,340 lin. ft.; cedar rails, 1,500 pieces; fir logs, 1,022,392 sup. feet.

Saw Mill of Kilgour Shives at Campbellton, N.B.

The above represents but a small proportion of the timber cut, as last year the trans-Atlantic shipments alone were given by Hon. J. B. Snowball as 494,000,000 feet. We give below the names of some manufacturers throughout the province who have given attention to the export trade:

At the great saw-milling centre of St. John, several United States firms have extensive mills, sawing almost exclusively for the Eastern States trade, and obtaining their log supply from the state of Maine. These include E. D. Jewett & Co., S. T. King & Sons, Miller & Woodman, Stetson, Cutler & Co., J. R. Warner & Co., Charles Miller, Dunn Brothers, and James Hamilton & Co.

Some of the mills ship direct to foreign markets; others prefer to sell to local shippers, who contract for the deals and lumber at a fixed price either at the mill or delivered alongside the vessel. Among the shippers are Messrs. Alex. Gibson & Sons, W. Malcolm Mackay, George McKean and John E. Moore, of St. John, and J. B. Snowball and F. E. Neale, of Chatham.

Many of the mills throughout New Brunswick are supplied with the latest and most modern equipments, which no doubt accounts in a measure for the success which has attended the efforts of manufacturers to secure foreign trade. The principal markets are Great Britain, West Indies, South America, France and Spain, and during the past summer a shipment of lumber was made to Austrailia, but with what success we have not learned.

Foreign capitalists seeking fields for investment are being attracted to New Brunswick by its abundance of spruce timber, ample railway and watercourse facilities, and excellent means of transportation to foreign markets. The erection of extensive pulp mills is about to be commenced. This will be of material benefit to the province, and utilize much raw material to the best advantage.

---

### KILGOUR SHIVES.

Situated at Campbellton, on the Restigouche river, is the large mill of Mr. Kilgour Shives, of which an illustration is given. Mr. Shives is known as a progressive lumber merchant, always on the watch for improvements and new ideas. He is an inventor of an excellent machine for the cutting of slabs and edgings into fire-wood. The mill of which we speak is equipped with modern machinery for the production of spruce deals, palings, planed and matched boards, box stuff and shingles. The annual production of the latter is quite large. The deals are cut with an improved gang saw, and for cedar there are seven shingle machines.

Mr. Shives is becoming well known as an exporter. His shingles, of course, are disposed of in the United States, but the chief market for deals and boards has been Great Britain. A couple of years ago, however, he shipped two cargoes to the River Platte and two to Marseilles, France, and this year he made an experimental shipment to Australia. It is by the efforts of such men as Mr. Shives that our goods become established in foreign countries. As the owner of nearly three hundred square miles of valuable timber lands, he is recognized as one of the wealthiest lumbermen of Northern New Brunswick.

---

### TRACADIE LUMBER COMPANY.

The Tracadie Lumber Company, of Tracadie, have recently erected a very complete mill at Sheila. It is very nicely situated on high ground, overlooking an inlet of the sea, which forms a most perfect pond for holding the logs, and is sufficient in size for any stock that could possibly be put in. The mill, a view of which is shown, consists of a single band, with room and power for a second band, with the ordinary other machinery, including bull wheel for getting the logs into the mill. In the log deck is placed a steam cutting-off saw, sufficiently large to cut the largest pine logs into suitable lengths for making clapboards, of which a large quantity is turned out. The steam kicker and log loader throw the logs from the bull wheel on to the carriage, and the steam niggers handle and turn the logs after they are on the carriage. A gun shot steam feed handles the carriage, and live rolls with transfers take care of all the product from the band mill. Sawdust and refuse carriers are so arranged as to take care of all the refuse that is left. Most of this, however, is worked up in box shooks and other stock of this description, so that but little of the material is wasted. All the usual appliances for turning out lumber promptly and perfectly are employed, and the class of stock manufactured is of excellent quality, while the mill is a credit to both the owners and the builders. The complete equipment was supplied by the Waterous Engine

Tracadie Lumber Company's Saw Mill at Sheila, N.B.

Works Company, of Brantford. Mr. Foster, the manager of the company, lives at the mill. He has, in one season, got his boarding house and mill yard, and all the surroundings of the mill, in exceedingly fine shape. It is, in fact, one of the most complete mills of New Brunswick, and is thoroughly modern in its equipment and methods. Mr. Foster has shown great energy and ability in getting it into shape.

A great deal of the stock is pine, and this is largely cut into clapboards for the eastern markets, automatic machines being used for this purpose. The clapboards, after drying a few weeks, are planed before shipping, there being a first-class planing mill outfit in connection with the mill, including, besides the clapboard planers, two other large and heavy machines for flooring and timber, besides considerable other equipment. The planing mill has all modern appliances for handling the material to be planed. The output of the mill is from 50,000 to 60,000 feet of lumber per day, and from 30,000 to 40,000 clapboards, besides the other material.

Saw Mill of Hale & Murchie at Fredericton, N.B.

### HALE & MURCHIE.

The lumbering firm of Hale & Murchie, of Fredericton, is composed of Mr. Fred H. Hale, M.P., who resides at Woodstock, and Mr. George A. Murchie, who lives in Calais, Maine. The mill at the above place consists of a structure 175 ft. by 40 ft., with engine house and other necessary buildings. A gang, rotary, two lath machines and planer comprise the main equipment.

The product is an excellent quality of deals, boards, scantlings (all dimensions), laths, and finished clapboards. The firm cut about 12,000,000 feet of logs, but only manufacture themselves about nine million feet. The logs are cut on the Tobique, and except for a little pine are all spruce timber. Some three or four million feet of deals are cut each year for shipment to England. A good deal of the output is sent by rail to St. Stephen for export, chiefly to the United States. Mr. Fred H. Hale, M.P., who lives at Woodstock, and represents Carleton county in the Dominion parliament, is the managing partner, and formerly owned mills at Woodstock, floating the logs in rafts down to Fredericton, sometimes five or six million feet in a year. Mr. Hale has been connected with the lumber trade for a quarter of a century or more, and has a thorough knowledge of the timber resources of the upper St. John district. His partner, Mr. George A. Murchie, who lives in Calais, Me., is also of the firm of James Murchie & Sons, who have mills at several points in New Brunswick. The Victoria mill is connected both by rail and water routes with the markets, and has excellent facilities for the manufacture and shipment of lumber.

### ADAMS, BURNS & COMPANY.

The above firm are successors to the St. Lawrence Lumber Company, whose property in New Brunswick was disposed of a few years ago by the liquidators. The business is carried on under the management of Mr. T. D. Adams. The property includes mills at Bathurst and Burnsville, some eight or ten thousand acres of fine timber land on the line of the Caraquet railway, the lease of 150 square miles of Crown timber lands at Burnsville, and 250 square miles on the streams emptying into the Bathurst basin; also the Gulf Shore Railway, which, with the Caraquet line, gives a total length of eighty miles, connected by the latter line with their mills at Burnsville and Bathurst. The company export annually about ten million feet of lumber. A view of the Bathurst mill is herewith printed. The mill at Burnsville is water power, and cuts about three million feet yearly.

Saw Mill of Adams, Burns & Company at Bathurst, N.B.

### MURRAY & GREGORY.

The senior member of this firm, Mr. W. H. Murray, is known as one of the oldest lumbermen of New Brunswick, forty-five years having elapsed since he first engaged in the business. Until 1878 Mr. Murray resided and operated mills at Springhill, some miles above Fredericton, on the St. John river. In 1868 he acquired an interest in the mill property at Marble Cove, just above the "falls," about a mile above the head of St. John Harbor, including the mill and 13 acres of land fronting on deep water. In 1876 the mill was destroyed by fire. In the same year the present buildings were erected, and in 1882 Mr. Murray became sole proprietor. He has since made many improvements in the plant, until the mill is one of the best equipped on the river. Last year his confidential clerk, Mr. J. Fraser Gregory, was admitted as a partner, and the firm name was changed to Murray & Gregory. The mill has gang and rotary for long lumber, and machines for making laths, boxes, cooperage stock and such small products. The greater portion of the output is in deals for the English market, but some of the product goes to the United States and some to South America, being sold in nearly all cases direct from the wharf. There are ample wharves and yards, with dry houses. The firm cut each winter about 40,000,000 feet of spruce, pine and cedar logs, manufacturing 17,000,000 and selling the balance to other mills. Their limits comprise 900 square miles, and are situated on the Big Black, St. Francis and Main rivers and Temiscouata Lake. Mr. Murray is also president of the St. John Log Driving Company and a director of the Fredericton Boom Company.

---

The Dodge Manufacturing Company of Toronto have received a letter from the Globe File Manufacturing Company, of Port Hope, in which they express great satisfaction with the rope drive furnished by the Dodge Company. They say in part: "We put it up as per your plans, started it to run, and it went off so well we have only adjusted one pulley since. You may refer persons to us when talking rope drives. We would not return to gears again for four times what the four drives cost us."

# Province of Nova Scotia

LUMBERING in Nova Scotia, as in the other provinces, is an important industry, and one from which considerable revenue is derived. But when we speak of revenue, it is necessary to explain that the timber lands are not a perpetual source of income to the government, inasmuch as they are sold outright to private individuals, and no timber licenses are granted. In the province of Nova Scotia, excluding Cape Breton, which has little timber, the area of good timber land is estimated at 2,700,000 acres. Of this perhaps 2,000,000 acres are in the hands of lumbermen, the balance being held by the Crown, although it is said that no large tracts of valuable timber property are to be obtained. The perpetuity of the industry, therefore, rests upon the lumbermen themselves, who, we believe, are now giving some attention to the question of reforestation. In view of the fact that spruce will reproduce itself in a comparatively short time, it should not be a difficult matter to obtain a permanent supply. Among the manufacturers engaged in the export trade are the following :

The annual cut of spruce is about 200,000,000 feet, while a much smaller quantity of hardwoods is taken out. Last year the value of the lumber exported from Nova Scotia was about $3,000,000, but this was an unusually active year. The principal shipping points are Halifax, Parrsboro, Amherst, Bridgewater and Pictou, but there are also a number of smaller ports at which vessels are loaded. The location of Nova Scotia, on the Atlantic seaboard, permits of an extensive export trade in lumber, Great Britain, South America and the West Indies being her largest markets. Previous to the imposition of the United States lumber duty of two dollars, a quantity of lumber was sold in the Eastern States, but that trade is now of little account.

This year the lumbermen of Nova Scotia have experienced a severe depression, owing to an overstocking of the British market last year and a consequent drop in prices. British deals have this year sold at from $1 to $2 per thousand feet less than last season, and the outlook at the present time is not altogether encouraging. As a result, a number of manufacturers are giving greater attention to other markets, such as the West Indies and South America, and we believe with success.

## LUMBERING METHODS IN NOVA SCOTIA.

The conditions under which lumbering was carried on in Nova Scotia up to about twenty years ago were quite different from those at present prevailing. While shipbuilding was the paramount industry, but little attention was given to the manufacture of lumber for export, but when it became unprofitable to build wooden ships, attention was turned to the saw mills. Formerly but very few mills depended wholly on exporting all their cut, most of them sawing shipplank, decking, and other timber required in vessel building, and only sawing the rough and otherwise unsuitable timber for shipbuilding purposes into deals, battens and deal ends, which were sent to St. John in small trading vessels. The mills up to the time mentioned were usually operated by water power, located at or near the mouth of some stream where small schooners could be loaded, and would be run two or three months in the spring, then again in the fall for a short time, when the summer drought was put an end to by the fall freshets. At that time a gang mill sawing thirty-five thousand superficial feet of deals between daylight and dark would be counted an exceedingly good mill.

A great many of the shipyards were equipped with rotary mills between 1870 and 1880, and when shipbuilding waned such experience had been gained in the handling of these mills by the operators that they naturally turned them to the manufacture of deals, some operators being very successful, which fact impelled other, but inexperienced, men into buying "rotary mills." These mills were made light, in order that they could be moved from place to place where a few hundred thousand feet of logs could be got together. Some mills would be moved four times during the year. They generally ran in the winter right in the woods, as near as possible to the stump, the sawn lumber being much easier to haul to the shipping point than the round log to a convenient place to saw, and in this way at least one handling of the lumber would be saved. Usually the owner of the standing timber would cut and haul the logs to the mill, then haul the sawn lumber to the shipping point, paying the owner of the mill so much per thousand for sawing, although in some cases the mill owners would contract to deliver the deals at the shipping point, taking the whole contract for cutting, hauling and sawing. Again, some mill owners would buy a piece of timber land and operate it as he chose, while some would pay a certain amount per thousand feet stumpage, the result being in all cases the same, viz., employment for the mill.

The natural result has followed the introduction of this class of mills, viz., that spruce timber lands are very scarce and in great demand throughout the province. The ojectionable feature of the portable saw mill is the large amount of refuse timber it leaves in the woods in the shape of heavy slabs, which in some cases would make a couple of boards or a piece of scantling. It is claimed that the labor of sawing it into shape, and the hauling, would cost more than it would be worth. In the last few years some of the careful operators have added lath and picket machines to their plants, and thus save what formerly was worse than wasted.

In the counties of Cumberland, Colchester and Hants the portable mill has had its greatest success—these counties formerly being the great shipbuilding points and having a great quantity of timber without water facilities for drawing to tide water.

To a less extent the portable mill has been used in Pictou, Kings, Annapolis and Digby counties, while on the south shore there were but two or three portable mills. Along the Atlantic coast of the province there are some very good rivers which, in addition to providing log driving facilities, also furnish water power to saw the logs—notably Moser river, Sheet Harbor, East and West rivers, Musquodoboit river, Lahave river, Liverpool river, Medway, Jordan and Shelbourne rivers. All these have large mills, while a number of lesser size also have mills in proportion.

There are a number of large steam mills, the logs for which are driven, the cost of steam power being less and more advantageous than water power, viz., at Sherbrooke, St. Mary's river, St. Margaret's Bay, Gold River and Tusket River, near Yarmouth. There are no mills of any size on the north, or, as it is called, the Gulf shore, the lumber there being sawn with small water power and portable mills. The Bay of Fundy waters have but three water mills of any size, two on River Hebert, and one on the St.

Croix. While there are steam mills of larger size at Shulie, Sand River, Apple River, Eatonville, Newville, near Parrsboro, Stewiacke, and on the Avon river above the town of Windsor, there are a number of medium size mills, steam and water, at Weymouth, Meteghan and Hectanooga, at the western end of the province.

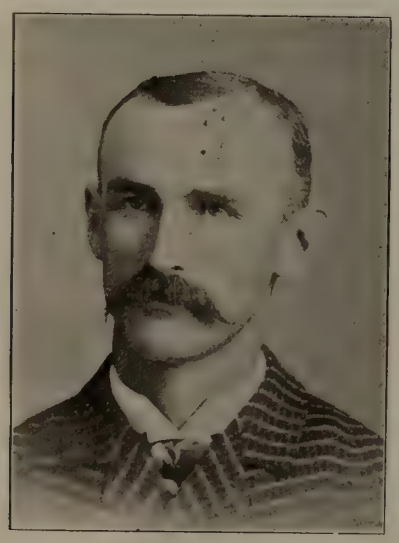
The principal markets for the mills from Annapolis around the shore via Yarmouth to,

Hon. Alfred Dickie.

say, Gold river, is the West Indies and South America, while the Bay of Fundy and the Atlantic coast mills east of Halifax prefer the English market when prices are right, but they are prepared to saw to specifications for the best paying markets.

## ALFRED DICKIE.

The county of Colchester, N. S., stands foremost in the counties of the province in natural resources, and no part of the county in this respect excels the Stewiacke valley. In this valley, on the bank of the Stewiacke river, and in close proximity to the Halifax terminus of the Intercolonial railway, stands the widely known milling property owned and operated by Hon. Alfred Dickie, of Lower Stewiacke. This mill, of



Mr. John A. Gillis,
Manager for Alfred Dickie at Lower Stewiacke, N.S.

which a view is shown, is a modern and up-to-date establishment in every respect, was built by the present owner in the year 1894, and up to the present date has cut up and manufactured some forty million superficial feet of lumber, averaging yearly about a five months' operation.

The mill proper is a structure 80×120 feet, containing, on the upper floor, gang and rotary, patent double edgers, lath, planer and box machines. The ground floor is occupied chiefly by saw-dust carriers, which convey saw-dust to the furnaces. Here also are found turning lathes and general repair apparatus. Adjoining on the north side is a brick engine and boiler house, containing large tubular boilers, and a one hundred and sixty horse power engine.

One of the strong features of this mill is its almost unique contrivance, consisting of an endless chain six hundred feet in length, which carries all refuse material to a distance where it can be burned with safety. The cutting capacity of the mill is eighty thousand superficial feet of deals per day, and a correspondingly large quantity of laths, palings and shooks. The present season's operations, when completed, will amount to as much as ten million superficial feet of manufactured lumber, of course necessitating an unusually long season's work. Mr. John A. Gillis, whose protrait we present, is manager of the mill.

Here a few words as to the nature and extent of similar industries carried on by Mr. Dickie at Three Fathom Harbor (near Halifax) and Glengarry, in Pictou county, might be given.

Three Fathom Harbor is nicely situated, eighteen miles east of Halifax, with which, of course, it has easy and direct communication by water. The business carried on here consists of an 80 h. p. mill, containing a rotary, edgers, trimmers and lath machines. During the past season this mill has turned out some three million superficial feet of deals and other lumber. It is situated in a cove at the head of the harbor, from which the lumber is loaded on large scows, carrying 150 M. superficial feet each, which in turn are towed to Halifax harbor, where they are discharged into vessels ; but arrangements are now being made by which Mr. Dickie hopes to load large vessels at Three Fathom Harbor.

Saw Mill of Alfred Dickie at Lower Stewiacke, N.S.

As to the operations at Glengarry, during the past two seasons Mr. Dickie cut and shipped from that place some eight million superficial feet of spruce and other woods from his portable mills, which wood is carried by rail to Pictou landing, some 18 miles, thence by water to the various ports where markets have been found.

Mr. Dickie recently purchased large interests at Ship Harbor, some 40 miles from Halifax. This property, containing about thirty-five thousand acres of heavily timbered land (principally spruce), was purchased within the last year from Messrs. Hill & French, who carried on lumbering operations in a section of country adjacent. Ship Harbor is considered one of the best ports of shipping in Nova Scotia. This will not seem inconsistent when we say that ships of two thousand tons capacity can sail ten miles inland, where they can be loaded direct from the mill. It is the intention of Mr. Dickie to erect at Ship Harbor the coming winter a mill equipped with every modern milling appliance and with a capacity of six million superficial feet of manufactured lumber each season. At Tusket, N.S., Mr. Dickie, in conjunction with Mr. Thos. N. McGrath, also owns a valuable mill property, which has been

Mr. Thos. N. McGrath,
(Dickie & McGrath, Tusket, N.S.)

previously described in this journal. This year they have been cutting largely for the markets of South America, France and the West Indies.

A few words as to the career of Mr. Dickie. He was born at Lower Stewiacke, where he now resides, some 38 years ago, obtained the degree of B.A. at the age of eighteen, and subsequently an M.A. degree. Afterwards he studied abroad, and launched out into the business world, with what success can be gleaned from the above reference to his lumbering operations. He has also been active in public life, having represented the county of Cumberland in the Dominion parliament and being chosen a member of the Cabinet.

## A. C. & C. W. ELDERKIN.

The lumber mills and property at Eatonville were originally owned by the firm of D. R. & C. F. Eaton, who carried on shipbuilding and a general saw-milling and mercantile business up to the year 1884. Mr. D. R. Eaton died in 1883, ann some time afterwards the firm was reorganized and the name changed to C. F. & F. R. Eaton, F. R. Eaton being a son of D. R. Eaton. About this time the building of wooden ships ceased, and the firm turned their attention to the manufacture of spruce lumber for export. They had a rotary mill about two and one-half miles up the stream, where the timber and planking

for their vessels was sawn, and a horse railroad connecting the mills with the shipyards. When the change was made, they moved the mill frame to tide water and put a gang into the mill. The power was also increased, the engine now being 250 h.p. The mill was designed specially for sawing deals, being supplied with all the improved machinery necessary for the purpose. The Messrs. Eaton carried on the business up to last year, besides building two vessels for the Greenland trade for McKay & Dix, of New York.

About the first of December last, Messrs. A. C. & C. W. Elderkin, of Advocate Harbor, N.S., purchased the property from Messrs. Eaton just as it stood, and have since operated it. The Messrs. Eaton had begun operations for the winter's logging, and had about two million feet of logs yarded. The purchasers took these, along with the teams, logging appliances and camping outfits—in fact, they just stepped in and continued the operations as outlined by the previous owners, although they did not get out quite as many logs as Messrs. Eaton intended to cut. The firm cut at this mill this season three million feet of deals and two million lath. The deals have been shipped to English markets, but they have all their boards yet on their wharf, preferring to hold them rather than sell at the prices prevailing in the United States markets. The firm intend getting out about four million feet the coming winter, and are prepared to saw for the best paying market. They are looking over the South American and West India markets, and will probably test both. Boston and New York have been the best markets for their short lumber and boards, and when business in the United States gets back to its normal condition, it will absorb such goods as heretofore. Vessels of six to eight hundred tons can load directly at the mill wharf, but when they sell to parties shipping to the English markets, the deals are lightered either to West Bay, near Parrsboro, or to Grindstone Island, about ten miles distant, where the largest steamers can take cargo, there being a good depth of water, plenty of sea room, and good anchorage. For South American trade vessels of five to eight hundred tons are the most profitable. These can load at mill.

The timber property of this estate is nearly all spruce, and comprises about twenty thousand acres. By preserving the timber as far as expedient, the supply will stand a cut of about two and one-half million feet for a long time. The limits are situated on the Chignecto peninsula, the land being strong and the growth of timber rapid. Danger from fire is very slight, as the ground is covered with a mossy growth which is always damp. The timber itself is slow burning, being exposed for a great part of each season to the salt fogs that prevail on the Bay of Fundy; the wood absorbs the salt and becomes partially fireproof.

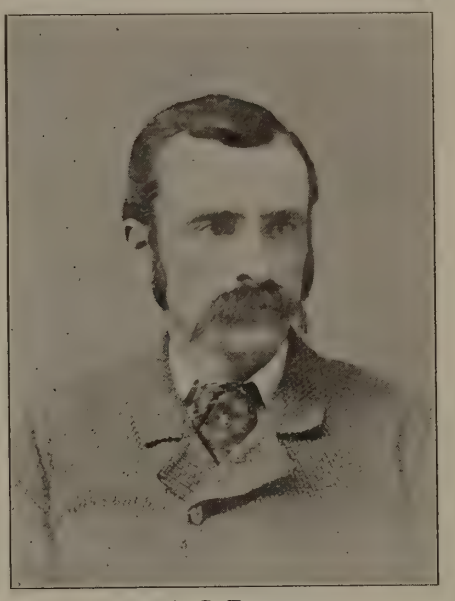
On account of the situation of the limits, about two miles is the longest haul, and the logs cut at the head of the stream are landed three miles above the mill. There are several driving dams on it, which hold enough water to run the logs to the mill in a few hours. Further down the peninsula the logs are browed along the shore, and when wanted are boomed and towed to the mill. There is a large pond just above the mill, into which logs can be run at high water on each tide, and where they are perfectly safe from any storm. The logs from the head of the stream before referred to also run down into this pond. The capacity of the mill is 60,000 feet of deals per day, but Messrs. Elderkin prefer quality to quantity. They believe that they can take a smaller quantity of logs and by careful manufacture make quite as much money out of them, allowing nothing to go to waste, and thus conserve their forest area. The firm own a steam mill and general store at Advocate Harbor, and also have a store at Eatonville. They have some good schooners which they built themselves and run in the coasting trade. They are natives of the county of Cumberland, and are very enterprising young men.

Saw Mill of A. C. & C. W. Elderkin at Eatonville, N.S.

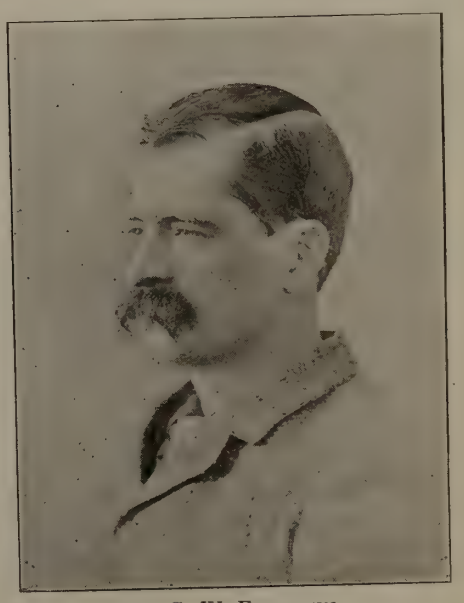
### T. G. McMULLEN & COMPANY.

An account of the lumbering operations of the province without special mention of the firm of T. G. McMullen & Co., whose head office is at Truro, would be incomplete. Mr. McMullen has been prominent in lumbering and milling operations since the early seventies, having built a large rotary mill in Truro in 1873. Logs became scarce there, and he operated a number of portable mills in different parts of Colchester, Hants and Pictou counties. The firm at present probably own the largest quantity of timber lands in the province. Besides several portable mills, they own and operate a modern band saw mill at Hartville, on the line of the Intercolonial railway, and on which the cut of this and several of the portable mills is sent to Halifax for shipment.

The mill is water power, furnished by the St. Croix river, the outlet into the Bay of Fundy of a large system of lakes, around which the company have an immense quantity of very fine spruce and pine timber, and on which the logs are taken to the mill. A system of dams gives them an ample supply of water to operate the mills during the summer drought. At this mill there is sawn about eight million feet per year, while their total cut runs from twenty to thirty-five million, according to the market demands. The bulk of their lumber is shipped from the port of Halifax, but they also ship a quantity from Pictou. The greater portion of their cut is deals for the English market. This firm also believe in the crosscut saw for felling trees and cutting into logs, and so satisfied are they of the advantages obtained by so doing that they stipulate in all contracts with jobbers that the logs must be sawn as far as possible.



Mr. A. C. Elderkin.



Mr. C. W. Elderkin.

### ONE DOLLAR.

The above sum represents the yearly subscription price of the Canada Lumberman, including both weekly and monthly editions, mailed to any address in Canada or the United States. Owing to postal charges, the subscription price to foreign subscribers is two dollars per year. Persons in foreign countries interested in Canadian timber products can invest that sum to no better advantage than by becoming a subscriber. Likewise every mill owner in Canada should read the columns of the Canada Lumberman. A sample copy will be gladly furnished upon request.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## THIS ISSUE.

THIS number of the CANADA LUMBERMAN is largely representative of the spruce wood trade of Canada, a branch of the lumbering industry which has rapidly grown in importance of late years, and which is common to the provinces of Quebec, New Brunswick and Nova Scotia. We are too prone to regard our white pine forests as by far the most valuable asset of Canada, and to look upon spruce as an inferior class of timber. But we believe that by careful husbanding of our spruce forests we will find that we shall have a possession quite as valuable as that of pine. For interior finish and the finer grade of joinery and cabinet making, spruce will never become popular, its great value being its adaptability for making pulp. In foreign markets, however, spruce lumber is steadily gaining ground, and is replacing Baltic woods.

This special issue of the CANADA LUMBERMAN is designed to diffuse information regarding the spruce forests and saw milling establishments of this country, and more particularly the eastern section thereof.

It is impossible, in the limited space at our disposal, to publish particulars of the many mills scattered over the three provinces specially represented by this issue. The total number, from the small portable mill used so largely in Nova Scotia to the huge band mill of one hundred thousand feet daily capacity, reaches up into the thousands. To each of these a copy of this issue of THE LUMBERMAN will be forwarded, in order that every lumber manufacturer may, by a perusal of its pages, learn of the advantages to be derived from a first-class trade paper. The subscription price of one dollar covers both the weekly and monthly editions.

The publishers are always gratified to receive contributions from the trade on any subject of current interest. This fact does not appear to be understood to the desired extent. General information, such as proposed improvements, increase of plant, market conditions, etc., is likewise appreciated. The CANADA LUMBERMAN is published in the interests of the Canadian lumber trade as a whole, and to this constituency it confidently appeals for recognition and support proportionate to the service which it is endeavoring to perform.

## FOREST PRODUCTS AND THE QUEBEC CONFERENCE.

No question is receiving more attention by the commissioners in session at Quebec than that relating to trade in forest products. This is as expected. The situation is such as to make it impossible that representatives of the Canadian and United States governments could meet to adjust trade difficulties without being forced to consider the situation as to timber. Anticipating this, the Lumbermen's Association of Ontario adopted a resolution at a meeting last August, setting forth their views, and expressing their willingness to submit to the free exportation of logs in return for free entry of lumber into the United States, although some of those present were bitterly opposed to the export of logs under any circumstances. This was the beginning of what will pass into history as one of the most interesting periods in the lumber industry of both countries.

So far as can be gleaned, a settlement as to logs and lumber is no nearer than when the conference opened, and yet we believe that the importance of the question to both countries will demand that some measure of reciprocity be decided upon for presentation to the governments of both countries.

Canada will accept nothing short of free lumber for free logs. If she cannot obtain free lumber, then the manufacturing clause as passed by the Ontario government will continue to exist. In the United States the situation is different. We find one section of the country arrayed against another; one district in favor of free lumber, another opposed to it. The different interests have been very active during the Quebec conference, deputations having addressed the commissioners and vigorous lobbies having been establised. The Michigan lumbermen owning Canadian limits are directing their efforts to defeating the act passed by the Ontario government compelling home manufacture. Representations to that end have been forwarded to the government at Washington, thence to the British government, Dominion government, and, finally, to the premier of Ontario. The latter, however, has announced his decision to adhere to the manufacturing clause, only receding therefrom on one condition, viz., that the United States shall permit free entry of all grades of Canadian lumber.

Regarding the legal aspect of the case, this was no doubt well thought out and considered by the Ontario cabinet before action was taken, and is founded on the British North American Act. Only a brief review is necessary to show who are responsible for the present difficulties. In the year 1890 there existed a United States import duty of two dollars per thousand on lumber, and a Canadian export duty of two dollars per thousand on logs. In the fall of that year Canada agreed to remove the export duty in return for a reduction of the lumber duty to one dollar. (By a piece of sharp practice, the McKinley bill read "on white pine only," leaving spruce and red pine still at two dollars.) Then in 1894 lumber was declared free by the Wilson bill, but the Dingley bill of 1897 restored the duty on all kinds of lumber to two dollars. The only course left open to Canada was to return to the export duty, but this was prevented by the placing of a retaliatory clause in the Dingley bill, increasing the import duty on lumber by the amount of the export duty that might be imposed. The Dominion government were in a measure handicapped, and the justice which was due Canadian lumbermen was obtained through the original owners of the timber, the Ontario government.

The Michigan lumbermen are not alone in their desire for more amicable relations in regard to timber. The consumers of the Eastern States are working vigorously for free lumber, and are an important section of the country. Wholesale dealers, even those who were previously in favor of the duty, now find that their trade has been seriously interfered with, owing to being compelled to buy at high prices at western points, and are exerting themselves to secure free lumber.

Reverting to the conference, the acceptance by Canadian lumbermen of a one dollar duty in return for free logs seems to have been eliminated from the possibilities. The stand which they have taken is directly opposed to any form of compromise. They reason in this manner: There is an important market in the Eastern States and along the United States shore of Lake Erie for lumber, much of which will be supplied from timber limits tributary to the Georgian Bay. By cutting off the supply of logs for the Michigan mills, some lumber can be sold even under a two dollar duty. But with Michigan mills getting Canadian logs free of duty, and Canadian lumber being subjected to a duty of one dollar, the Michigan manufacturers would have a direct advantage over the manufacturer in Canada. The latter prefer to cut off the log supply to Michigan mills and take their chances under a two dollar duty. Then again, there are many persons in Canada who believe that in return for the free exportation of saw logs and pulp wood, we should be permitted to have unrestricted access to the American market for not only lumber, but all forest products, including pulp and paper. Certainly the same argument that applies to lumber and saw logs is equally applicable to pulp and pulp wood. Every year hundreds of thousands of cords of pulp wood are taken to the United States, to build up paper and pulp manufactories there, while a consider-

able duty is charged on th... nufactured article. Although at the prese... we hav... an abundance of spruce, a policy o... on sho... selves in the position occupi... the United States to-day.

## SUGGESTIVE OF TRADE POSSIBILITIES.

The Dominion of Canada is to-day regarded as a vastly more important lumber producing country than she was a few years ago. Her timber products have, through the efforts of enterprising exporters, found their way into importing countries of both hemispheres, where they have successfully encountered competition and become a standard article of import. Great Britain, under a free trade policy, has furnished a market for perhaps nine-tenths of the export to the European continent, and yet her possibilities are by no means exhausted. It is equally true, however, that in other countries there exists markets quite as promising as those of Great Britain, and worthy of the attention of Canadian lumber exporters.

The information published in this number concerning foreign markets is in some respects particularly suggestive, and will repay careful consideration by manufacturers desirous of engaging in the export trade. We will refer briefly to some of the signal features of the reports.

The magnitude of the annual import of wood goods into Great Britain, reaching in value $88,000,000, of which Canada supplies only $15,000,000, or about one-sixth of the total, furnishes ground for enquiry as to the possibility of increasing our trade with that country. This, we believe, can be done. The timber supply of the United States will soon become exhausted, so that Norway and Sweden are the only countries which can be looked upon as strong competitors of Canada. Our timber has gradually replaced the Baltic wood for certain purposes, and will no doubt continue to do so. The most promising outlook for the expansion of our trade appears to be in the export of partially manufactured stock. In earlier years a larger quantity of timber was imported in the log; this has steadily given way to deals and boards, and to-day the tendency of the trade is to import the manufactured stock ready for use. The reason is obvious. In importing the timber in the log freight must be paid on much waste material; so with deals and boards which are intended to be re-sawn into smaller sizes. The necessity of cheapening the cost of production will not permit of this expenditure. Note the remarks of a correspondent: "There is really no end to the field which exists for the extension of trade in partially and wholly manufactured specialties in hard and soft wood." The wise manufacturer will not permit these suggestions to pass unnoticed. It is along these lines that we would advise our manufacturers to direct their efforts.

Some mill men without representatives in the British market may feel disposed to ship lumber to be sold on consignment. Frequently this method results unsatisfactorily. It is not only unfair to importers who contract for shipments at a fair price, but often causes a general depression of the market. There are reliable agents to be secured, who will look after the interest of exporters and keep them informed as to the requirements.

Taking the other countries to which we export lumber, we find conditions quite different from those in Great Britain. Canadian lumber is imported into South America, the West Indies, Australia, and ... in considerable quantities, although the bulk of it is shipped from United States ports, and is looked upon as American lumber. The lesson to be learned from this is that the Dominion government should, at the earliest possible moment, establish direct lines of steamships between these countries and Canada. So long as we are content to allow our exports to stand to the credit of the United States, we cannot expect to increase our trade to any great extent. It is pointed out that from many of these countries return cargoes of goods could be obtained.

A peculiar circumstance is recorded by Mr. Lewis E. Thompson, commercial agent at Santiago, Chile. For some years, he says, box shooks have been imported into Santiago from England, these being made from Canadian spruce. It seems almost incredible that this should be the case, and it certainly calls for investigation and action by Canadian box shook manufacturers.

The claim has been made against Canadian lumber that it is not always carefully manufactured and shipped in such a manner as to meet the requirements of foreign markets. There has, perhaps, been some ground for this complaint in the past, but a decided improvement has taken place in recent years, and it is now possible to obtain in Canada lumber of the best manufacture and highest grade. Foreign importers evince a strong disposition to handle Canadian timber products, a statement that is borne out by advices from well-informed correspondents. By energetic effort on the part of our manufacturers a considerable extension of our trade in wood goods is possible, and will doubtless be witnessed in the next few years.

## EDITORIAL NOTES.

The experiments now being made at Ottawa to secure the conversion of sawdust into carbon for the manufacture of calcium carbide are being watched with keen interest by lumbermen. Mr. Emerson, the inventor of the patent, has been engaged on the work for several months, and hopes within a short time to demonstrate the success or otherwise of the scheme. If successful, the thanks of the entire lumbering fraternity will be due Mr. Wm. Edwards, under whose direction the investigations are being carried on.

An estimate of twenty-five million feet has been made as the amount of lumber that will be imported into Manitoba and the Northwest from the United States this year. This is as against some sixteen million feet last year. The lumber consumption of the Northwest is yearly increasing; farmers are more prosperous, and are spending more money in the erection of buildings. As the country becomes still further populated, even a much greater quantity of lumber will be consumed. So much regarding the importance of the market. Then why should we permit the benefit of these improved conditions to be shared by the United States, which has erected a tariff wall between the two countries so far as lumber is concerned? Until we are allowed free entry of our timber products into the United States, we should at least exclude the importation of United States lumber.

It is not generally believed that band saws are suitable for cutting hardwoods, the objection being that they are not sufficiently rigid and will not stand up to their work. We know of but few hardwood mills in Ontario equipped with band saws. On the other hand, inquiries received at this office would lead to the conclusion that band sawn hardwood lumber is coming more into favor. This is a point which might well be considered by persons contemplating the remodelling of their mills or the erection of new ones, and upon which we would be pleased to have an expression of opinion from our readers.

No arrangements seem to have been made as yet which would indicate that Canada intends to make a forestry display at the Paris Exposition of 1900. Surely this opportunity of advertising the timber products of this country is not to be allowed to pass, while every day brings evidence of the necessity of Canadian goods being better known in foreign markets. It is probable that the small space allotted to Canada has discouraged the movement to some extent, more especially in view of the proposal which was discussed a few months ago, and is still advocated by some, to hold a World's Fair in Toronto in 1901. Should this project be carried out, we might expect to witness a forestry display which would eclipse anything hitherto attempted.

We are frequently in receipt of letters from foreign importers enquiring as to where stocks of certain kinds of lumber, pulp wood or other timber product can be obtained, and in some instances have been enabled to direct our correspondents in the manner desired. This is practical evidence of the increased attention which is now being given to Canada as a lumber exporting country, and in a short time she may be expected to assume a commanding position in this particular. One of the best methods of ascertaining the whereabouts of desired stock is through the medium of the "Wanted and For Sale Department" of the weekly edition of the Canada Lumberman. This has been found very effective by those who have given it a trial, and will no doubt be patronized to a greater extent as it becomes better known. Advertisers may have their letters addressed to a box at this office, when they will be forwarded by the publishers.

The American Monthly Review of Reviews for October publishes a most interesting series of Indian portraits made by Mr. F. A. Rinehart, the photographer of the Trans-Mississippi Exposition at Omaha, in connection with an account of the Indian congress now in session there.

The Great West, an illustrated monthly magazine, published at Winnipeg, of which the initial number has come to hand, should prove a welcome addition to Canadian literature. It presents an inviting appearance, and is a fine example of "the art preservative." The contents are varied, including many articles of merit.

No matter in what part of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publisher of this journal. No reader should wait for a personal invitation. Assistance thus rendered, as well as suggestions for making this journal more valuable to subscribers, will be much appreciated.

## LUMBERING OPERATIONS OF EMILE STEHELIN.

A few years ago a progressive capitalist from France, recognizing the advantages of Canada as a field for investment, purchased considerable property in the vicinity of Weymouth, Digby county, Nova Scotia, and proceeded to establish a saw milling business. This gentleman was Mr. Emile Stehelin, by means of whose efforts a thriving settlement has been founded at New France, about sixteen miles from Weymouth. At this place Mr. Stehelin built a gang mill, situated on Long Tusket Lake, and driven by water power. It has a capacity of 15,000 feet of lumber per day, and is also provided with the planing, shingle and lath machinery necessary for a complete equipment. An electric light plant is also installed, which furnishes light to his mill and to the village as well. Three miles from New France, at Doyle Lake, Mr. Stehelin erected a portable mill of the same capacity as the one above referred to.

Mill of Emile Stehelin at New France, N. S.

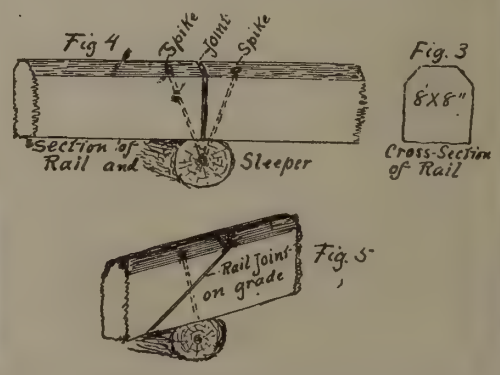
The lumber cut at these mills during the first few years was consumed in the erection of houses, barns, and other necessary accommodation, but when these were completed, attention was given to the export trade. Now Mr. Stehelin manufacturers annually one million feet for the South American market and 500,000 feet of deals for the English market. He owns about ten thousand acres of timber land, chiefly spruce.

Fig. 1—Pole Railway in Operation.

It is not alone in the direction of building saw mills that Mr. Stehelin has shown progress. Having his first stock of lumber ready for market in the year 1896, he discovered that, owing to poor roads, it would be very expensive and laborious to get it to Weymouth, the nearest shipping point. Realizing the necessity of better communication between the point of manufacture and the shipping port, he decided to facilitate matters by building a pole railway, which was begun in April, 1896, and has recently been brought to completion. The distance, as previously stated, is six miles, and the line serves six stations in its course: Nouvelle France; Doyle Lake, where there is one sawmill; Riverdale, where there are two sawmills; Woodville, where there are three sawmills; Corberrie, a thriving little village; and Weymouth, on the coast. The construction of this railway is so unique that we give some particulars and illustrations herewith.

On level ground the construction of a pole railway is a very easy matter, but in this part of Nova Scotia the country is hilly and there are a great many swampy stretches, which made construction more expensive than would often be the case. The cost of the whole line, including equipment in this case, was about $3,000 per mile. This included grades of three to six per cent., a number of bridges and several embankments of from ten to fifteen feet high. On level ground the construction consists in laying down sleepers ten feet long and three to four feet apart, on which is laid a spruce rail, sawn as shown in Fig. 3. The rails are twenty to thirty-five feet long, and are trimmed square for flat stretches and bevelled for grades, as shown in Figs. 4 and 5. The joints are made and the rails secured by twelve-inch wharf spikes.

Fig. 2—Construction of Pole Railway.



The method followed in building bridges and embankments is to lay a series of timber floors one upon another, each at right angles from the last, till the required height of the pier of embankment is obtained. With careful work and exact cutting of the timber, there is practically no limit to the height to which such piers and abutments can be carried.

The locomotive "Firefly," shown below, is the one first used by the road. This is an old stationary boiler and a twenty horse-power engine, mounted on a truck. The wheels are driven by an intermediate crank wheel. Considerable difficulty was experienced in adjusting the parts of this engine, but it was finally got to run very satisfactorily, and is used for hauling logs to the saw mills.

Fig. 6—Pole Railway—The Locomotive "Firefly."

The "Maria Theresa" is an entirely new locomotive, built expressly for the line by a Nova Scotia firm. It has four cylinders of twenty horse-power each, driving two trucks of four wheels each.

In operating a line of this kind, one of the greatest difficulties to be contended with is the amount of friction developed by the wheels, which do not run on the wooden rails with at all the same ease as on steel or iron. The locomotive should, therefore, be made as light as is consistent with the power to be developed, the friction of the wheels being sufficient to compensate for the lack of weight in the locomotive. It is to obviate as much of this friction as possible that the upper surface of the rail is cut in three faces. At present only six miles per hour is obtained regularly, but Mr. Stehelin hopes with some modification of the locomotive wheels to obtain higher speeds. The engines are wood burning, but it is proposed to substitute coal, which can be had very cheaply at Weymouth. The freight cars used on the pole railway are twenty feet long, on two trucks with four wheels each; the passenger car is twenty feet long, and is covered and closed; there is also one small passenger car to carry four persons.

Fig. 7—Pole Railway—Locomotive "Maria Theresa."

# THE NEWS.

—C. McKay has opened a lumber yard at Altona, Man.

—Finch Bros. have started a saw mill at Kimberley, B.C.

—H. Brett has established a lumber yard at Lumsden, Assa.

—Dow & Curry are opening a lumber yard at Pilot Mound, Man.

—Mr. H. J. Greyell, Enderby, B.C., has secured a patent for a cant hook.

—Robert Stewart, of Guelph, Ont., is building an addition to his planing mill.

—The dissolution is announced of Leonard & Morin, lumber dealers, Garthby, Que.

—D. Miller contemplates building a saw mill and stave factory at Washago, Ont.

—Vigars & Co., lumber manufacturers, Port Arthur, Ont., have established an agency in Winnipeg.

—C. T. White is about to rebuild his mill at Apple River, N.S., which was destroyed by fire last spring.

—The E. & N. Railway Company are now locating a line of railway near Chemainus, B. C., to be used for logging purposes.

—The lumber yards of King Bros, Pabos, Que., which were recently consumed by fire, were insured to the extent of $53,000.

—Machinery is being purchased by R. J. Wilson, of Fort Frances, Ont., for a saw mill and flour mill at Big Forks, Rainy River.

—An exhibition of log rolling was one of the attractions at the Ottawa exhibition, some of Mayor Bingham's men being the performers.

—The Wm. Hamilton Mfg. Co., of Peterboro', Ont., propose to extend their works, and have asked for a bonus of $40,000 from the town.

—The firm of J. Biette & Company has decided to remove from Chesley to Tara, where they will manufacture cheese boxes, apple barrels, butter firkins, etc.

—Mr. T. S. Sims has purchased the Hayden mill property at Hardingville, N.B., and will at once install machinery for the manufacture of brush and broom handles.

—The Columbia River Lumber Co., Beaver, B.C., have decided to put in a steam plant in place of the present water power, the latter having resulted in a short milling season.

—B. W. Richards, a former resident of Brockville, Ont., is dead at Los Angeles, Cal., aged forty years. He was a successful lumber merchant until failing health compelled him to retire.

—Peter Genelle & Co.'s new mill near Robson, B.C., has started up. Its capacity is 100,000 feet every 24 hours, and some 50 men will be employed, besides several logging gangs already at work.

—A large circular saw burst in the Hastings mill at Vancouver, B. C., recently. It flew into numerous pieces; 50 men were close by, but no one was hurt, not even the sawyer standing next to the saw.

—The Pigeon River Improvement, Slide & Boom Company has been organized, to carry out improvements on the Pigeon River, in Algoma, in connection with the lumbering operations of Alger, Smith & Co.

—J. O. Gilbert & Son, of Bishop's Crossing, Que., are preparing to build a new office and make additions to their saw and planing mill. They intend putting in a larger engine and machinery for dressing pulpwood.

—Messrs. Galbraith, of Tara, are about to commence the erection of a new saw mill near Parry Sound, Ont., to have a capacity of 20,000 feet per day. Grindley Bros. have commenced the erection of a saw mill on Otter Lake, near that town.

—Incorporation has been granted to the North Shore Timber Co., with a capital of $60,000. The promoters are: Paul Weidner, E. W. Voigt, O. L. Webber and A. K. Kiefer, of Detroit, and R. A. Hazlewood and James Whalen, of Port Arthur.

—The Rat Portage Lumber Company have introduced what is believed to be the first electric car used in saw milling operations in Canada. This car will convey the lumber from the saw mill to the sash and door factory, and is expected to do the work of six horses.

—The generosity of the Royal City Mills Company, New Westminster, B. C., was displayed in connection with the recent fire there, by announcing that all who wished might have lumber, taking their own time to pay for it; besides this they opened a free eating house for the famishing citizens.

—Incorporation has been granted to the Canadian Yukon Lumber Company, of Montreal, composed of R. W. Smith, W. M. Ramsay, T. G. Roddick, E. F. Hand and Henry Bulmer. The company will carry on a lumbering and pulp business, and has a capital of $100,000.

—J. E. Murphy, of Hepworth Station, Ont., writing to the Barrel & Box, states that he has cut 500,000 staves this season, which have been sold at satisfactory prices. He is now turning out 1,000 sets per day of kiln dried heading. He is of the opinion that there is an opening on the Georgian Bay for a good box shook factory.

—It is understood to be the intention of the Hastings Saw Mill Co., of Vancouver, B. C., to erect a large saw mill at Village Bay, in that province, where they have a timber supply for ten years. This company recently completed a large flume over 600 yards in length, in the construction of which 2,000,000 feet of lumber was used.

—The Maple Flooring Manufacturers' Association of Chicago have issued a neat and attractive brochure, the object of which is to set forth the virtues and comparatively low cost of maple flooring. The booklet contains rules for grading maple flooring, and is compiled by the secretary, Mr. John E. Williams, 334 Dearborn street, Chicago.

—The Standard Chemical Co. of Canada, which has taken over the chemical works plant of the Rathbun Co. at Deseronto, Ont., are preparing to extend the works. The large brick kilns used for carbonizing the wood will be supplemented by 40 iron retorts. The company expect to manufacture wood alcohol, acetic acid, chloroform, paris green, and other products.

—Judge Wilson has given judgment against Alex. Crawford and George Phinnimore for the sum of $80.23. The claim was the result of stream driving operations on the Tobique river, the interested lumbermen being James McNair, Hilliard Bros., R. A. Estey, Senator Baird, Adam Beveridge and Hale & Murchie. The defendants were sub-contractors for the Tobique Driving Co.

—Mr. E. F. Stephenson, crown timber agent of Winnipeg, Man., returned recently from a visit to the timber limits situated in the Pine Creek district. He found that fires had done great damage to the reserve, and will recommend the department to take prompt action to preserve the growth in order to make the reserve a permanent one. The timber is chiefly spruce, tamarac and poplar.

—The forests in Sweden are threatened by new insects called nuns, which entirely destroy the trees. According to an official report these insects have ruined 600 acres of excellent forest in the neighborhood of Noorkoping, while all forests which have been invaded by the nuns must be cut down. The insects attack every tree in the forest, but whitewood seems to suffer more than the yellow pine.

—The Nova Scotia Lumber Co., of Sherbrooke, N.S., have completed one of the best gang and rotary saw mills in the Dominion. It is fitted with modern improvements, including saw-dust, bark and refuse conveyor. The conveyor carries the waste wood 400 feet from the mill, where it is consumed by fire. The gang saw has a capacity of 100,000 feet per day, and the rotary of from 25,000 to 30,000 feet per day. Between 80 and 90 men are employed.

—Arrangements have been made for the holding of a South African expedition at Grahamstown, South Africa, commencing December 15th next. The Department of Trade and Commerce has made arrangements for the free transportation from Canada to Cape Town of goods intended to be exhibited, and no duty will be charged on same. The Canadian government will make an exhibit, which is being looked after by Mr. Thomas Moffat, 16 Church street, Cape Town.

—The saw mill of Powers & Lequime at Midway, B.C., was destroyed by fire last month. The mill was in charge of Mr. William Powers, one of the partners, who has met with many business reversals of late. For three successive years floods have carried away his logs, notwithstanding that great precaution was taken to guard against such a contingency. In June last he lost 100,000 feet of logs by fire. We are pleased to learn that there is a probability of the mill being rebuilt.

## CASUALTIES.

—Narcisse Larocque, of Hull, was seriously injured in McGuire's limits at Whitney, Ont., by a tree falling upon him.

—Samuel Dell, a young man working in Welch's shingle mill at Foreston, N.B., had his head completely severed from his body by falling on a circular saw.

—Fred. Porter met with a painful accident in Kirk's mill at Spencer's Island, N.B., the other day. His hand got caught in a belt and was carried into the cog wheels, by which the hand and arm were ground to a pulp.

—Three men, named Joseph Legree, Charles Quesnelle and J. B. Sabourin, were drowned at the mouth of the Rouge river, while attempting to cross the swift current in a small boat. The men were engaged in lumbering operations.

## PERSONAL.

Mr. Podmore, of the timber firm of Sieveking, Podmore & Co., London, Eng., recently paid a business trip to Canada.

Mr. James Innes, secretary of the Sutherland, Innes Co., Chatham, Ont., returned a short time ago from a two months' trip to Europe.

Mr. Sutherland, of the Crown timber office, Winnipeg, has been removed to Yorkton, N. W. T., where he becomes Dominion Land Agent for that district.

Mr. J. A. Graham, assistant timber and tie inspector of the C. P. R., O. & L. division, has resigned, to accept a position as manager of a Kentucky lumber firm.

Hon. Arthur Hill, of the St. Anthony Lumber Co., Whitney, Ont., and the Arthur Hill Co., Midland, Ont., returned a fortnight ago from a six months' trip to the Pacific coast.

The marriage was celebrated last month, in St. Mathias' church, Westmount, of Miss Mabel Hall Ward, fifth daughter of Hon. J. K. Ward, of Montreal, and Mr. Gerald Aylmer, of the Bank of Montreal.

## TRADE NOTES.

The Victoria Foundry Co., of Ottawa, Ont., is building six match-making machines for Merritt & Co., of St. John, N.B.

The Waterous Co., of Brantford, had on view at the Quebec exhibition a 20 h.p. portable engine, running a small saw frame and carriage, cutting logs from 9 to 20 feet in length. In the machinery building they showed a planer, shingle machine and stationary engine.

The attention of Canadian lumber exporters desirous of obtaining a representative in Spain is directed to the advertisement in this issue of Mr. J. Carreras Ferrer, of Barcelona. Mr. Ferrer believes that a market could be found in that country for Canadian lumber, especially spruce, which is used very largely for box making. He offers to furnish first-class references to exporting firms.

At the recent Quebec exhibition an attractive display of their various manufactures was made by the well-known firm of Carrier, Laine & Co., of Levis, Que. In the machinery hall there were shown an automatic compound horizontal engine, developing 60 horse power, which is claimed to be the most perfect engine on the market. Besides other lines of engines and steam pumps, there was exhibited a complete line of gang saws, shingle machines, etc.

The new pork packing establishment of the Park-Blackwell Co., Limited, Toronto, is nearing completion. The building is a commodious structure of four stories, and is being equipped with latest up-to-date machinery and appliances, and is situated conveniently to the hay and cattle markets. The company anticipate requiring about three thousand hogs and one hundred head of cattle weekly. This enterprising company contemplate entering the export trade, in addition to giving attention to their large and growing ham trade. We draw attention to their advertisement, which appears in this month's issue of the CANADA LUMBERMAN.

The Dodge Manfg. Co. of Toronto, Limited, whose advertisement appears in our pages this month, have been granted a charter, and have taken over the business of the Dodge Wood Split Pulley Company. The Dodge Manfg. Co. will continue to manufacture the celebrated Dodge wood split pulley, and will also carry on a general engineering, foundry and machine business, making a specialty of power transmission machinery, such as shafting and hanger equipment, jack shafts, floor stands, friction clutch pulleys and couplings, rope driving, grain handling machinery, etc. The Dodge Company have been fortunate in securing a very able mechanical engineer to take charge of their works, and being especially well equipped, are in the best possible position to get work out quickly. Plans and information on all kinds of special work will always be cheerfully submitted. A 270 page handsomely illustrated catalogue is mailed free by the company on application.

# Foreign Markets for Canadian Timber Products

## GREAT BRITAIN

THE United Kingdom of Great Britain and Ireland is the most extensive timber importing country in the world. Possessing no forest wealth of any account, her many large manufactories using wood as their raw material are dependent almost exclusively upon importations from foreign countries. The quantity of wood goods imported annually by Great Britain is enormous. For the year ending December 31st, 1897, there were received at the various ports 9,845,988 loads of hewn and sawn timber. A load as used in England is equal to 600 feet board measure, making a total import for the United Kingdom in 1897 of 5,907,592,800 feet board measure. Placing the average value at $15 per thousand feet, this represents an annual expenditure in money of over $88,000,000. It should be stated, however, that in that year the market was overstocked, and therefore the average import would be slightly below the above figures.

We give below the quantity of timber received in 1897 at some of the leading ports, according to their respective importance :

| | Loads. |
|---|---|
| London, Eng. | 2,038,863 |
| Cardiff, Eng. | 889,703 |
| Liverpool, Eng. | 812,036 |
| Hull, Eng. | 808,684 |
| West Hartlepool, Eng. | 499,652 |
| Newport, Eng. | 286,548 |
| Glasgow, Scot. | 232,262 |
| Grimsby, Eng. | 396,377 |
| Gloucester, Eng. | 221,492 |
| Grangemouth, Eng. | 194,224 |
| Belfast, Ireland | 192,928 |
| Manchester, Eng. | 186,424 |
| Sunderland, Eng. | 167,954 |
| Bristol, Eng. | 167,382 |
| Leith, Scotland | 155,445 |
| Borrowstounness, Scot. | 131,054 |
| Fleetwood, Eng. | 125,135 |
| Greenock, Scot. | 128,508 |
| South Shields, Eng. | 116,671 |
| Dublin, Ireland | 111,920 |
| Plymouth, Eng. | 100,554 |

It has been estimated that the Dominion of Canada supplies Great Britain with timber products, including manufactures of wood, such as doors, box shooks, heading, etc., to the value of $15,000,000. Perhaps two-thirds of this amount is represented by pine and spruce deals. In late years our manufacturers have increased their shipments of lumber to Great Britain considerably, but from the above figures there would appear to be an opening for further extending our trade. In the lines most commonly imported, such as deals, planks, and square and waney timber, we believe the prospects for business have been fairly well investigated ; but there is undoubtedly a wide market yet undeveloped by Canadian lumbermen for manufactures of wood and specialties. The following letters, bearing upon the import and requirements of some of the principal centres, point in this direction :

DEAR SIR,—Regarding the best methods by which lumber manufacturers not already in the trade may bring their goods to the notice of buyers here, I would state that this can best be done either through the medium of the many old established merchants in the trade, by applying to agents or brokers on this side, or by advertising in special trade papers. There seems to be a concensus of opinion that the Canadian producer should place himself entirely in the hands of a single broker or agent, who would make it his business to watch his interests and obtain the best prices, while keeping him advised as to quality, style of preparation required for this market, etc.

It is not an easy matter to say what are the standard sizes of hardwoods in steady demand, as the demand varies from time to time and the sizes depend to a great extent upon the particular purpose for which the wood may be required. Oak, ash, black walnut, elm, maple, birch and beech are some of the hardwoods most in demand here.

There is really no end to the field which exists for the extension of trade in partially and wholly manufactured specialties in hard and soft wood. It is purely a question of price and quality, as competition is very keen, and for articles such as broom and axe handles, knife boards, spokes, carriage wood, car building materials, furniture, etc., low prices have to be accepted to secure a fair portion of the trade. The demand is very large, and Americans have obtained a hold on the market which renders competition very severe. For the most part the trade is done by merchants who import in large quantities by contract.

The Canadian wood pulp business is already established on a firm basis, and there is room for an indefinite extension of this branch of trade in both the mechanical and chemical varieties. The following are the views of a gentleman well acquainted with the lumber and pulp trade in all its bearings : " The Canadian wood pulp industry has, in our opinion, a great future. The pulp is regarded by British paper makers as in several respects superior to Scandinavian, and makes stronger and tougher paper. There will always be a good demand for it in London and Manchester, even at a trifle higher price per ton than Scandinavian mechanical. In addition to the several schemes for erecting wood pulp mills in Canada and Nova Scotia which are being carried into effect by means of British capital, our Mr. Phillips has heard quite recently that two of the leading paper-making concerns in this country are on the point of dispatching representatives to Canada to gather information with a view to the purchase of land and the establishment of mills to supply pulp for their requirements. No doubt is entertained in the best informed paper trade circles here that the Canadian wood pulp industry is capable of vast development."

J. G. COLMER,
Secretary High Commissioner.

London, England.

---

DEAR SIR,—There is an increasing demand throughout the United Kingdom for all kinds of Canadian hard and soft woods, and our chief trouble has been to keep our customers supplied. We have had large consignments during this year from our own limits in Canada, but are still very much behind with some of our orders. We are desirous of communicating with reliable firms who are prepared to fill export bills according to the required specifications of this country's markets. We can give orders for almost every kind of wood that grows in a Canadian forest, furnish prompt returns for shipments, and supply undeniable references on your side as well as on this. We have a steady demand for oak, ash, rock elm, soft elm, maple, basswood, birch, beech, chestnut, doors, etc., and are prepared to place large contracts with reliable operators who can ship any of the above mentioned woods either in lumber or cut to specification. Our inspectors in Canada are thoroughly conversant with the requirements of this country and would gladly furnish all particulars as to the culling, etc., required for this market. Last year we handled from 200 to 250 large consigments of Canadian woods, and are doing our utmost to further this trade with Canada. We have received recently a large enquiry for willow. Do you know of any firm who handles this wood ?

We cannot see why the Canadians should not capture the paper market of England. It is an undeniable fact that the Americans are taking away the trade of the paper manufucturers in this country. It is also a well known fact that American paper is made from Canadian pulpwood. This trade belongs to the Canadians, and if they don't secure it they have themselves to blame, as they have the raw material and as good natural facilities for manufacturing as the Americans, and quite as good freight rates to this country. The writer remembers, a bout two years ago, while travelling on the north shore of Lake Superior, having seen hundreds of thousands of loads of spruce destined for the American paper mills, and he believes the same applies to all parts of Canada, as we ourselves have recently received tempting offers from American paper manufacturers for the pulpwood on our Canadian limits. The writer believes plenty of money could be raised in England for the industry of paper manufacturing in Canada should a proper prospectus be shown.

THE M. TIMBER COMPANY OF CANADA.
London, England.

---

DEAR SIR,—Before enumerating the various descriptions of timber which find here a ready demand, we beg to point out that no other industrial centre in the United Kingdom presents a more desirable outlet for the products of those who are interested in the timber trade and engaged in its manufacture in the Dominion of Canada. As the chief seat of the shipbuilding industry in this country, our city does a large trade in every kind of wood manufactured and exported from Canada. The imports to the Clyde are large and increasing, and as far as present appearances indicate are likely to continue doing so. The existing demand for nearly all Canadian woods is very good ; for some it is even brisk. We believe, therefore, that there is great scope in this market for a large development in business in Canadian timber, and for the information of your lumber manufacturers we beg to enclose a memorandum of the woods which are most extensively used here.

WANEY BOARDWOOD. — This timber is in constant demand by shipbuilders and house builders, and is regulated in price by size and quality. Work at present is plentiful in each of these departments of trade, with every prospect of being maintained, and as stocks are lighter than they were at the same period a year ago, our anticipations are most likely to be realized.

SQUARE WHITE PINE.—The enquiry for this timber is only moderate. Like the boardwood, the better quality of it is used mostly for finishing purposes in houses and ships, and it always commands a good price.

RED PINE.—At one time a considerable quantity of this wood went into consumption for joisting, etc., but it seems to be out of favor now, and superseded by pitch pine. Still a fair consumption takes place annually.

ELM.—Elm is largely used by shipbuilders, and the stock on hand not being excessive, rather, indeed, under what it was at the same time last year, points to the continuance of a fair demand, especially for large wood.

OAK LOGS AND PLANKS.—The former are used in ship building and railway and wagon building, and the planks chiefly for the latter industry, which is a very important one in this vicinity, and large quantities of various specifications are taken up.

ASH.—This is mostly used by cabinet makers in the manufacture of bedroom furniture, and also for drawer wood. The demand is always more or less active.

BIRCH goes largely into chair making, and there is a better demand than existed some few months ago both for logs and planks, boards and squares.

WHITE PINE DEALS.—There is always a large demand for these in the different sizes and grades of quality. At the beginning of the year, in consequence of large stocks, prices ruled low, but the present very brisk condition of our principal industries has greatly improved matters. First quality are used to a large extent for finishing purposes, such as panelling in house doors, ships, etc., and also for pattern wood for engineers. Second quality, though in fair demand, is not so much used as firsts or thirds, and the imports are therefore on a smaller scale. In third quality deals there is a very large consumption amongst joiners, boat builders, packing box makers, etc., and good sound planks can always be sold at their value. Fourth quality deals, both broad and narrow, are mostly used by packing box makers, but the low price, as compared with thirds, makes them in demand also by the smaller class of furniture makers.

WHITE PINE SIDINGS.—Large quantities of these are imported to this market. Since their introduction here in recent years there has been a great demand for them,

and as they are in favor with consumers the demand is constantly growing.

Spruce Deals.—Large stocks were held at the close of last year, but these have been greatly reduced through the improvement in trade during the interval, and the demand is now very good.

Cant & Kemp.

Glasgow, Scotland.

---

Another correspondent furnishes the following information regarding the British market :

"The timber business of Canada with this country is not only a large one, but as you must be aware, one of the oldest trades carried on between them. All the existing demands for lumber are anticipated in the fall and winter. During these months there is hardly a shipping house from Ottawa to Halifax that is not represented in this country either personally or by their agents. From waney board pine timber down to manufactured goods, such as doors and other descriptions of joinery, all kinds of lumber are pressed upon the markets, often to an unwarrantable extent. Not content with making their contracts for the season's shipment, we find, as a general rule, that having filled up all their forward bills, shippers then proceed to unload themselves in the autumn of their unsold stocks by consigning them upon the large markets, such as London, Liverpool, Glasgow, Cardiff, etc., where they are sold for what they will bring. This is not an isolated example of Canadian shippers' methods—it has occurred over and over again, especially during the past few years. One result of this is that the large importers here are inclined to deal very warily in entering into engagements ahead lest they be swamped with cheap consignments. That this was their policy last winter was best shown by the fact that shippers of all kinds of lumber from Montreal and Quebec returned home this summer with the most meagre orders they have had for many a year. These remarks apply with equal, even if not with greater, force to the spruce deal shippers of New Brunswick and Nova Scotia. During the past year their action in this direction caused a fall in the market of about 25s per St. Petersburg standard. Having filled all the orders they could secure at £7 c.i.f., the price ruling in January, 1897, they swamped not only the large markets of this country, such as mentioned above, but actually sent cargoes into small ports in Ireland to be sold against the goods of their own contractors. The result of this is self-evident ; under the pressure to sell these consignments prices gave way and importers had either to sell out their stocks at competing prices or hold them to look at. Very few are in a financial position strong enough to do the latter, hence losses and in some cases absolute failure."

# THE WEST INDIA ISLANDS

The West India Islands, having an area of 94,000 square miles and a population of several millions, is each year receiving greater attention from Canadian lumber manufacturers. The exports are chiefly from New Brunswick and Nova Scotia. Particulars of the requirements of a number of the islands are given herewith, and will repay careful perusal :

## BARBADOS.

Although the houses, sugar factories and many other buildings in Barbados are built of stone and brick, covered with iron, slate and shingles, yet a fair quantity of timber is consumed. The following figures show the total import of white pine, spruce, hemlock, birch and beech for three years, together with the quantity supplied by Canada :

| | 1895. | 1896. | 1897. |
|---|---|---|---|
| Total Import... | 3,622,547 ft. | 5,898,722 ft. | 8,129,225 ft. |
| From Canada.. | 3,383,195 ft. | 5,230,184 ft. | 6,815,577 ft. |

From the above it will be seen that this market is yearly growing in importance. There is used a large quantity in the making of hogsheads and puncheons, in which the sole product of the island, sugar, is shipped. The consumption is therefore dependent in a great measure on the crop, as from 1½ to 2 million feet, principally spruce, is used in this way.

White pine is used throughout the year, and imported in cargoes of 150,000 to 200,000 feet. The local inspection makes three qualities, shippers, refuse and second quality. The first named consists of boards of 10 feet contents and upwards without sap, of not less than 8 inches wide. Refuse is what is culled from the shippers as not being quite up to that grade, and may contain boards of nine feet contents without sap, or boards of 10 feet contents and upwards with sap, but the sap must not extend across the board, that is, must leave six inches of heart lumber throughout the entire length of the board. Second quality, so-called, is inferior to refuse, and consists of boards of 8 feet contents and under, or boards of larger contents in which the sap does not leave six inches of heart lumber, or has streaks of rot, but in which the rot has not eaten into the board. An allowance of 5 per cent. for splits on shippers is customary. Refuse usually brings $3 per thousand less than shippers, and second quality from $3 to $4 less than refuse. Very little plank is required, not more than 5% of cargo, and it must be of good quality.

Spruce is principally used from February to June, during the crop season, and is imported in cargoes of 150 M to 200 M. There are only two grades, merchantable and second quality. No allowance is made for refuse ; only boards of 6 in. and under, and very much shivered, are thrown out, and bring about $3 per M less. No allowance is made for splits. Scantling is used in very few sizes, such as 2×3, 2×5, 2×6, and in the following proportion, say 25 M 2×3, 5 M 2×5 and 5 M 2×6.

Shingles : Cedar Laying sawn, 4 bundles to 1 M, are largely used, and principally No. 1 extra. Spruce Laying sawn in small quantities are saleable. Long Cedar Split are saleable ; they must be of good quality, 100 to the bundle, and about 20 in. long.

The terms of sale are 3 months' credit to the local buyer. Sales being rendered on completion of delivery are subject to 1½ per cent. discount and 5 per cent. commission, which is really 2½ per cent. selling and 2½ per cent. guarantee, and a small charge of about 15 cents for delivering. The duty on white pine and spruce lumber is $1.20 per thousand feet. Shipments should be made whenever possible by sailers instead of steamers, for convenience of landing, and cargoes should contain about one-third first quality.

## TRINIDAD.

This colony is fairly well supplied with hardwoods of its own growth, supplemented by some imports from the near coast of Venezuela and British Guiana, which amounted in 1897 to 76,825 superficial feet only. Formerly, when the sugar crop was shipped in hogsheads, there was a large importation of cooperage materials. Now hogsheads have been displaced by bags, so that for last year imports were reduced to only 113,000 white oak staves, 1856 bundles shooks and 53,400 wood hoops. Shingles were also largely imported formerly, but last year were reduced to 63,500 pieces, their use now being displaced by galvanized iron. The importation of lumber is therefore practically limited to pitch pine, white pine and spruce, coming from the United States and Canada. The total imports of the three kinds in 1897 were 11,488,375 superficial feet. Of this 10,402,101 came from the United States and only 1,086,274 direct from Canada. The consumption of each kind is estimated to be about as follows : Pitch pine, 30% ; white pine, 55% ; spruce, 15%.

The description of lumber received from Canadian ports is what is known as ordinary shipping boards and planks, 8 inches wide and 2 inches thick. Assortments should not include more than 10% plank. The lumber usually measures from 10 ft. to 22 ft. superficial for board, and of course double for plank. An average of 14 ft. contents for boards is considered good. More than 1 inch of sap on the pieces, or red rot, however little, makes the lumber refuse, and splits of more than three running feet, broken lumber, whilst sizes under 10 ft. superficial for boards, and 20 ft. for planks, are also rejected. The width of the lumber should be from 7 inches up to 15 and 16, or even 18 inches for ordinary quality, but dimensions such as obtain in the lumber received from the United States, say 12 ft. lengths, by 10 and 12 inches wide, will always command a preference with buyers and bring higher prices, as these shipments are always sized and run very regular in length and width, as above.

An allowance of 5% for splits is customary, but in some instances is waived by purchasers. Ordinary sales are made subject to allowance for split. The contents of each board or plank should be legibly marked at one end of the piece, in colored pencil or chalk. Any piece less than 7 inches wide, or under 10 ft. contents board and 20 ft. plank, are considered refuse and rejected as such. The customary difference between good merchantable lumber and refuse is from $4 to $5 per M ft.

The import duty on lumber into Trinidad is $2 per M ft., irrespective of quality or whence imported. The proportion of white pine used in Trinidad in comparison with spruce is fully 3 to 1. The average value of Canadian lumber is $18 to $19 per M for merchantable white pine, and $15 to $16 for spruce.

Much lumber the product of Canadian mills is shipped through United States ports and classed as American lumber. It can usually be obtained cheaper than by direct shipments. This is explained by the difference in freight. The United States have the practical monopoly of the supply of breadstuffs to Trinidad, and the vessels taking flour, etc., carry deck loads of lumber at cheap rates. Thus the one trade facilitates the other. There does not seem to be any good reason, however, why our lumber should not be shipped direct.

## JAMAICA.

Nearly nine-tenths of the lumber used in Jamaica is pitch pine from the United States. The total imports for the year ending March 31st, 1898, as furnished by the Collector-General at Kingston, were as follows :

| Whence Imported. | Pitch Pine. Feet. | White Pine. Feet. | Cypress Shingles. No. | Boston Chips and other Sorts. No. |
|---|---|---|---|---|
| United Kingdom.. | 176 | ..... | ..... | ..... |
| U. S. America.... | 6,740,947 | 2,516,876 | 3,444,319 | 93,675 |
| Canada ..... | 13,486 | 230,031 | ..... | 144,200 |
| British East Indies | 150 | ..... | ..... | ..... |
| Total ..... | 6,754,759 | 2,746,907 | 3,444,319 | 237,875 |

These figures show the small quantity supplied by Canada, and the possibilities of that market for our manufacturers and exporters. Concerning the Jamaica market a correspondent says : "A small proportion of white pine only is used. This comes from New York, but I think it is manufactured in Canada. A very small proportion comes from Nova Scotia, also some spruce, but the quality of the wood that comes from New York is far superior to that which comes from Nova Scotia, the former being all 12" wide, 12, 14 and 16 feet long, while the latter runs from 5" to 16" in width and 10 to 30 feet in length. Seven or eight years ago as much white pine was sold as pitch pine, but the drop in the price of pitch pine, while the price of white pine remained about the same, has no doubt caused the sale of the one to increase while the other decreased. I have often wondered why it is that Canadian manufactured lumber can be sent here through New York commission houses at far lower rates than it is possible to get it direct ; in fact, it is almost impossible to get the same description of boards direct from Canada, although they are manufactured there. This is a matter that should be looked into."

## ST. LUCIA.

The quality of lumber used on this island is all Canadian white pine of 1 and 2 inches by 12 inches and upwards. For some years past it has been found more profitable to import the lumber from New York instead of the Maritime provinces, on account of the cheap freight by steamers from that city. Spruce and hemlock are not used there, and the only other kind of lumber imported is yellow pine from the Southern States. The yearly quantity of both qualities imported amounts to about one and one-half million feet.

Regarding this market, Mr. Sainval Coipel, of St. Pierre, writes : "White pine lumber is imported exclusively from New York, in boards and planks of an average of 16 feet for the former and 32 feet for the latter, their respective thickness being of 1 and 2 inches, and the width varying between 10 and 14 inches. The lumber is of pretty fair quality, not very knotty and almost free of sap. Being myself engaged in the trade as a wholesale dealer, and having very good connections with several New Brunswick firms, I have tried to secure a share of the business for my friends, but to my great regret, they have never been able to send the right article ; it seems as though they cannot get boards of suitable widths. Otherwise, I have not the least doubt that they could compete successfully with the New York shippers. I would, therefore, be glad to place a trial order with some good reliable firm. For spruce there is no demand with us. This description of lumber was used mostly for heading, when our planters were manufacturing Muscovada sugar ; now that they make white crystals only,

they require a special kind of wood for their packages, and spruce is in consequence entirely neglected.

### DEMARARA.

In the year 1897 this island imported 4,463,673 feet of white pine and 934,439 feet of pitch pine, on which the duty was $3 per thousand feet. The white pine sold at from $21 to $24, refuse bringing $17. The average price for pitch pine was $23. Some shingles were also imported. White pine is imported in about the proportion of 20 per cent. of 2 inch plank and 80 per cent. of 1 inch boards, 12 to 16 ft. long, which is received principally from New York and Portland, and much of it is known to be Canadian lumber. The trade in Nova Scotia, at one time large, has decreased of late. Spruce and hemlock do not appear to be in demand.

Messrs. Merwin, Woods & Co., Fredericksted, write: "This market is too small to receive cargoes of lumber. We, ourselves, from time to time, order small quantities of white pine boards from Halifax when we have any difficulty with freights by steamer from New York, but we always find that the Canadian lumber is not uniform in thickness; that is, we require, as well as the other West Indian islands, boards 12 inches wide, from 14 to 16 feet in length and one inch in thickness. The Canadian lumber, as a rule, when ordered for one inch, is either one inch scant or one inch too full, i.e., 1 1/16, all mixed together, which is not satisfactory to the carpenters here; in consequence New York lumber for general purposes, though costing more, is preferred. The only importers, Messrs. Bartram Bros., get their lumber exclusively from New York. We only order from twenty to thirty thousand feet at a time, which is sufficient for our needs."

### CUBA AND PORTO RICO.

It is expected that the lumber trade of Cuba and Porto Rico will immediately revive now that peace has been restored. Buildings will be reconstructed, and much of the lumber required therefor will be imported. The native timber is entirely of the hardwood variety, more suited to the requirements of the shipbuilder, cabinet, furniture and implement manufacturer. The principal woods are mahogany and cedar, the latter being exported to some extent, but the expense of logging, estimated at $50 per thousand feet, has prevented the expansion of the industry.

In the year 1893 Cuba and Porto Rico imported over $70,000,000 worth of merchandise, the greater quantity from the United States and Spain. Steadily since that year the imports have declined, until in 1896 they reached only $50,000,000. Lumber has been imported almost entirely from the Southern States, and consists chiefly of pitch pine. Statistics show that in the year 1893 Cuba received the following: 29,000,000 feet of boards, deals and plank; 3,300,000 feet of joists and scantling; 232,000 shingles; $24,000 worth of hoops; $152,000 worth of shooks; $66,000 worth of staves and heading, and $63,000 worth of all other lumber. For the same year the imports into Porto Rico were: 8,000,000 feet of boards, deals and plank; 1,000,000 feet of joists and scantling; 65,000 shingles; shooks, $76,000 worth; hoops, $8,000; staves and heading, $28,000; all other lumber, $4,600; and a comparatively very small quantity of sawed and hewn timber and logs. Doors, sash, blinds and house finishings aggregated $8,900 for Cuba and $2,400 for Porto Rico; hogsheads and barrels, $74,000 to the former and $2,000 to the latter; household furniture, $217,000 and $25,000 respectively; woodenware, $12,000 and $1,000, and all other manufactures of wood, $133,000 and $4,000 respectively. These figures, while representing the imports of one of the most prosperous years, show the extent and importance of the market, to which attention might well be given by Canadian exporters. Spruce and white pine would be favorably received.

According to the proclamation of the President of the United States, the duty on lumber will be about as follows: Staves, per 1,000, 2 pesos; boards, deals, etc., round wood and timber for shipbuilding, per cubic metre, 1 pesos; planed or dove-tailed, broomsticks and cases wherein imported goods were packed, per 100 kilos, 0.40 pesos; cabinet-makers' woods in deals, boards or logs, per 100 kilos, 3 pesos, sawed in veneers, 4.35 pesos; furniture or bent wood, per 100 kilos, 10 pesos; upholstered furniture, 0.60 pesos; common joinery, 2 pesos. The peso is the Spanish dollar, gold, and its value is 92.6 cents of Canadian money. The kilo is equivalent to 2,204 pounds.

### ANTIGUA.

Following is a return showing the quantity of lumber, shingles, staves and shooks imported into Antigua for five years, from 1893 to 1897:

| Year. | Pitch Pine. Feet. | White Pine and Spruce. Feet. | Shingles. Cedar and Pine. | Shingles. Cypress. | Shooks. | Staves. |
|---|---|---|---|---|---|---|
| 1893. | 457,947 U. S. | 602,900 B. N. A.<br>850,876 U. S.<br>1,000 U. K. | 680,000 B. N. A.<br>797,250 U. S.<br>16,500 W. Islands. | 480,450 U. S. | 8,148 U. S.<br>2,981 B. N. A. | 4,800 Bdos. |

The lumber most in demand is pitch pine scantling, 2 x 3 to 6 square; pitch pine plank, 2 inches thick; pitch pine boards for flooring, 1 inch thick, 6 inches wide; white pine and spruce plank, 2 inches thick; white pine and spruce boards, 1 inch thick, 12 inches wide.

## MEXICO

### THE MEXICAN LUMBER TRADE.

By Percy L. Robinson, Mexico City.

As is well known, Mexico furnishes a large variety of dye and cabinet woods, which grow in the coast countries, these woods finding their present markets in New York, San Francisco and European ports. Pine and oak, used entirely for home consumption, are found mainly on the great plateau and are almost invariably inferior to similar lumber from northern latitudes; therefore the latter will always find a ready market in Mexico at satisfactory prices. A potent factor in the Mexican lumber industry is the difficulty of securing satisfactory cutting rights, owing to the inaccessibility of the forests and the fact that these are usually the property of Indian tribes, who hold them in common.

At present nearly all importations of lumber into Mexico come from the United States, the principal reason of this being the proximity of one country to the other, and consequently cheaper transportation than obtains between Mexico and any other country which might share the trade.

At present most of the best oak is shipped from Memphis, Tenn., and St. Louis, Mo., and is worth here about $200 Mexican currency per 1,000 feet, the carload freight rates to the frontier being 28 cents gold per 100 lbs. from Memphis, and 33 cents from St. Louis, and from the frontier to Mexico City and common points $16 Mexican currency per 1,000 kilograms, which is equal to about 33 cents gold per 100 lbs. at present rate of exchange, 120 premium. This makes a through rate of 61 cents gold per 100 lbs. from Memphis and 66 cents from St. Louis.

The bulk of imported lumber, however, is pine, and a general idea of its price in this republic will be given by the present retail price in Mexico City of tongued and grooved planed pine, namely, $60 to $65 Mexican currency per 1,000 feet, and $55 for flooring and ceiling. Most of the pine comes from Texas and Louisiana, either all rail or via Mexican gulf ports; the present car load freight rates from mill points to the frontier being 18 cents gold per 100 lbs. plus the 33 cent rate to Mexican City and common points, which makes a through rate of 51 cents gold per 100 lbs.

The lumber carload freight rate from New York by steamer and rail to Mexico City and common points is 60 cents gold per 100 lbs., and on Canadian shipments the rate from point of origin to New York would have to be added, not to mention the expense of bonding through the United States.

It will thus be seen that, with the present transportation facilities and rates of freight, there is little opening for the sale of Canadian lumber in Mexico, but should a direct line of carriers be established between Canadian and Mexican ports, Canadian lumber merchants should be able to build up a very good trade with this Republic.

The following table shows the amount (in Mexican currency) and nature of the importations of lumber into the Republic of Mexico, during the fiscal years of 1895-6 and 1896-7:

| Class of lumber. | Fiscal year 1895-6. Weight in kilograms | Fiscal year 1895-6. Inv. value Mexican silver | Fiscal year 1896-7. Weight in kilograms | Fiscal year 1896-7. Inv. value Mexican silver |
|---|---|---|---|---|
| NON-DUTIABLE. | | | | |
| Ordinary boards, beams, scantling, etc., in the rough | 78,759,131 | $ 612,819 | 89,951,478 | $ 724,817 |
| Railway Ties | 14,176,850 | 110,710 | 20,880,959 | 110,509 |
| Box lumber and boxes | 6,431,457 | 153,070 | 4,741,582 | 120,206 |
| Barrels and staves | | 39,700 | | 27,002 |
| Other non-dutiable lumber | 2,272,781 | 50,145 | 2,540,285 | 43,582 |
| DUTIABLE. | | | | |
| Tongued and grooved planed boards. Duty $1 Mexican currency per 100 square meters | Measurement in sq. meters. 2,150,103 | 129,754 | Measurement in sq. meters. 6,380,168 | 357,578 |
| Fine lumber, planed, all kinds, paying various duties | Weight in kilograms 174,547 | 12,003 | Weight in kilograms 159,507 | 10,487 |
| | | $1,105,003 | | $1,400,961 |

## SOUTH AMERICA

Some of the South American Republics are becoming important markets for Canadian lumber. Several cargoes of pine and spruce are shipped annually from the port of Montreal, while the shipments from New Brunswick and Nova Scotia represent no small quantity. Of the latter no records are available, but it is known that some firms are engaged in that trade almost exclusively.

### ARGENTINA.

In the year 1897 our direct exports of lumber to Argentina was valued at $538,000, an increase of over $100,000 over the previous year. Mr. Edmund E. Sheppard, Trade Commissioner to South America, reports that this trade can be very largely increased, as the woods of that country suitable for lumber are grown nearly altogether in the south towards Patagonia, and are very heavy and not adapted to the purposes for which white pine is used. Spruce is brought nearly altogether from Maine, and handling it is already a very large business. The export of portions of houses already prepared is successful in but few countries, owing to the tariffs, but the export of white pine lumber to Argentina, there to be milled and made into doors and sashes and frames in the yard where it is received, should be a very profitable business, for of all the countries of the south, Argentina is most rapidly increasing in population, the stretches of arable land being enormous, and the erection of small dwellings proceeding at a very rapid rate. The export to Argentina of lumber suitable for the fitting of

cattle vessels is also an important feature. The city of Buenos Ayres has a population of 700,000, and other principal cities are being built up very rapidly. The duty on spruce and white pine is about $5.35 per thousand feet.

## URUGUAY.

In the year 1896 the total imports of timber into Uruguay represented a valuation of $771,000. Of this sum pine accounted for $517,000, of which $500,000 was from the United States.

## BRAZIL.

Last year Brazil imported Canadian lumber to the value of $52,000. Owing to the fact that an insect attacks white pine and burrows through it until it is almost like a handful of ashes, that lumber is little used except for decorative purposes and doors and windows, where it is needed for its lightness, and is protected by varnishes and paint. In the interior and the southern parts of the country the importation of material suitable for window frames and doors should be very large. Of yellow pine there is imported annually about 30,000,000 feet, which realizes about $25 net per thousand. This is also an average price for Canadian boards. The Canadian commissioner states that our trade is hampered by the fact that large ships from United States ports load partly with lumber and partly with kerosene, preferring to mix their cargoes, while mixed cargoes from Canadian ports are hard to obtain.

## PERU.

This republic is showing many elements of prosperity, and is likely to prove a good market for Canadian lumber. This is also true of Eucador, the chief seaport of which, Guayaquil, was recently destroyed by fire and is being rebuilt nearly altogether with wood. The lumber now used is obtained chiefly from San Francisco.

## CHILE.

The timber importations of Chile are in the neighborhood of one million dollars annually, the bulk of which is supplied by the United States. The Chilian lumber is practically all hardwood. The methods of lumbering are very crude, as the result of which the native timber has not had the sale which would otherwise have been the case. The present condition of the country is favorable to an extension of the Canadian lumber trade, particularly in pine and spruce, although the native timber is protected by a substantial duty. The principal drawback to exports of pine and other timber from Canada is that there are no direct means of communication. Supplies of white pine, etc., are first shipped to New York or other United States ports, and hence by steamer, resulting in immense increase in freight and other charges, constituting almost the preclusion of the use of the lumber except on a limited scale. If direct shipments were made of such classes of lumber as could compete with Oregon pine for building purposes, undoubtedly a satisfactory trade would be brought about.

Below will be found an interesting letter from Mr. Lewis E. Thompson, Commercial Agent:

Dear Sir,—Oregon pine was imported here in large quantities up to end of 1896, since which time importation has decreased, owing to the fact that building operations are very limited. A fairly good market is at all times open here for good quality of rived oak staves, of which large quantities are consumed yearly for making wine casks and barrels of different sizes. These staves are imported from New York principally, although small lots are also brought from France, and there is no reason why Canadian staves should not find a good market here also, providing the dimensions and quality are satisfactory.

The same remarks apply also to oak planks of 1½", 2", 3" and 4" thick, and of any width up to 16" or 18", lengths from 12 to 18 feet; also white pine and ash of the same dimensions, all of 1st quality, will find a market, in case these can be delivered at same or lower prices than American lumber of same class.

Box Shooks.—Two large consumers of empty boxes have been importing these for several years from England, and I notice that these shooks are made of Nova Scotia or New Brunswick spruce, evidently resawed for boxes in England; without doubt these shooks could be delivered here direct from Canada much cheaper than is actually the case when they are imported from England, where the cost of making the boxes from deals must be considerable, added to freights and intermediate profits of dealers. The exterior dimensions of these boxes are as follows: Heads, 14½" x 7¾" x 11/16"; sides, 23¼" x 7¾" x 7/16"; T. and B., 23¼" x 7⅝" x 7/16"—all unplaned, but very well and smoothly cut to exact dimensions and neatly packed in complete sets. The tops and bottoms are composed of two pieces each, consequently the width of the box is 15¼" outside measurement.

Canadian merchandise in general labors under the disadvantage of being, in most cases, shipped from New York, and is consequently looked upon as American merchandise, thus placing Canadian products in Chilian statistics as tributary to United States. If complete cargoes of lumber, composed of staves, shooks, oak, ash, white pine and walnut, could be made up in Montreal, I think a good trade could be established between that port and Valparaiso, as return freights of nitrate of soda could be secured for these vessels which engage in this venture.

Should it not be possible or convenient to send full cargoes of lumber, other merchandise, such as agricultural machinery and general goods, could be introduced here with the same facilities which offer for American goods.

The writer is in touch with most of the large lumber importers here, and would suggest that intending exporters send me a list of prices for the lumber above mentioned, free on board in Montreal or New York, prices to be net and without the intervention of middlemen or commission agents, and with this data at hand the writer will make it a point to consult the importers and see if there is a possibility of introducing Canadian lumber here with any degree of profit and success.

It is my impression that a year or two must pass before there will be any considerable demand for Oregon or British Columbia pine, as the restriction in building operations, and also the suspension of all public works, has reduced the demand surprisingly. The greater part of the west coast trade in lumber is, I believe, transacted in San Francisco, and I have been informed that a syndicate has complete control over the entire production of Puget Sound and British Columbia in general.

Lewis E. Thompson.

Santiago, Chile.

# AUSTRALIA.

While Australia possesses a forest area of some extent, the governments of several colonies have lately awakened to the fact that the supply will suffice only for a very few years. In addition to her native supply, Australia has for a number of years imported a large quantity of foreign timber, chiefly from the Pacific coast. The chief supplies are received from the United States, New Zealand and Norway, although last year there were shipped from British Columbia lumber to the value of nearly $200,000. Much complaint has been made that inferior stock has been thrust upon the market, and this has operated against the interests of Canadian shippers.

The bulk of the dressed lumber received in Australia is from Norway and Sweden. It consists of flooring, siding and shelving, and it is said to be full of small and tight knots, which, of course, are objectionable. It is believed that if Canadian mill owners and exporters would push the business vigorously, a large trade in flooring could be secured in Australia, and especially the colony of New South Wales. The Baltic flooring is 6 × ⅞; the British Columbia is dressed out of 6 × 1, and is therefore ½ an inch narrower than the Baltic. The latter is quoted at 13s. 6d. per one hundred superficial feet, while Oregon, by which the B.C. product is known, has sold at 11s., but 11s. 6d. would be paid for it if it could be had.

It is probable that a moderate trade in doors could be secured from Australia by properly directed effort on the part of our manufacturers. These goods are now obtained mainly from San Francisco, the quotations being about as follows:

| Size. | | | |
|---|---|---|---|
| 2′ 6″ | × 6′ 6″ | × 1¼″, double moulded | $2.50 |
| 2 6 | × 6 6 | × 1½ ″ | 2.75 |
| 2 8 | × 6 8 | × 1¼ ″ | 2.75 |
| 2 8 | × 6 8 | × 1½ ″ | 3.00 |
| 2 8 | × 6 8 | × 1¾ ″ | 3.50 |
| 2 10 | × 6 10 | × 1½ ″ | 3.25 |
| 2 10 | × 6 10 | × 1¾ ″ | 4.00 |

Less a discount of 40%, 5% and 2½% cash.

The sizes most used are 2′ 6″ and 2′ 8″ × 1½". In shooks and staves there is also an opening for trade. We are advised that the desire of importers is to deal direct with the mill owner or shipper.

In the following letter the importations by Victoria and New South Wales for the years 1896 and 1897 are reviewed:

Sydney, New South Wales, August 12th, 1898.

Dear Sir,—It is only possible to give you the figures respecting the timber trade of New South Wales and Victoria, as these are the only colonies for which the trade returns of 1897 are to hand.

### NEW SOUTH WALES.

The importations of timber for the years 1896 and 1897 were:

| | 1897. | | 1896. | |
|---|---|---|---|---|
| | Feet. | Value. | Feet. | Value. |
| Timber, rough. | 67,265,849 | £328,753 | 52,668,742 | £268,742 |
| " dressed | 8,723,450 | 65,567 | 6,619,688 | 47,957 |

Of these amounts the imports from Canada and the United States were:

Rough Timber.

| | 1897. | | 1896. | |
|---|---|---|---|---|
| | Feet. | Value. | Feet. | Value. |
| Canada..... | 2,273,557 | £ 8,317 | 1,998,916 | £ 6,963 |
| United States. | 25,513,065 | 106,962 | 21,753,448 | 95,780 |

Dressed Timber.

| | | | | |
|---|---|---|---|---|
| Canada..... | 161,919 | £ 920 | 80,733 | £ 471 |
| United States.. | 1,495,318 | 10,171 | 400,958 | 3,755 |

In addition, there went into Broken Hill, via South Australia, and credited to that colony, 18,654,941 feet of rough and 504,005 feet of dressed timber. This, or nearly all of it, came from the Pacific coast of Canada or the United States. It was mainly what is known here as "Oregon," for timbering the mines.

Other items were sent by Canada to the following values:

| | 1897. | | 1896. | |
|---|---|---|---|---|
| | Canada. | United States. | Canada. | United States. |
| Laths..... | £342 | £2,251 | £250 | £3,316 |
| Palings..... | 80 | 1,683 | ... | ..... |
| Shooks and staves... | 360 | 1,639 | 235 | 1,231 |

There were imported into this colony last year 36,999 doors, valued at £15,715, all but 1,400 coming from the United States.

These figures require but little comment. They show the extent of the market, the relatively small proportion that falls to Canada, the marked improvement of the trade of 1897 over 1896, and that Canada shared in it. The values show that prices in 1897 were rather better than in the previous year.

A year ago I sent you the sizes and prices of doors imported here, and stated that I should be glad to hear from Canadian manufacturers respecting the possibilities of the trade. The doors, then as last year, came from California, and were made of sugar pine. Some attempts have been made to introduce cedar doors from British Columbia, but as there is a prejudice against that timber, the experiment failed. A representative of the British Columbia Milling and Trading Company is expected here shortly, and on his arrival steps may be taken to ascertain whether this prejudice cannot be overcome. When I wrote you and also to some eastern mills respecting doors, the ordinary freight was too high to enable a profitable trade being done. My idea was to have prices and other information ready, so that should a more favorable opportunity occur, advantage could be taken of it. Unfortunately, no one replied to my letters, and the party here that I interested in the matter opened up communication with New York houses, and when freight rates went down to about forty per cent. of the former figures, doors were shipped here. Whether this will result in an extensive trade has yet to be determined, as much will depend on the relative rates of freight between San Francisco and New York and Sydney.

The figures show the very small proportion of dressed lumber supplied by Canada. Two years ago I anticipated the amount would be much increased. Had the Canadian steamers not secured more profitable freight, there is no doubt that the hope would have been realized. The demand for it certainly improved, but as it seemed impossible to get cargo space in Vancouver, the orders were sent to San Francisco, dressed spruce in the shape of shelving coming from that port. If the sugar trade between Canada and Queensland should develop as it now promises to do, it will require additional shipping, and the

B. C. millmen will have very much better facilities for getting into this market.

VICTORIA.

This being a protectionist colony, the duties on dressed and manufactured lumber, and the fact that in the tariff "Oregon" is discriminated against, affects the importations and limits them largely to deals and other undressed stuff. The importations of the classes in which Canada is or might be interested were :

| | 1897. Feet. | 1896. Feet. |
|---|---|---|
| Deals, total | 2,061,900 | 4,429,600 |
| From Canada | 884,900 | 2,400,700 |
| " Norway and Sweden | 954,900 | 1,831,100 |
| Laths, total number | 995,400 | 1,006,000 |
| From United States | 736,900 | 1,002,000 |
| " Canada | 249,000 | ..... |
| Oregon, total | 10,130,000 | 11,318,000 |
| From Canada | 4,116,000 | 3,242,100 |
| Staves, number | 562,133 | 245,923 |
| From United States | 366,220 | 105,480 |
| Undressed timber, total | 16,942,600 | 17,743,100 |
| From Canada East | ..... | 2,400 |
| " United States East | 1,258,300 | 858,400 |
| " " " West | 1,746,900 | 1,074,700 |
| " New Zealand | 11,994,300 | 13,329,000 |
| " Norway and Sweden | 220,400 | 1,082,900 |

It will be seen that there was not much change in the trade of the two years. The largest decrease is in deals, both Canada and Norway and Sweden sharing. There was a demand for spruce deals, but freight rates were high, and this stopped business. The Canadian trade would be much improved by a reciprocal tariff between Canada and Victoria. The duty on Oregon and the free admission of all other undressed timber bears more heavily on the west coast trade of Canada than on that of the United States. Having redwood and sugar pine admitted free, it is easier to make up a cargo in San Francisco than in Victoria. Spruce should find a market in Victoria and take the place of Baltic lining and shelving, as it does in Sydney when it can be had.

Business is improving in Victoria. There appears to be a slow but steady recovery from the crisis of five years ago, and should it be blessed with fair harvest, of which there is now a good prospect, the trade of next year will show a decided advance over that of this or several previous ones. When it is remembered that a large part of its area has suffered from drought for three years, ruining its harvests and lessening its output of wool and butter, its present condition is remarkably good. With more favorable seasons there will be a resumption of building, although mostly like the extent that characterized the boom years prior to '93, and a larger demand for lumber.

J. S. LARKE,
Canadian Commissioner.

## SOUTH AFRICA

IN South Africa there is quite a promising market for Canadian timber products, in which our exports have increased during the past two years. This may be said to be a new field, as it is only within recent time that any considerable shipments from Canada have been made. There is, we believe, a good market there for spruce and pine deals, scantling, doors, sashes, blinds and other manufactures of wood, while a limited quantity of red pine, elm, ash and oak logs could be placed. The consumption of hardwoods in British South Africa will no doubt gradually increase, as the furniture and other industries using this class of raw material are fast developing. In deals 16 feet is the average length for the Cape Town market.

One essential feature in securing a more extensive trade for Canadian lumber manufacturers is that the goods should be placed on the market at a reasonable cost, as competition from Baltic woods is very keen. The attention of the trade is directed to the following letter :

24 WALE STREET, CAPE TOWN, SOUTH AFRICA,
August 1st, 1898.

SIR,—Since my last letter appeared in your journal, considerable improvement has taken place in the timber trade between Canada and South Africa, and I am pleased to note that cargoes from both the Atlantic and Pacific ends of the Dominion have arrived and are still coming, and at this time Canada, with her timber and other products, is better known in this part of the world than ever heretofore. The transactions of the past two years have also had the effect of bringing the two colonies into closer relations, and of seemingly reducing the mileage between them, and I have no hesitation in hazarding the statement that in the past twelve months the number of letters and cables passed between South Africa and Canada will show an increase of tenfold over any previous like period.

All this would indicate that business has begun to be done, and in my opinion it will continue so long as Canadians remain alive to their interests here, and no longer. With the exception of the timber trade, all cargoes have been coming, thus far, through the port of New York, there being a couple of steamers and sailers leaving there for South Africa each month, and so long as present bonding privileges and competitive freight rates to New York continue in force, there is not much to grumble at in that port as an outlet for Canadian general shipments and small shipments of lumber. In fact, before the United States put the new tariff on Canadian lumber, large quantities of Canadian pine were shipped here by American firms by the regular steamers and sailers from New York, which trade should now be continued by Canadians. This channel can therefore be utilized by shippers for the purpose of getting small sample shipments here.

I might say that the principal woods imported into this colony are deals 3" x 9" and 3" x 11", flooring boards, ceiling, clear pine and pine boards, planed on all sides and in the rough, and pitch pine logs.

During the year 1897 there were imported into this colony : Deals, 24,987 standards ; ceiling and flooring boards, 13,755 standards. I have not obtained a return of the imports of pine boards, etc., which would be large, and the returns are not further classified.

Apart from spruce and pine, the major part of these imports is from the Baltic, but recently a new wood to the trade, called "fir," has been introduced here, and several cargoes have been shipped in from Tacoma, Washington Territory, and Vancouver, B.C. The advantage which Baltic timber has had over spruce and red pine is in lengths, as well as being slightly better in quality and more suited for building purposes and joinery work ; but this country demanding long lengths, seems to have given fir a temporary advantage over all, in which deals are now being landed, from 40 to 50 feet long, without a knot.

There seems to be considerable sap in this fir, however, which is also loose in texture, and it is possible that it may not fill the requirements of the market. There is a market here for spruce deals and pine, and the Baltic being closed during winter months, betters the chances so far as the Maritime provinces of the Dominion are concerned, and longer lengths are produced in the provinces than in Quebec. Deals should be 3" x 9", and as long as possible ; other sizes do not sell well, as all building specifications are made out for 3" x 9" sizes. White pine should be shipped say 12" and up x 1", and should be as long as is produced, planed on all sides. It is called "shelving" here. Clear and strictly clear pine boards should be rough, 1½, 2, 2½ and 3" thick, 12" and up wide, and of good length.

I believe the day will soon come when spruce flooring, ceiling and finish will hold a good place with the trade here. As for hemlock, a product of the Maritime provinces, and, I believe, a very good wood, nothing is known of it here, and until a sample lot is received nothing will be heard of it.

I take this opportunity of advising the merchants and mill owners of the Maritime provinces that I have opened here, under sanction of the government of the Dominion, a building wherein exhibits of all kinds may be placed free of charge, and intending exporters are invited to correspond with this office and send samples and form of invoice f.o.b. at port of loading, of goods they are able to supply.

We can without difficulty dispose of car load lots, out of which we can retain samples for exhibition purposes, and we have concluded an arrangement with Mr. J. B. Smull, export agent, 30 State street, New York, to attend to trans-shipments, secure space for shippers, and to advise as to ocean freight rates and sailings. Railway companies will, however, grant through bills to South Africa on car load lots, in which case their own agents attend to trans-shipment.

Thanking you, Mr. Editor, in anticipation of again being allowed space in the columns of your valuable journal, I am,

Yours truly,
THOS. MOFFATT.

## OTHER COUNTRIES

### UNITED STATES.

THE United States market is so well-known to Canadian lumber manufacturers as to require but brief mention here. In the year 1896, with free lumber, our exports of lumber to that country were, approximately, 800,000,000 feet, valued at $9,000,000. There were also exported shingles, lath, scantling, ties, pulpwood, etc., to the value of about $5,000,000. Since the coming into force of the Dingley Bill, in July, 1897, our exports have fallen off considerably. The duty on white pine, spruce and all hardwoods excepting basswood, sycamore and whitewood, is two dollars per thousand feet. These latter are subject to a duty of one dollar.

### FRANCE.

This country is quite an extensive importer of timber products, her chief supply coming from Norway and Sweden. Recently some Canadian lumber has been imported, which seems to have met with favor, and the outlook for an extension of the trade is believed to be promising. The Dominion trade and navigation returns give the export of spruce deals to France in the year 1896 as valued at $110,000, but there is little doubt that this estimate is altogether too low. The average price of 3x9 inch deals at Bordeaux, one of the chief importing points, is 160 francs per standard c. i. f. This is equal to about $32 in Canadian money.

### HOLLAND AND BELGIUM.

These countries also import lumber extensively, the native supply being entirely inadequate. Norway and Sweden furnishes the bulk of the import. Taking the port of Amsterdam alone, we find that in the year 1897 there were received 178 cargoes of wood goods. Zaandam received 142 and Harlingen 72 cargoes. Belgium imported $20,000,000 of lumber in the year 1897. There is a market there for spruce and pine. Indeed, many kinds of lumber would be saleable, providing it is light, properly sawn, squared, and free from rot. The usual dimensions are from 2 to 8 inches in width and from 60 inches upwards in length. The rates of duty assessed on all lumber imported into Belgium are, per cubic meter (35,316 cubic feet), as follows : Oak and walnut wood, and building and cabinet woods other than oak or walnut, in logs or unsawn, and joists and pieces of lumber in the log or unsawn, less than 29 inches in circumference, $0.19$\frac{3}{10}$. Building and cabinet woods (except oak and walnut) : Beams, sawn, $0.38 ; beams, otherwise prepared, $1.16 ; sawn beams, planed, $1.74 ; all other lumber free.

Exporters of lumber desirous of increasing their trade in Belgium must conform to the usage of the country in their methods, especially in the system of measurement. All lumber sold is quoted by the cubic meter ; any other method of giving quotations is unintelligible to Belgian dealers, and all price lists should be made on this basis. Correspondence should be in the French language, and care should be taken to employ the correct technical terms in describing the variety and condition of lumber offered, as confusion is very apt to arise.

### SPAIN.

Concerning the Spanish market Mr. J. Carreras-Ferrer, timber agent, Barcelona, writes as follows : "It is a singular fact that the imports of Canadian produce into Spain should be so limited, and show no signs of improvement. This apathy is due to lack of knowledge on the part of Canadian manufacturers and exporters. I would strongly advise that they appoint capable agents, thoroughly experienced and knowing perfectly the requirements of the different districts of Spain. This country offers a vast field for trade in Canadian wood products, such as pine, hardwoods, wood pulp, etc., and more especially spruce, which is required in large quantities for casing alone, on account of the quantity of fruit produced. The market deserves attention, and Canadian shippers who will take it up in earnest will reap the benefit of their enterprise. Business is of a most sound nature ; no consignments, shippers have no interference with Spanish dues or duties, contracts are made for entire cargoes, both by steam and sailing ships, for determined specifications, at prices in sterling per standard f.o.b. at shipping points, and sometimes c.i.f. Recent sad international

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., OCTOBER 12, 1898 No. 38.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### WANTED.

3" AND 4" HARD MAPLF, 1" SOFT ELM, Black Ash and winter cut Basswood. Box 27, CANADA LUMBERMAN.

### WANTED.

POSITION AS CASHIER AND ACCOUNTANT; over nine years' experience with one of the largest and oldest lumber firms in Ottawa. Best of references. Address, Post Office Box 1066, Ottawa.

### WANTED.

ONE CAR LOAD 1½" ROCK ELM, FIRSTS and seconds, 14, 16 and 18 feet long, and one car load half 1½" and half 2", 10, 12 and 16 feet, to be sawed out and shipped green. JOHN S. MASON & CO., 240 Eleventh Avenue, New York City.

### WANTED—LOCATION FOR SAW MILL.

ADVERTISER SEEKS A LOCATION FOR A saw mill on rail or water—the latter preferred—where from two to five million feet a year of pine, hardwood or cedar could be obtained. Address, "LOCATION," c/o CANADA LUMBERMAN, Toronto.

### TIMBER LANDS FOR SALE.

FRONTING ON RIVER ST. LAWRENCE, south shore, below Quebec. Extent, fifty-four square miles. For particulars apply to

J. P. DUMARESQ,
43 Milton st., Montreal.

### WANTED.

TO CONTRACT WITH SOME GOOD RELIable company to run saw or shingle mill by the thousand. Ten years' experience with band mills (expert band filer by trade); good general mill man from engine to saws; experienced with hard and soft wood sawing; capable and reliable. Highest references on application, from U. S. and Canadian companies. Address "HUSTLER," c/o CANADA LUMBERMAN.

### FOR SALE.

A FIRST CLASS LUMBER AND SHINGLE Mill; average capacity per day, 35 M. feet lumber, 70 M. shingles and 15 M. lath; situated on Hunter's Bay, Lake Vernon, close to station, with six spurs of G. T. Railway running to mill; plenty of Pine Timber. Will be sold cheap. Also a first-class site for a Tannery; plenty of Tan Bark. Apply to THE WHALEY LUMBER CO., Limited, Huntsville, Ont.

### WANTED.

16 INCH XXX AND XX WHITE PINE Shingles; also 18 inch XXXX and 18 inch XX. Address, MIXER & Co., Buffalo, N.Y.

## AUCTION SALE

# Timber Limits

THE UNDERSIGNED WILL OFFER FOR SALE BY PUBLIC AUCTION, at the Russell House in Ottawa, on

**WEDNESDAY, THE 30TH NOVEMBER, 1898,**

at 2.30 p.m., the following timber limits:

### PARCEL NO. 1.

Berths No. 388 and 389, situated on Big Lake, River Dumoine, in the Province of Quebec, containing one hundred square miles. This limit fronts on Big Lake and the River Dumoine for 20 miles and is well watered with improved creeks, making it a cheap country to work. There is a good depot and farm on the limit, and shanty rigging and provisions to the value of about $10,000, which purchaser will be required to take as per inventory, along with the limit.

### PARCEL NO. 2.

Berths No. 343, 344, 205, 233 (or Berth A) and 234 (or Berth B), situated on the River Coulonge, in the Province of Quebec, containing 245 square miles. The Coulonge River runs through these berths. They are well watered with creeks, which are nearly all improved and which render these limits easily worked. There is a good depot and farm on them, and shanty rigging and provisions to the value of about $9,000, which will have to be taken by the purchaser as per inventory.

### PARCEL NO. 3.

Part of Township of Brougham and of Township Bagot, on Madawaski River, in Province of Ontario, containing 37¼ square miles.

### PARCEL NO. 4.

Part of Townships Papineau and Cameron, on Ottawa River at Mattawa, containing 24½ square miles.

All these limits are held by the vendors under renewable licenses or leases from the Commissioner of Crown Lands for the respective provinces, upon terms and conditions mentioned and set forth in the licenses or leases or under the usual provisions set forth in the statutes, orders in council and regulations in that behalf.

The inventories of plant, live stock and supplies will be exhibited at the time of sale or at any time upon application to the vendors, and purchasers shall take such plant, live stock and supplies with respective limits at the inventory's price, subject to deduction of such articles as are consumed, lost or non-deliverable.

The depots, barns, buildings and farms on these limits are upon unsurveyed territory; the titles of which are still vested in the Crown, and the vendors will sell only such right and title thereto as they may possess, and it shall go and belong with the limits on which they are respectively situated.

Each parcel will be offered for sale separately and subject to the terms and conditions of sale, which will be made known at the time of sale.

Dated at Ottawa this 30th day of September, 1898.

W. H. LEWIS, Auctioneer.

WILLIAM MASON & SONS, Vendors.

### SHIPPING MATTERS.

The sch. Fred H. Gibson has been chartered to take lumber from Portland to Paysandu, at $14.50 and return.

The sch. Nimbus has been chartered to load a cargo of lumber at Yarmouth, N. S., for Rosario, at $10.

The saw mill plant of Thompson Smith's Sons at Cheboygan, Mich., one of the largest in that state, was completely destroyed by fire recently, at a loss of $200,000. It is stated that the rebuilding of the mill will depend upon the arrangements that are made for obtaining a log supply from Canada, as at the time of the fire the firm were cutting logs for Alger, Smith & Co., who own limits on the Georgian Bay.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

The volume and class of lumber moving indicates that retail dealers in Ontario are replenishing their stocks; orders have been chiefly for small lots of pine of the lower grades, although hardwoods of all kinds find a ready sale at firm prices. The conditions surrounding the lumbering industry in this province are such as to make it almost impossible to arrive at a conclusion regarding the future of the market. This much may be said, however, that stocks of hardwoods in first hands are reduced to a minimum, while pine manufacturers are holding less than an average quantity. There is also the fact that the home consumption of lumber is steadily growing, and although we may expect a couple of quiet months in midwinter, the outlook for business is considered good. Lumber will no doubt sell with greater freedom next spring, as the position of Canadian manufacturers will be improved. The United States market must be thrown open to Canadian lumber or the log supply to the Michigan mills will cease. Whatever course is followed, the result will be beneficial to Canadian lumbermen.

#### QUEBEC AND NEW BRUNSWICK.

Chartering is now nearly over for the season. There are some vessels under charter to sail from the St. Lawrence during October and November, but the number is not large, and the total shipments of the season will fall short of last year. The statement of timber measured at Quebec shows a marked falling off in the quantity of waney board pine timber as compared with last year, and a slight increase in square white pine. Other varieties have been exported to about the same extent as last year. There is a slight improvement in local trade, particularly in Montreal, where the proposed harbor improvements are about to be commenced.

Throughout New Brunswick and Nova Scotia no signs of a revival of the lumber demand are visible, although a rather unexpected confidence is exhibited by lumbermen. They believe that the bottom has been reached, and that prices cannot possibly further depreciate. Many of the mills have ceased cutting, and will carry over a quantity of logs until next spring. Taken as a whole, the year has been one of the most unsatisfactory on record. No shipments of any account have been made to the United States market, and those to Great Britain have been made on little or no margin of profit. This can best be understood by contrasting conditions. Prices in the British market were this year from one to two dollars lower than those of last year, while the average freight rate was about 47s 6d, against 37s 6d in 1897. Thus the manufacturer did not receive within two or three dollars of as much for his lumber as he should have realized. The South American and West Indian markets have been and are fairly steady, and have this year furnished the only profitable outlets for the lumber of the Maritime provinces.

#### UNITED STATES.

The lumber requirement for building purposes is growing less each day, and consequently the grades of lumber mostly used for this purpose are not moving very freely. The greatest encouragement comes from manufacturing establishments, such as furniture, implement and box making and general wood-working lines. This is preserving the equilibrium of the market. One favorable condition is that stocks in first hands are not large, and before the winter is gone they will be still further reduced, as wholesale dealers have not purchased very heavily and will certainly enter the market for broken lots during the winter months. Taking the principal manufacturing points, we find that shipments in September were larger than in the corresponding month one year ago, while prices are firm at late advanced quotations. A visible improvement in the demand for all kinds of lumber is reported from the chief centres of the United States; Buffalo and Tonawanda are doing a fair trade, and New York and Boston show signs of revival. A Wisconsin dealer gives it as his opinion that next year birch, ash, elm and maple will be back at the old 1892 prices, that basswood will be one dollar higher, and that rock elm will be two dollars higher than at present. We fear, however, that he does not take into consideration any of the influences affecting the market. Should there be a heavy input of logs the coming winter, it is improbable that prices will be any higher, even if they should hold their own.

#### FOREIGN.

Of the British lumber market an encouraging report cannot fairly be given. Consumption continues active, but importers and dealers find that the market is yet too heavily stocked, and that they are entering upon what may be termed the winter trade with stocks very little smaller than last year. Baltic and Canadian shippers alike are pressing their goods, in the hope of closing contracts, and as a result spruce prices at least are showing a tendency to further decline. This year spruce has been sold quite largely on the east coast, and will no doubt continue to be used now that a footing has been secured. There is a fair inquiry for hardwoods.

The extensive shipments to South American countries would seem to indicate a revival of the demand there. Precaution should be observed, however, lest the market should be overdone. Australia is also showing some activity, and gives promise of furnishing an outlet for an increased quantity of lumber.

### BUSINESS NOTES.

McLeod & Spence, lumber dealers and storekeepers, Port Elgin, N. B., are reported to be offering to compromise at 40 cents on the dollar.

The International Box & Heading Works, Buffalo, is, according to report, in the hands of the sheriff, with liabilities of $48,000 and assets of $12,000.

### STOCKS AND PRICES.

The South River Lumber Co. have put in another camp on their Ballantyne limit.

At Tonawanda, N.Y., lumber is said to be moving with more freedom, a number of buyers having picked up stock for the winter trade.

The exports of lumber from Montreal in the month of September last were valued at $1,364,078.

The Dominion government wants tenders by October 22nd for the supply of timber and lumber required for various canals.

Thomas A. Low, of Eganville, Ont., has just purchased 200,000 feet of sawn lumber at Sturgeon Falls from the M. L. Russell Estate.

F. McGibbon & Sons, of Sarnia, Ont., have secured the contract to supply the lumber for the new G. T. R. round house to be built in that city.

M. T. Landriau, of Sussex street, Ottawa, last week dispatched 115 shantymen to the Beaverstone river, in the Georgian Bay district, to work in the woods.

Sanderson's saw mill at Prince Albert, N.W.T., has closed down for the season, and men have been dispatched to the woods. Their season's cut was 2,000,000 feet.

During the nine months ending October 1st, 1898, the shipments of lumber from Minneapolis totalled 262,000,000 feet, against 210,000,000 feet for same period in 1897.

A 4½-mile berth of timber land was sold at Fredericton, N.B., last week to O. F. Stacy & Co., at the upset price. It is situated at heads of Little river and Nine Mile brook.

Alex. Gibson & Son's mill at Blackville, N.B., ceased operations for the season recently, having cut over 10,000,000 feet, or 800 carloads, of deals, which were shipped to Europe.

J. E. Austin & Co., of Standish, Mich., report the sale of 3,500,000 shingles at $2.75 for the best grade and a proportionate price for the lower grades. The supply of shingles is said to be limited.

B. F. Young & Co.'s mill at St. Margaret's Bay, N.S., has been closed down for some time, but we understand that they have enough logs on hand to carry them over a good part of next year.

The Pacific Coast Lumber Co., of New Westminster, B. C., announce that in consequence of the recent fire in that city, they have reduced the price of their grained cedar timber to $23 per thousand feet.

We understand that the cut of lumber at East River, Sheet Harbor, N.S., for this year is about one million feet less than that of last season, and at West River, Sheet Harbor, it is about four millions short.

Owing to the depression in the Eastern States, a considerable quantity of spruce logs will be carried over by Maine manufacturers until next year. About 18,000,000 feet now remain in the boom at Bangor.

It is reported that Eddy Bros. & Co., of Bay City, Mich., have purchased pine timber on four sections of land owned by Jonathan Boyce, in Roscommon. The purchasers will log about 10,000,000 feet the coming winter.

During September J. A. Morrison shipped from his mill at Fredericton, N. B., 12,000,000 cedar shingles, making 40 carloads and nine schooner loads. Sixteen shingle mills are kept constantly in operation, turning out 13,000 shingles a day.

Pine piece stuff, green, is selling on the Chicago market at $10 per thousand, and dry at $10.25. Common inch pine ranges in price from $11 to $12 per thosand, and hemlock inch lumber at $7.50 to $8.50. Cull inch pine sells at $8 to $8.25, and cull piece stuff at $7.25.

H. D. Wiggin, of Boston, Mass., gives it as his opinion that there is no hope for any marked improvement in business during the balance of the year. He believes, however, that there will be increased activity in the spring.

The Grand Trunk Railway authorities have awarded Messrs. McCormick & McLeod, of Bracebridge, a three-years' contract for ties for the Northern division and the main line of the G.T.R. between Toronto and Montreal. About 450,000 ties will have to be supplied yearly.

Tenders are now being asked by the management of the Intercolonial Railway, Moncton, N.B., for extensive harbor improvements at St. John, N. B., including the building of new wharves, freight sheds and elevator. The work will consume a large quantity of lumber and timber.

A mill at Robson, B. C., has secured a contract to supply timber for the new Robson-Penticton branch of the Columbia & Western Railway, amounting to 14,000,000 feet. One bridge over Moberly creek will be 800 feet long and 200 feet high, and will require 750,000 feet of lumber and timber to build it.

A report from Duluth, Minn., states that the outlook for a prosperous logging season in the northern woods of Minnesota was never better. An unusually large cut will be made, although difficulty is experienced in obtaining the necessary men to go to the woods. Wages range from $22 to $36 per month.

The Central Lumber Co., of Saginaw, Mich., have started logging operations on the Blind river, in Ontario. Eddy Bros. & Co., of Bay City, Mich., are also reported to have started logging camps in the Georgian Bay district, believing that the manufacturing clause will not be enforced by the Ontario government.

Exports to the United States from the consular district of Ottawa for the quarter ending September 30th last, included the following: Lumber, $320,695 88; lumber, for export, $37,793.46; match blocks, $18,161.83; bark, $546; shingles, $9,840.97; railroad ties, $4,860.77; timber, $2,309.99; pickets, $6,344.08; poles, $454.48.

At Buffalo and other eastern points there appears to be a fair stock of high grade pine. There was at one time this year a surplus of 12-inch boards, but the supply is now normal. Strips are also rather scarce, but the great shortage is in mill culls and box lumber. The former sell at from $1 to $1.50 per thousand less than box stuff.

In the Blind river district the outlook for lumbering operations is good. Eddy, Jordan & Co. are putting in two camps. The Blind River Co. are going to operate extensively getting out hemlock and pine, and Quinn will operate again in Montgomery township. Besides this, Thompson Bros. have a contract to get out several thousand cords of pulpwood.

A report from Menominee, Mich., states that eastern dealers are looking for good and common lumber. There is also a strong eastern demand for shop and selects and all the higher grades. W. R. Burt, of New York, purchased 1,500,000 feet of board stock at Menominee last week, and McLean Bros., of North Tonawanda, picked up several blocks of lumber.

A Buffalo dealer is reported to have purchased 1,000,000 feet of Michigan hemlock, but before the stock could be delivered the seller cancelled the order, paid $500 to be released, and sold the lumber in Chicago for $1 per thousand more than was to be paid by the Buffalo dealer. This indicates that better prices for Michigan stock can be obtained in the west than in the east.

The docks around the Chaudiere at Ottawa are lined with barges, all being loaded with lumber. The J. R. Booth Company are loading 15 barges, each of which will carry from 250,000 to 300,000 feet. The other exporting lumber firms are also shipping heavily. The lumbermen have during the summer months been short of boats, and consequently could not ship as fast as they otherwise would have done.

The season for towing logs from Canada to Michigan has practically closed. It is estimated that there were rafted to Bay City and Saginaw 151,997,171 feet board measure of Canadian logs, to Alpena 40,000,000 feet, and to Cheboygan 54,000,000 feet. The complete figures for the different ports have not yet been given out. The Spanish River Lumber Co. sent 10,000,000 feet to East Tawas, where they were manufactured by the Tawas Bay Lumber Co.

The Commissioner of Crown Lands for Ontario has granted to the Sturgeon Falls Pulp Co., Limited, of Sturgeon Falls, Ont., the right to cut timber on 75 square miles of spruce lands on the Sturgeon river. The terms of the grant provide that all the spruce cut must be manufactured in Canada. The company agrees to expend $1,000,000 in buildings and plant, and have laid the foundation of the first of six paper mills to be built at Sturgeon Falls. It is stated that the yearly output will be 360,000 tons of pulp, or 120 tons for every working day. Mr. W. J. Finlay, of Lawrence, Mass., has been appointed manager for the company.

Over fifteen years ago an extensive timber belt was secured by Messrs. Shield, Haggart & McLaren, along Shell river, in the north-western part of Manitoba. At that time the property, some 200 square miles, was estimated to contain 350,000,000 feet of timber. In the meantime, nothing has been done towards cutting the timber, and it is estimated that owing to forest fires not more than 50,000,000 feet now remain. A few years ago the limit was sold to Mr. Ferguson, Q.C., of Ottawa, and there is a rumor that Mr. J. B. McArthur will now purchase the property and cut the logs at his mill, which will be removed from Birtle to Brandon. The logs will be floated down the Shell river to the Assiniboine river.

Concerning the Birmingham market, the Timber Trades Journal says: "Considering the very extraordinary rush for building everywhere that has characterized last and the present year, in which Birmingham and the midland district has very largely participated, and also the fact that the early supply of spruce deals was interrupted by the Spanish-American war, it is surprising that high prices have not been asked for spruce during the past quarter. There never has been a scarcity this season; and now that the late shipments are arriving freely, we may see lower figures than now prevail. Unsorted St. John, for the usual cargo specification, say 15 per cent. of 11 in., about 40 per cent. of 7 in., and 45 per cent. of 9 in., can be bought at £7 15s. delivered, whilst West Bay are sold at 5s. cheaper, and fourths at about £6 15s. delivered."

### THE MANUFACTURING CLAUSE.

Some surprise has been expressed by the daily press, and even by lumbermen, that certain Michigan firms were making preparations for again getting out logs in the Georgian Bay district, presumably for export. Information of this having reached the Ontario government, letters of warning were sent out to the Michigan owners of Canadian limits, stating that the clause compelling home manufacture of timber would be adhered to, and that logs cut during the coming winter could not be exported. Reports state that, in the face of this, some operators have gone into the woods, evidently prepared to take their chances.

The Holland & Emery Lumber Company are operating quite extensively, but as they have recently erected large mills at Byng Inlet, this is of no significance. McArthur Bros., of Detroit, had a quantity of logs left over from last season, which they will, of course, be allowed to export. We are informed that this firm also own a timber limit on the Beaverstone river, which is exempt from provincial regulations. The Hardy Lumber Company, of Detroit, likewise have some two million feet which were not exported this year, and will probably be taken away next season. Other firms referred to as likely to operate in Canada this winter are Eddy Bros. & Co., of Bay City, and the Central Lumber Company, of Saginaw.

### SHIPPING MATTERS.

Brigantine Stella has been chartered by Messrs. Andreson, McKenzie & Co., of Montreal, to load a full cargo of lumber for St. Johns, Newfoundland.

The following charters are reported: Bark Hawkesbury, St. John, N.B., to Buenos Ayres, lumber, $8; schooner Syanara, St. John, N.B., to Santos, $13; bark Anilla, Yarmouth, N.S., to La Plata, lumber, $9.25; Caldera, Montreal to Buenos Ayres, $9; Stranger, Weymouth, N.S., to Buenos Ayres, $9.50.

## LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Rail way are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft ,(3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $2.50 per M; under 50 M feet, $3.00 per M; from Arnprior, lots over 50 M feet, $3.00; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 50 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 60 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage. Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 11c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 13 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R., writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M few and over, $2.50; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 50c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $2.75; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3 00; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4 75; lath, 250 M pieces, 60c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.25; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 65c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.: lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 10c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

## CANADIAN EXPORTERS AND WHOLESALERS

THOS. MEANEY & CO.
103 Bay Street - TORONTO
WANT Hard Maple, Mill Run. Any Thickness.

JOHN HARRISON
MANUFACTURER OF
PINE AND HARDWOOD LUMBER

events abated business intensely; but it is gradually recovering. The natural resources of the country are great, and Spanish people, kept to their own boundaries, will soon display their vitality."

### GERMANY.

A limited quantity of pine deals and hardwoods are now exported from Canada to Germany. The requirements of that market, with its extensive manufacturers, are very great, and with vigorous and well directed effort on the part of our exporters a much larger trade could undoubtedly be secured. Nearly all kinds of lumber have been allowed to enter that country free of duty, but a more protective tariff has just been put into force.

## CANADA'S COMMERCIAL AGENTS.

Following is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Austarlasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

## FOREST PROTECTION IN MINNESOTA.

The third annual report of the Chief Fire Warden of Minnesota has been published, from which it appears that, according to the reports of fire wardens, the damage done by forest fires in 1897 was $22,455, and by prairie fires $14,554. Considering that the value of the standing timber in Minnesota is $100,000,000, the reported damage by forest fires is regarded as very small. The report states that the value of the pine, just as it stands, that is cut in Minnesota in a single winter, in a favorable business year, is $5,000,000 when sawed into lumber at the mills, its value will have increased to $10,000,000, of which increase 80 per cent., or $4,000,000, represents labor; when further manufactured and worked up in various forms its value becomes multiplied. This partly illustrates the value of the forests as an industrial resource.

The Chief Fire Warden thinks that as the public comes to understand forestry it will be easier to enforce the law against forest fires. A leading principle of forestry, he says, is that the best agricultural land should not be devoted to forest. One of the great economic advantages of forestry is that wood and timber can be profitably grown on soil that is unfit for farming purposes. Another principle is that the forest must be continuous; that no more timber should be taken out of it in a year, or in a series of ten or twenty years, than grows in the entire forest the same period. Another principle is that the cutting of timber should be in blocks or strips so as to facilitate reproduction on the clear areas by seeds falling from the trees left standing. Another principle is that the forest when young must have in numbers vastly more trees than when it is mature. The tree grown in the open may be handsome and useful for shade, but it is useless for timber. To make good timber the forest, when young, must be crowded so as to secure height growth. Mixed wood managed on forestry principles in the Black Forest of Germany has per acre, at the age of 20 years, 3,960 trees; at the age of 100 years, 262 trees.

The manufacturers of lumber in the Southern States propose holding a conference at an early date to discuss the methods to be adopted for securing the trade in lumber with Cuba and Porto Rico.

## HINTS ON BUILDING BAND MILL TRACKS.

By A. J. Burton, Algonquin Park.

A few suggestions as to the method of building band mill tracks may be appreciated by the practical readers of your journal. One important consideration is that the timber or track ways should be of good sound wood. Southern pine is very well adapted for the purpose, owing to its strength and the fact that it will not warp or twist easily. Plane the track timbers on all four sides as straight as possible, and endeavor to have the timbers of good length to avoid making the joint opposite the saw. Set the timbers 2 inches or 2½ inches into the cross timbers of mill, and bolt down the track timbers, say, every 6 feet. By bolting them it will be much easier to level up the track, for the high places can be drawn down and the lower places can be shimed up, always assuring a good level track. Key the trackways solid by driving hardwood wedges in the gains in the lower cross timbers which the trackways are let into; next, stretch a line parallel with lower band wheel shaft and put down the V or guide track first, which should always be the farthest from the saw, so that it will get less jar from heavy logs and from the nigger than if placed on the saw side, and moreover, you will have less trouble in keeping the track in line. The line should be two inches higher than the top of track iron.

After laying down both tracks temporarily, make a wood straight-edge long enough to reach from one track to the other, and cut a notch in it to fit the guide track exactly, and fair over the centre of guide rail drive in a nail to be used for a guide as a pointer to set the guide rail true to the line by. You can move this straight edge along every foot or so, and with care can set a guide track perfectly true.

It is taken for granted that the track is straight and level, that the edges of the band mill wheels are turned true, and that the lower wheel shaft is perfectly level. Draw a line parallel with the track from one end to the other; then draw a line across the track above the floor in front of band wheels and square this with the first line; then, from sticks or supports above the upper wheel, let fall two plumb lines at opposite edges of front side of upper wheel, and let these lines fall directly to or at equal distances from the line already stretched across the track. Then, by moving one or both ends of the lower wheel shaft, square the wheel shaft with the line across the track by having the opposite edges of the band wheel at exactly the same distances from the two plumb lines, and adjust top wheel in similar manner. It is better to have a band saw trained a little in rather than out of the log, but it is best to have it perfectly parallel with the track. Having the wheels properly lined, do not move the cross line again, not even to adjust the saw, but put saw on mill, run it slowly, and adjust saw with the tilt until the saw runs from ¾ to ⅞ of an inch off the front edges of wheels. If your saws are hammered alike you will not have to move the tilt again for the season's sawing, unless the saw gets hot or meets with an accident, for saws will all run alike if put up alike. Adjust guides carefully and slack off all four guides from saw. Next, set the lower log side guide up to saw, put in a sheet of writing paper between guide and saw, and then screw up the guide until paper will not fall out, but not so hard as to move the saw out of line. Then fasten the guide firmly, put in another piece of paper between the saw and the board side guide, and push the guide up and fasten firmly, and if right the paper will pull out tight and leave a perfectly guided saw without too much or too little clearance. Set the top guides same way, but always be careful not to move saw out of line when setting the guides.

If a band saw is hammered and fitted right, and the mill and guides are properly lined, the saw will stand a good feed and cut straight lumber.

## SPACING AND LENGTH OF BAND SAW TEETH.

The spacing of band saw teeth as used on bands and band resaws varies from 1 to 2 inches, but the great majority run a spacing of about 1½ to 1¾ inches. There is nothing to recommend a longer spacing than the above, unless it is desired to run a long tooth with extreme hook. In such case a 2-inch spacing may be used with a throat from ¾ to 1 inch deep on a log band saw and from ⅜ to 9/16 on a band resaw, with a large rounded gullet quite similar to that run on a circular saw. Shorter teeth are usually preferred for hardwoods and frozen timber than are used for softwoods or summer sawing. Thus a ½ inch tooth is generally used for hardwoods in winter and 9/16 in summer, while teeth for soft woods range from ½ inch to ¾ inch, or longer.

A style of throat that is very popular in many sections, and especially among the cypress manufacturers, is the rather long throat with the base line about horizontal. It is impossible to suggest that any particular style of tooth is best adapted to any particular wood, for the reason that all shapes of teeth are apparently used with success in different woods. Expert users of band resaws find that for boxboard work not over 12 inches wide, a spacing of 1⅝ is satisfactory. In work demanding a minimum saw kerf and a moderate speed for saw, as in sawing picture backing, etc., a 2 inch spacing is found good. The same is true of resawing panel stock and hardwoods. Kiln dried hardwood, such as oak, hard maple, etc., tends to dull the saw very rapidly unless the feed is well regulated, and it is well to have the saw stand a fair feed instead of simply allowing it to rub the dust away. Careful feeding of the saw in kiln dried hardwoods will enable the saw to do good work in cutting considerable stock, where feeding without exercise of careful judgment may dull the saw in a few minutes.—From Baldwin, Tuthill & Bolton's Manual.

## GREAT FORESTS IN INDIA.

Few people have any idea of the immense forest area in British India—a valuable asset which is now being systematically preserved. At the present time the reserves of the forest cover an area of nearly 75,000 square miles, and they may be hereafter further extended in Madras and Burma, where the work of reservation is as yet incomplete. Outside these reserves are about 56,000 square miles of state forests, some of which will eventually be brought within the reserve area. This means that there are in India practically for all time forests which would completely cover the United Kingdom. The mountain slopes of the Western Ghauts are still covered with the vegetation of the primeval forests.

# WOOD PULP DEPARTMENT

## THE PAPER AND PULP INDUSTRY.

THE past two years have witnessed a marked development in the paper and pulp industry of Canada, and yet, considering our vast resources and the excellent facilities at our doors for manufacturing, it is rather surprising that we have not taken advantage of them to a greater extent. It would seem that only recently have Canadians realized the value of such immense spruce forests as are to be found in this country, but now that a commencement has been made in the right direction, we look forward to the establishment of an industry of almost inestimable value to the people.

We have in the past been too content to allow our raw material to be taken to the United States, there to be manufactured into pulp and paper for supplying the British market. It is estimated that in the United States there are 1,200 pulp mills, turning out more than 1,500,000 tons of pulp per year, in the manufacture of which about 2,000,000 cords of wood are consumed. Much of this wood is supplied by Canada. In the year 1892 the United States imported $183,312 worth of pulp wood, while last year the import was valued at $711,152. The significance of these figures is that the United States is becoming more and more dependent upon Canada for a supply of pulp wood, and unless some protective action is taken by the Dominion government, an increasing quantity will be taken away each year. According to the present tariff arrangements, pulp wood is subject to no duty whatever, but the United States government collects a duty of 10 per cent. on imported manufactured pulp and 15 per cent. on paper. The position is therefore unfavorable to the building up of the pulp and paper industry in Canada so far as the United States market is concerned. Whether any change will be made as a result of the conference of government representatives now in session at Quebec is an open question.

In European countries, however, there is a market for paper and pulp which is not subject to such discrimination. We now supply Great Britain paper makers with a limited quantity of pulp, which is regarded as of superior quality to that obtained from Norway and Sweden, but the quantity bears little relation to the facilities which we possess for the manufacture of the material.

## THE CHICOUTIMI PULP COMPANY.

ONE of the most extensive establishments of its kind in Canada is that of the Chicoutimi Pulp Company, at Chicoutimi, in the province of Quebec. The works are situated on the Chicoutimi river, about one-quarter of a mile from its discharge into the Saguenay river, which is navigable up to Chicoutimi. The mill is on an island, the river flowing in rapids on both sides. The Chicoutimi river flows from Lake Kenogami, where the company have about 700 square miles of timber limits, in which black and white spruce are plentiful. The Quebec and Lake St. John Railway Company have a siding right up to the door of the mill. There are several large falls of water both above and below the mill, where a large amount of power might be readily developed.

VIEW OF THE CHICOUTIMI PULP COMPANY'S MILLS AT CHICOUTIMI, QUEBEC.

The town of Chicoutimi numbers about 7,000 people, and is quickly growing, over 100 houses having been built this year. The town is lighted by electricity generated at the pulp mill, and has also a good system of water works. It is a very pleasant place to live in, owing to the superb atmosphere which permeates the district and the many pleasant excursions which can be made to the numerous lakes and mountains where fish and game are abundant.

The pulp works occupy a space covering several acres. One block of buildings comprises grinding rooms, measuring 60 × 80 ft., wet machine rooms, 130 × 50 ft. (of which a view is given), pump room, 30 × 50 ft., bailing room, 30 × 40 ft., electric light room, 30 × 40 ft., all on the island as aforesaid. On the main land is a large wood preparing room, 50 × 80 ft. On a convenient spot are also the blacksmith shop and machine shop, the largest in that section of the country. Other buildings comprise the boiler house used for heating purposes and a large storehouse. The offices occupy a commanding view of the whole works and are light and commodious.

The falls and rapids from which the mill derives its power are 170 feet high, and are capable of developing 15,000 horse power, although at the present time the company use only about 4,000 h.p. The water is conducted to the water wheels by a steel flume 11½ ft. in diameter, having 55 ft. head and 20 ft. draft tubes. The turbines are of the Crocker pattern. There are two 40 inch, one 25 inch, and one 20 inch, all in the same penstock. The wood preparing mill is driven from a wheel in this penstock, and the power is transmitted across the river by a shaft running over a steel bridge.

A series of chains carry the wood from either the cars or the river reservoir to the saws, and from thence to the barkers, whence they proceed across the river to the grinder room without being handled by men. Six grinders of the newest type grind there an average of 50 cords per day, and a sufficient number of screens doubly screen all the pulp produced. In the wet machine room are eight heavy wet presses capable of making from 80 to 90 tons of pulp daily, and powerful hydraulic presses for the purpose of extracting the water and bailing. The pulp is all put up in press-packed bales and sent to Europe. Shipments are made from the Chicoutimi port and also from the port of Quebec.

VIEW OF PORTION OF WET MACHINE ROOM, CHICOUTIMI PULP COMPANY.

The company employ on an average 125 men. In winter 200 extra men are given employment cutting the wood in the forest and drawing it to the edge of the different rivers, which are very

numerous in the district. About 400,000 logs are thus cut down and floated on Lake Kenogami and the Chicoutimi and Saugenay rivers to the mill. The yearly consumption of black and white spruce is about 15,000 cords, producing approximately 24,000 tons of wet pulp. It is the intention of the company to increase its plant in the near future.

The president of the company is Mr. J. D. Guay, of Chicoutimi, who is also the proprietor of the paper "Le Progres du Saguenay." The managing director is Mr. J. E. A. Dubuc, a man of great financial capabilities, who has promoted the interests of the company with a very remarkable success. The superintendent, Mr. Oswald A. Porritt, a practical man of much ability in chemical as well as in mechanical pulp, has under his supervision the whole plant, the produce of which is readily disposed of in the European market. Much of the machinery in the mill was supplied by the Waterous Company, of Brantford.

There are almost 2,000,000 acres of timber on the island of Anticosti, and M. Menier, the owner, will probably establish two pulp factories.

It is expected that the pulp mill at Sturgeon Falls, Ont., which was recently taken over by an English syndicate, will be put in operation during the present month.

## THE LUMBER TRADE IN MONTREAL.

MONTREAL, Sept. 6th, 1898.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—The lumber trade in this city is not much improved in a local way from the recent years of depression. Building contracts are comparatively scarce and prices low; consequently, a certain number of builders have gone into the speculative building trade. Hundreds upon hundreds of houses have been erected in the suburbs in desirable localities made accessible by the electric railway extensions, but it has been overdone, and great numbers are idle for want of tenants or purchasers.

The usual method with many who have little to lose and much to gain is to secure a desirable site, pay cash for the land, and borrow and get credit for the building. This worked all right as long as there was a demand for houses, but as purchasers and tenants are not keeping pace with the number of houses, flats and tenements built, the game plays out, and when the houses will neither rent nor sell, or the builders cannot borrow any more money on them, the venture collapses, and the poor lumbermen, millmen and others get left out in the cold. I will give you one instance: A builder who has been erecting scores of houses and tenements, got behind from being unable to sell or negotiate further loans. He owed a lumberman five thousand dollars for material, for which he gave notes. When the notes came due there were no funds; they were renewed as they came due, and nine per cent. interest charged. The lumberman got worried over it and pressed hard for a payment; the builder made a strenuous effort and handed in ten dollars on account. Very shortly afterwards the estate was thrown into bankruptcy, and the lumberman realized sixty dollars out of the five thousand.

There are scores of cases of this kind, which show the unhealthy state of the retail lumber and building trade in this vicinity. Parties who have been catering to this class of trade are beginning to feel the effects of it severely. Credit and bad debts are the curse of the building and lumber yard trade. Irresponsible parties get too much credit and recklessly underbid and undersell responsible parties with capital. Credit is far too easily obtained, as everybody is anxious to sell.

Yours respectively,

"RETAILER."

## THE BRITISH PULP MARKET.

THE following communications from pulp importers in Great Britain, referring to the possibilities of that market, will doubtless be of interest to Canadian pulp mill owners:

GLASGOW, SCOTLAND, 1st September, 1898.

DEAR SIR: Canadian pulps are making their way gradually into favor among British consumers. Mechanical has the advantage in quality over much of the Scandinavian pulp that is imported, and is better liked, but it has this disadvantage, that it is put up in loose bundles and is difficult to handle without loss, whereas all Scandinavian pulp is baled in canvas. Sales might be increased if Canadian mills adopted this style of baling. Sulphite is taking a better place in the market than it did. Buyers like the spruce fibre, but complain of irregularity and want of strength. There is a great future for this article, but whether it commands a high or low price will depend on quality and cleanness. In the latter respect it is wanting. If makers would give more care to have the pulp properly screened, and make it slightly stronger, there would be a greatly increased volume of business done and higher prices obtained.

The new mills in process of erection and contemplated will throw a much larger quantity of pulp on the market, and as great activity is also shown among Scandinavian mills to increase their output, prices will naturally be lower, and rule lower for all sorts until the trade can absorb the increase. Makers who are alive to this have in many instances already discounted the fall and accepted lower prices for next year. We consider the haste to do so premature, seeing that the output from new mills cannot come on the market "all of a heap," but will come gradually and at considerable intervals of time. The fact that some well known brands of Norwegian sulphite have been sold for all next year much lower than last year's contracts were booked at, has compelled other not so well known brands (as well as Canadian) to follow suit.

Yours truly,

THOS. KENNEDY & SON.

LONDON, ENG., Sept. 8th, 1898.

DEAR SIR: At the present time prices of pulp are somewhat uncertain. The Scandinavian makers are not very well satisfied with the prices they are now getting, and it seems probable that lower prices will have to be accepted for next year's contracts. Most of our large paper mills contract for a 12 month's supply in advance. Still for all that, we anticipate much larger trade for Canadian pulp, provided freights keep reasonably low, and we anticipate that steamer freights will be much lower from Canada during the next twelve months. The unsettled state of the freight market, owing to the Spanish-American war, is now over, and owners will be obliged to accept cheaper rates. During the past week there has been a good demand for Canadian pulp, and we hear of several good contracts for next year's delivery.

We can place from eight to ten thousand fathoms of spruce and poplar pulpwood, lengths 4, 6, 8 and 10 feet, and should be glad if you could give us the names of such firms (not already represented here in England) who could supply us with this quantity.

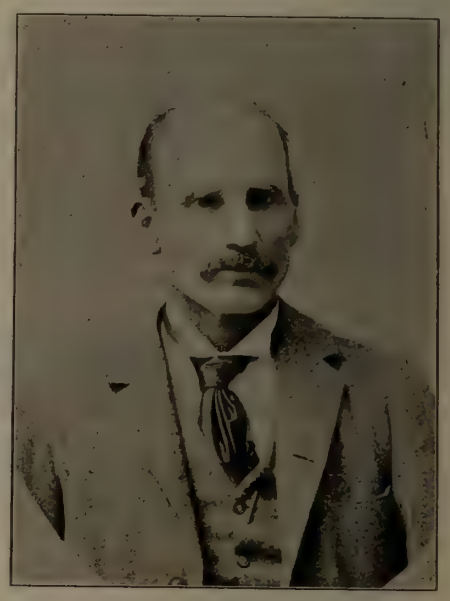
Yours faithfully,

ABBOTT & CO., LTD.

## THE LATE THOMAS HALE.

ANOTHER prominent lumberman of Ontario has joined the ranks of the great majority, in the person of Mr. Thomas Hale, who died at his home in Pembroke on Thursday, September 15th. For some time Mr. Hale had been afflicted with a nervous disorder, but was on the road to recovery, when, one month previous to his death, he was attacked by typhoid fever, with fatal results.

Deceased was born in the year 1841 on the old homestead on Hale's Creek, about four miles west of the town of Pembroke. His father, who was one of the pioneer settlers, was an Englishman, and his mother of Scotch descent. Lumbering attracted Mr. Hale when he was a mere youth, the free life of the woods appealing irresistibly to him, and he has been a lumberman ever since. When about fifteen years old he went to the shanties, and was soon promoted to the position of foreman and pilot for Mr. J. L. McDougall. After serving some years in that capacity he branched out as a lumber jobber, and was quite successful, no doubt owing to his thorough practical knowledge of the business. He afterwards formed a partnership with Mr. Robert Booth, of Pembroke, which continued for some time, when he became associated with Mr. J. R. Booth, the lumber king of the Ottawa valley, the firm name being Hale & Booth. This firm, twelve years ago, bought some timber limits, and from a very small beginning built up a large business. Mr. Hale's first acquaintance with Mr. Booth was in 1878, when he took out a large quantity of logs for his Ottawa mill by contract. It is said that he was the first Canadian to float a raft of timber out of Michigan for the Quebec markets. The Michigan raft was taken from the Two Heart and Sucker Rivers in Northern Michigan, where the firm owned extensive limits, which they have been working recently. In the last few years they have sold many logs to Michigan manufacturers. The firm's limits in Canada are on the Montreal, the Magnetawan, Vermilion,



THE LATE THOMAS HALE.

White Fish and Serpent rivers, and in the Kippewa.

Within a few years Mr. Hale was a comparatively poor man, but with qualities for the work he had chosen which ensured success, his opportunities came, and he took advantage of them so effectually that at the time of his death he had accumulated considerable wealth, being the owner of much property in Pembroke. He was a busy man, always actively engaged in looking after the interests of his firm. Indeed, it is feared that his close attention to business hastened his end. In religion Mr. Hale was a Presbyterian and in politics a staunch Liberal, being one of the prominent workers for that party in the North Riding. Mr. Hale is survived by his wife, two daughters and three sons.

**BARBER'S CANADIAN TURBINE**

**As a Saw-Mill Wheel,** is by far the Steadiest Driver, varies less from light to full load and pulls steadily through the heaviest cut.

## THE LANE SHINGLE MACHINE.

An illustration is given herewith of the Lane shingle machine, as manufactured by the Lloyd Manufacturing and Foundry Company, of Kentville, Nova Scotia. This machine is used very extensively in the United States and Canada, over one thousand having been sold in the former country, where the patentees, the Lane Manufacturing Company, have been awarded numerous gold medals and diplomas. Regarding the construction and operation of the machine, the manufacturers state that the saw arbor is of best steel and 2⅜ inches in diameter, with bearings 10 inches long, lined with best babbit metal; size of driving pulley, 13 inches in diameter and 10 in. face. The brackets that hold bearings are adjustable by screws, so that at any time they can be adjusted to line saw with carriage.

The block carriage is mounted on wheels, two large V wheels on back running on V track, which are provided with means of taking up all lost motion in case of wear, and on the front carriage runs on flat rollers of large diameter, being secured to framework of machine; the rail or way being attached to front of carriage. By this means the sawdust is prevented from sticking, as is the case when the wheels are attached to carriage on front and running on track. By an attachment to handle that starts and stops carriage is a pall, so arranged that when handle is turned to stop carriage, this pall engages in a toothed rack fasted to bottom of carriageway, and securely locks carriage, which overcomes the dangerous objection in many other machines when carriage starts as operator is putting in block, and often causes the loss of an arm.

The top casting that holds block is arranged with two powerful springs with means for making the tension greater or less by a thumb nut. The top of shingle carriage is raised to receive block by a foot treadle which is not shown in cut, but urnished with each machine. The feed has cones of two steps for varying the feed to suit the class of timber to be sawn. Attached to the cone shaft is a leather board friction, which is engaged or disengaged to friction pulley thirty-four inches in diameter, by simple movement of handle shown at side of machine. The large friction pulley revolves on a sleeve bolted solid to framework of machine, with sleeve extending about 2½ inches through hub of pulley. Attached to the end of this sleeve is a casting with a lug pin three inches in diameter, which is offset from centre of sleeve 8 inches, swinging or revolving on this eccentric. On offset lug is a slotted lever or crank, having slot 3 inches wide and 18 inches long. Fastened to spoke or friction pulley is a pin with a 3 inch roller which fits in the slot of lever or crank; thus when you revolve friction pulley, and 3 inch roller is opposite full turn of lever, it will be at farthest end of slot in lever or crank, and when friction pulley is turned a half turn from this point, 3 inch roller attached to spoke of friction pulley will be three and one half inches from centre of fulcrum; thus to each revolution of friction pulley, it gives one slow and one quick motion return of carriage, four to one, this being done without the aid of any weighted movement.

The jointer is built attached to frame of machine as in engraving, or furnished separately when so ordered. The shingle rest or table is arranged with a swinging piece next to saw, which provides for shims or pieces getting between it and saw by it giving away and letting pieces through, then springing back; in machines where this is not provided for, many expensive accidents have occurred, and saws ruined by pieces getting in and crowding saw over against carriage.

The Lloyd Manufacturing Company will gladly furnish additional particulars of this machine to interested persons.

## PULP NOTES.

Mr. Ali, a lumberman of Thirty-One-Mile Lake, Que., states that it is the intention of two American capitalists to build a pulp mill on that lake next spring.

The Electric Light and Power Company of Quebec are building a large power house at St. Gabriel Falls, Que., where it is proposed to establish three pulp mills.

It is said that H R. McLellan, of St. John, N.B., has in view the erection o pulp mill on his timber property at St. Margaret's, on the north shore of the St. Lawrence river.

It is rumored that he International Paper Trust has purchased the Guise wate power on the St. Maurice river, in the province of Quebec, and will erect a large pulp mill there.

Mr. E. V. Douglas, o Philadelphia, who is interested in the Kakabeka Falls, on the Kaministiquia river, near Port Arthur, Ont., is understood to be negotiating for the building of a pulp mill in the vicinity.

A wind storm recently demolished some of the walls of the new pulp mill now in course of construction at Hawkesbury, Ont., for the Riordan Pulp Company, as a result of which the mill will not be completed as early as was expected.

Mr. Harry B. Wood, of Argyle Building, 45 Hanging-Ditch, Manchester, England, has been appointed agent for the Laurentide Pulp Co., of Grand Mere, Que., and will handle their production of sulphite and mechanical pulp in the British market.

The Maritime Sulphite Fibre Co., of Chatham, N. B., have ordered a 500 h.p. cross compound condensing engine from the Robb Engineering Co., to replace their present 250 h.p. engine and to provide for contemplated enlargements of their plant.

The new mills of the Laurentide Pulp Co. at Grand Mere, Que., are now almost completed. The plant has cost about $1,500,000, and is modern in every respect. The daily production of sulphite pulp will be 75 tons, and of ground wood 100 tons.

Mr. W. G. Reid, of Montreal, who was given an extensive franchise by the Newfoundland government, is said to be considering the erection of a pulp mill at Grand Lake, with a capacity of 162 tons of dry pulp per day. For this purpose a company is being formed.

Mr. A. Drewson and his brother, Dr. Drewson, of New York, have just made an extensive tour of the pulp wood districts of the Petawawa river, with the intention of establishing large pulp mills in the vicinity of Pembroke, Ont. They hope soon to secure the necessary capital to carry out the proposed enterprise.

At a recent meeting of the Cushing Sulphite Fibre Co., of St. John, N.B., it was stated that Captain Partington, of the firm of Olive & Partington, Manchester, England, had agreed to furnish two-thirds of the capital for a 50 ton mill. An effort is now being made to secure local capitalists to subscribe the balance of the money.

Dr. Vigo Drewson, of New York, vice-president of the Petawawa Lumber, Pulp & Paper Company, was in Toronto last month. This company holds liberal concessions from the Ontario government setting aside extensive tracts of spruce lands in northern Ontario for the purpose of permanently supplying raw material for the manufacture of wood pulp in the large mills which this company will build at Petawawa, Ont., where it has secured about five hundred acres of land and all water power rights on the Petawawa river, in the vicinity of the Canadian Pacific Railway station. The company expects to have in operation before the end of next season a plant with a daily capacity of 50 tons of dry sulphite fibre. The company will probably build a paper mill also, of about 100 tons daily capacity.

A meeting of Canadian pulp and paper manufacturers was held in Montreal on September 14th, at which the following firms were represented: E. B. Eddy, of the E. B. Eddy Company, Hull; John McFarlane, of the Canada Paper Company; J. F. Patton, of the Dominion Fibre Company; J. Davy, of Merritton; F. H. Clergue, of the Sault Ste. Marie Pulp & Paper Company; W. G. Jones, of the Acadia Pulp & Paper Mills, Halifax, N. S.; Hamilton & Ayers, Lachute; F. G. Soucy, of Old Lake Road, Temiscouata; Jno. R. Barber, of Georgetown, Ont.; St. Raymond Pulp Company; Fraserville Company. After a lengthy discussion, the following resolution was adopted: "It is the sense of this meeting that an export duty be immediately placed on all pulp wood exported from Canada (no matter in what shape or size), which would be equivalent to the present import duty on Canadian pulp entering the United States, unless the United States admit all Canadian pulp, both chemical and mechanical, free of all import duty."

---

The exhibit of Campbell Bros. at the St. John Exhibition consisted of carriage and car springs, axles, chopping, ship bench, boy's, hunter's, fireman's and ice axes, also hatchets, chisels, slicers and adzes. Their exhibit was somewhat different from that of last year, inasmuch as they took goods from stock and showed exactly what they sold to their customers. They claim to have booked some good orders. Their brand of hand made black axe seems to be the favorite with lumbermen.

Correspondence solicited with Wood Exporters, especially Spruce; also with Wood-Pulp Manufacturers. Spain is becoming an important market, worth attention, for Canadian produce. Can establish regular trade from the leading importing firms throughout the Peninsula. First class references.

## Lumberman's Vest-Pocket Inspection Book

Compiled by the Editor of the CANADA LUMBERMAN.

Containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States, embracing also many useful tables and calculations of every-day service to lumbermen.

Every care has been exercised to insure the accuracy of the information published in this Inspection Book. The memorandom book feature has been adopted with the object of making the book additionally convenient and valuable.

**The Lumberman's Vest-Pocket Inspection Book**

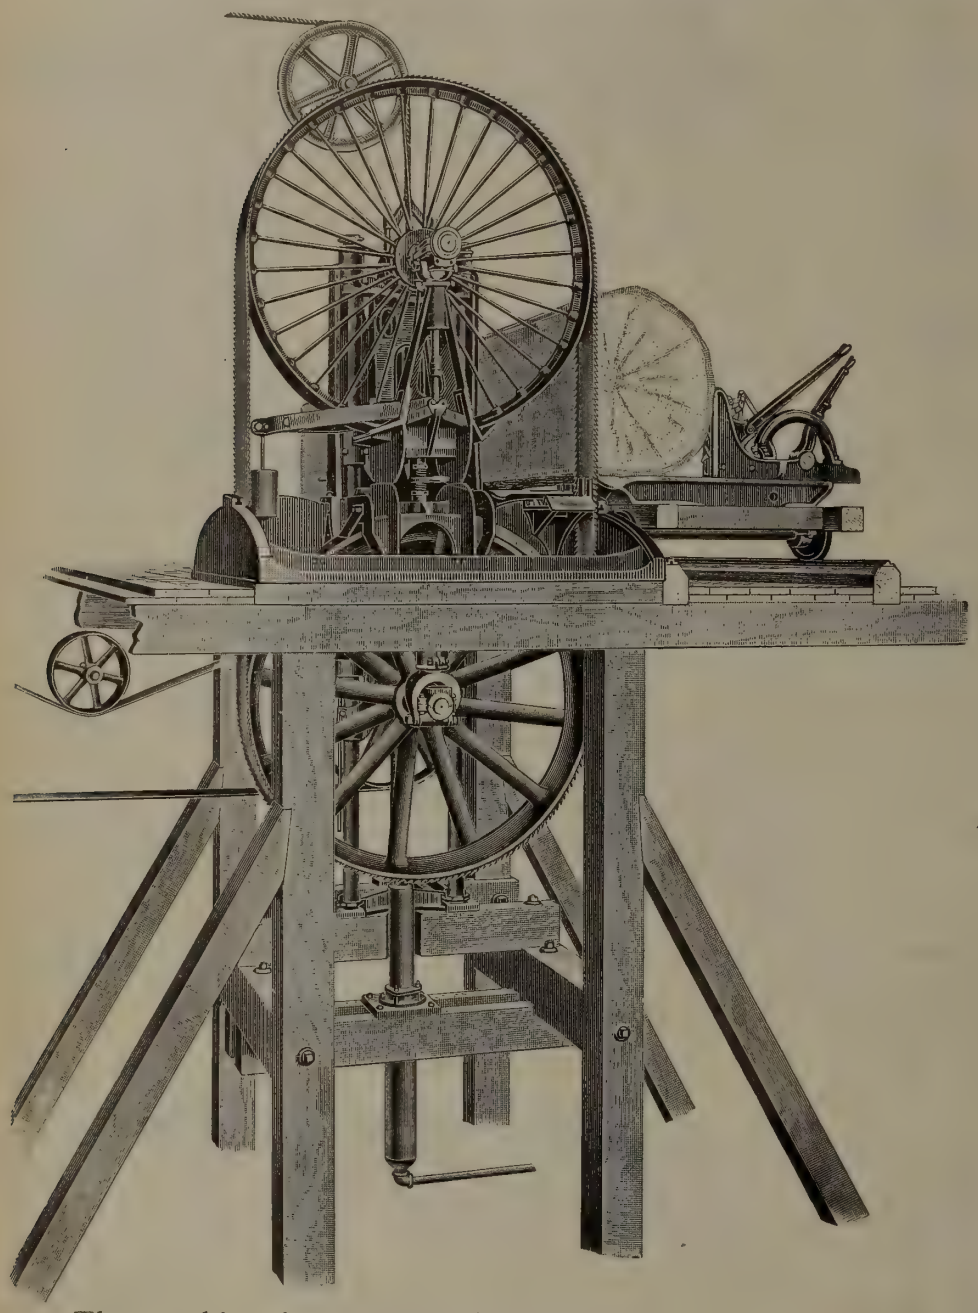
will be sent, postage paid, to any address in Canada on receipt of four three-cent stamps, or to any part of the United States on receipt of twelve cents.

ADDRESS :

The Canada Lumberman
TORONTO, CANADA.

# New Allis Telescopic Band Mill

## For Either Single or Double Toothed Saws



## WHAT DOES IT MEAN?

It means a Band Mill that is built on correct mechanical principles.

This entire mill is moved vertically, so that the centre of the upper band wheel can be brought down close to the top of the smallest log, thereby having a saw shorter than a gang saw above the work on any sized log.

The vertical movement enables us to keep the surplus length of saw blade below intsead of above the log. The upper wheel acting as the guide, insures the greatest possible rigidity of the saw, enabling the same to stand more feed than on the ordinary band mill.

This cut shows the Mill elevated to cut a large log.

Manufactured in Canada only by . . . . .

**THE WATEROUS ENGINE WORKS CO.**

**BRANTFORD, CANADA**

The machine is now, and has been for over seventy-five days, running twenty-two hours per day, fitted with double-toothed band saws, in the H. C. Akeley Lumber Co.'s mill at Minneapolis, Minn.

A visit to the above mill will convince anyone that this mill is cutting lumber at least 50 per cent. faster than it can be manufactured on any other make of band mill.

This mill is moved up and down at any desired speed while sawing by hydraulic power. The machine is very simple in construction, consisting of a regular band mill (less the upper guide and driving mechanism for same) mounted on slides with hydraulic cylinder for raising.

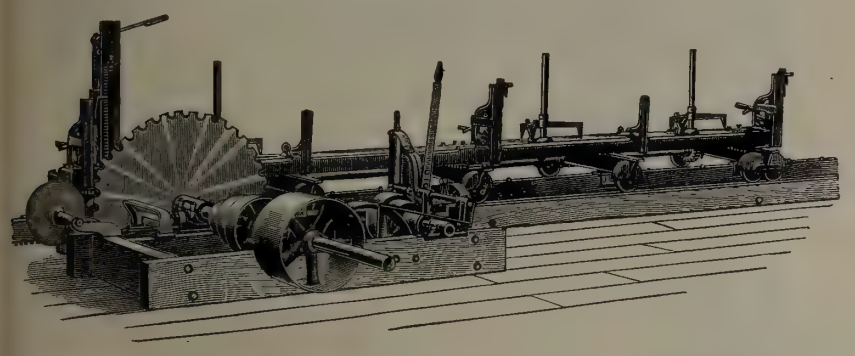
This cut shows Mill in lowest position to cut cants 12″ thick.

**We will be pleased to mail you our Circular, giving full information.**

**Waterous, Brantford, Canada**

# ROTARY SAW MILLS

We build three types of Rotary Carriages—the "Skeleton," as shown in cut; the "Lane," which has a wood frame mounted on trucks; and the "Angle," which is adapted to sawing heavy timber, as it will cut perfectly parallel.



We aiso supply Engines and Boilers for all purposes, Pulp Mill Machinery, Shingle Machines, Lath Machines, Planers, Edgers, Saws, Belting, and other Mill Supplies.

## Argument vs. Fact

All the argument in the world in favor of the old fashioned, out-of-date, wooden dry-kiln truck, will not avail against the simple statement of fact that a steel truck is not only infinitely **better** in every way, but much cheaper, too, in the end. A man's common sense teaches him that. But there's a difference even in steel trucks. **WE CLAIM,** and hundreds of dry kiln users bear out the statement, that

## The Standard Channel Steel Roller Bearing Truck

is the best truck yet devised. Two men can handle the biggest load on it; it cannot break down; heat and dampness of the dry room does not affect it; it will last a lifetime; it never needs repairs; the amount saved in material and repairs alone in one year will more than pay for the entire cost. This is the actual experience of users. No theory about it.

We make 'em for crosswise and endwise piling and for flat and edge stacking.

We furnish them with **THE STANDARD IMPROVED COMPRESSION DRY KILN,** or sell them separately to users of other kilns.

Ask for our New Truck Booklet. It illustrates and describes our different types of steel trucks, and also our steel transfer cars. It contains, too, testimonials from many people who have thrown away their wooden truck and adopted our new steel truck.

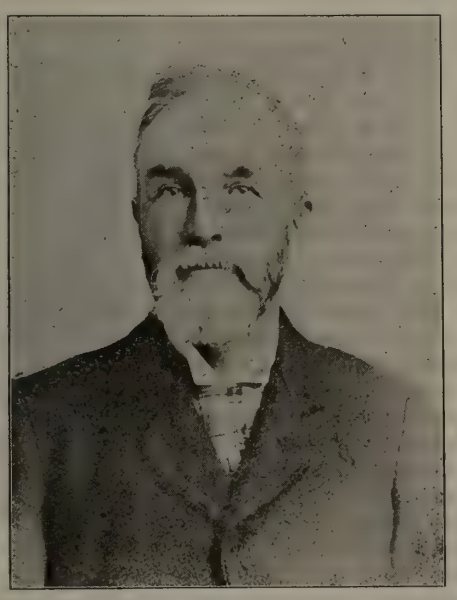
## NOVA SCOTIA LUMBERING FIRM.

PROMINENT among the exporters of lumber in the province of Nova Scotia is The S. P. Benjamin Company, Limited, of Wolfville. This firm have a band saw mill at Falmouth, on the Avon river, about ten miles above the town of Windsor. It was built in 1896 on a large limit which the firm purchased tributary to the Avon river, and has a capacity of about five million feet per year. The firm pay particular attention to the South American and West Indian trade. The lumber from the mill is transported in a water sluice several miles to tide water, where it can be put on scows and taken to Hantsport for shipment. The mill is steam power, and was built completely by the Waterous Engine Works Co., of Brantford, Ont.

Messrs. Benjamin also have a water power gang and rotary mill at White Rock, a few miles from Wolfville, where until lately they carried on a lumber business of from four to five million feet per year. In both mills the company's present operations amount to about eight million feet annually All their lumber for export passes through the Basin of Minas into the Bay of Fundy. Mr. S. P. Benjamin, the president of the company, whose portrait we print, is a veteran lumberman, and perhaps no man in the business understands the conditions prevailing in the South American trade better than he. Illustrations of the two mills of the firm appear on this page.



MR. S. P. BENJAMIN.

SAW MILLS OF THE S. P. BENJAMIN COMPANY, LIMITED, OF WOLFVILLE, N. S.

## THE SMALL MILL IN HARDWOODS.

IT is to some extent a disputed point whether hardwood lumber can be most satisfactorily made with a large or small plant. It is contended by some that to make good lumber you must have the best of modern tools—band saws, edgers, trimmers, and all the auxiliaries of a modern and first-class mill. Given an adequate supply of timber to keep such an outfit in operation long enough to enable it to pay for itself, and this position is likely to prove correct, but that it will apply to any great extent to hardwoods is open to question. It is exceptional that locations can be found for hardwood mills that are within easy reach of sufficient timber to justify the building of a first rate mill. Here and there it may be possible to find them, but, generally speaking, such locations are already occupied, and the possibility of finding other similar ones is very remote.

In point of fact, the bulk of the hardwood product has already come from the small mills, and there seems to be no reason now to doubt that it will continue to do so. The main reason of this is that the growth of hardwood is everywhere so scattered that it is difficult to bring it to the mill—so exceedingly difficult, indeed, that in most cases it is found cheaper to move the mill to the timber, and, as the near-by supply is cut out, to move it again within reach of the fresh stock. This is practicable, of course, only within the small mill; hence the small mill is, and must continue to be, the chief reliance of the average producer of hardwoods.

It is even likely that this tendency may make it hard for the larger mills now depending for a log supply upon the streams whereon they are located, to maintain their position as leading producers. The timber near to the streams is getting pretty well cut off, and as the loggers have to go each year farther and farther back to find trees suitable for their purpose, their hauling expense increases until it is even now becoming so heavy as to absorb all the profit there is in the operations. The obvious remedy for this is to move small, comparatively cheap mill plants into the woods, and manufacture the lumber there. Then only the marketable product needs to be hauled out, the mill culls, slabs and other waste remaining where it is made. It costs no more to haul lumber than logs, while the saving in avoiding the needless transportation of a vast bulk of useless material that must in the end be thrown away, amounts in itself to no mean profit.

Formerly the great objection to this method of operation lay in the difficulty of getting lumber decently manufactured with small circular mills, but that is fast disappearing, and complaints of bad sawing are not heard now to nearly the extent they were a few years ago. It is easier now to get good saw mills that will saw as evenly as any, and the business is getting to a greater extent into the hands of men who know that lumber must be well manufactured to sell to any advantage, and who therefore takes pains to have these mills operated by competent sawyers. Country sawed stock is, of course, not yet equal to the best output of first-class band mills, and it is not quite as economically produced, but it is in good enough shape to pass without complaint in the market, and it can be put there so much cheaper that, even allowing for a considerable percentage of extra waste, and possibly some slight difference in selling value, it can still show a large profit to the maker.—Hardwood Record.

---

Mr. Ross Staples has recently started up a new saw and shingle mill at Franklin, Ont., adapted for cutting all kinds of hardwoods and heading.

Why does not some inventor wind up his thinking spring and bring out something which will supersede the drag saw? The roughness of the butts of shingles from blocks cut by such a saw is a great detriment, quotes a contemporary.

The total area of forests and woodland in Belgium is 1,223,568 acres. Of the forest lands 774,084 acres belong to private individuals, the rest to the state, municipalities or to public institutions. The average returns from the sale of lumber average $4,166,000.

# Sea-Going Rafts on the Pacific Ocean

By EDWARD K. BISHOP.

IF some ship-builder of old, with the lines of his primitive vessel in mind, could survey the oceans now, he would doubtless be as much amazed at some of the strange craft putting to sea from the Columbia river as at the modern warships or ocean greyhounds. In truth, many builders well acquainted with the present systems of marine architecture and engineering would view for the first time such craft, while the layman might hesitate before deciding whether to pronounce them monsters of the deep or some freak in ship-building. They can hardly be classified as ships, even though designed to go to sea, or as barges, though great freight-carriers; they are, in short, huge rafts of round timbers or lumber, bound by cables, chains and bolts in a scientific and ingenious manner, the method of construction having been evolved after many experiments in this little-tried field.

For several seasons past rafts of logs have been towed to San Francisco, Cal., and the journey has been completed in safety a sufficient number of times to demonstrate that the method of transportation is practicable as well as profitable. This year rafts composed wholly of lumber, and of totally different construction, have made their appearance, and every one interested in lumber or the carrying trade on the Pacific coast is watching the experiments with great interest, as the establishment of this method of transportation would revolutionize the coastwise carrying-trade, and, by its great saving in cost, drive the sailing vessels and steam schooners out of business, or force a large reduction in charges.

Both log and lumber rafts are still looked upon as objects of curiosity on the Pacific coast, and more or less the projects of men who will take great risks. The former operates in a comparatively restricted field, and will probably never change existing conditions to any great extent, as many think the lumber raft is destined to do; but it has already stood the test of several seasons, and the methods of its construction will be treated first.

A CRADLE IN PROCESS OF CONSTRUCTION, BEFORE LAUNCHING.

Ten years ago considerable attention was directed to the first raft of logs ever built for an ocean trip. It was towed from the Bay of Fundy to New York city. Since then a number have entered that harbor, but at the present time the centre of activity in this line is on the Pacific coast of North America, where a company has been incorporated for the express purpose of transporting the timber of Oregon and Washington to San Francisco by means of rafts. The problem of incorporating material as unpromising as round logs into a vessel sufficiently stanch to make an ocean trip of 650 miles is a peculiar one, and few have seen the actual work of construction.

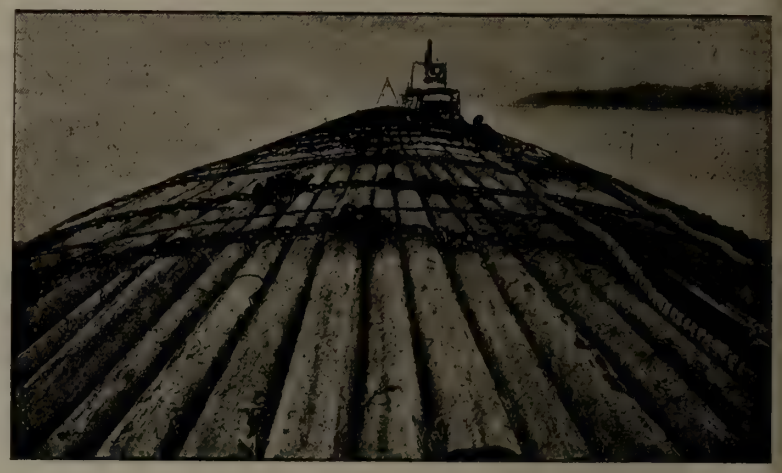
In contrast to ordinary boat-building, the cradle for this unique vessel is constructed on land and launched, leaving the work on the raft itself to take place in the water. The usual process of launching a completed vessel is replaced by drawing certain pins, causing the entire cradle to separate into two parts and allowing the raft to float freely in the river. At a short distance it then closely resembles one of the modern whalebacks, without any upper works, though a little closer inspection reveals the corrugated surface formed by the logs and the huge chains encompassing the whole. The timber composing it is of fir, and is chiefly for piling purposes and spars. No sticks shorter than 30 feet are used, and many measure 110 feet.

The cradle is composed of forty-three inverted bents, twelve feet apart, and the logs extend twelve feet over at each end, making the completed length 528 feet. The posts of the bents are 8 × 10 timbers; with caps, 10 × 20. The desired contour for the bottom of the raft is secured at each bent by 30° and 60° bearers, supplemented by gluts designed to produce a form as nearly circular as possible. The various bents are joined together longitudinally by a series of 12 × 12 timbers, or waling—6 altogether, 4 being at the bottom and 1 on each side.

As already stated, the construction allows the final separation of the cradle into two parts, the line of cleavage corresponding closely to that of the keel of a boat. The division is rendered possible by the manner of joining the posts at each bent. One post is bolted to the 10 × 20, mentioned above, which extends the entire width at the point considered, while the other is fastened at right angles to an 8 × 10 and a 3 × 10, strapped together, with sufficient space left to allow the 8 × 20 to slide between, and long enough to reach half the distance between the posts. Thus it will be seen that the two sides of the cradle are entirely distinct, the connection being made by sliding one timber into the channel formed by the other two, and can be made into a rigid whole only by fastening the sliding member so that no motion is possible. This is done by pinning the three pieces together by a two-inch iron rod, so arranged that, when the raft is completed, power can be applied to withdraw each pin. Upon such withdrawal the cradle slides apart, releasing its burden.

When the cradle has been built and launched, it is towed to the desired location, which in the Columbia has been in fifty feet of water near the mouth of a slough, and is fastened in its place by a row of piling on one side, each pile passing through a tie box, connected with a bent, which allows the cradle to rise and fall with the tide, and also to sink deeper as the load increases. When completed, the raft draws about twenty feet of water.

In order to bind the raft together, the constituent piling must be very carefully selected. No swell butts or crooked sticks are accepted. The minimum length of a pile is thirty feet, and the butt must not be less than twelve inches or more than 15 inches in diameter. Even with such timber, it is a source of wonder that a raft can be built to stand the ordinary swell of the ocean, not to mention the heavy seas frequently encountered, until it is noted with what care each piece is fitted into place, and the whole chained so that the pull on the towline actually binds it more firmly together. The logs are brought beside the cradle, where two large steam derricks, built on scows, are placed to hoist them into position inside. The raft grows, piece by piece, till the cradle is completely filled, when it is ready for the chain work which is to bind the whole together.



A RAFT UNDER TOWAGE.

In form the raft closely resembles a cigar with each end cut off. It is designed that a section taken at any point should be a circle, but in practice most of the upper face is somewhat flattened. Each end is a perfect circle, twelve feet in diameter, and the size gradually increases till the width is fifty feet. After the raft leaves the cradle, its shape is maintained by chains, made of 1¼-inch iron, encircling the raft at intervals of twelve feet, and by wire cables running both longitudinally and transversely. The termination at each end is a stout bulkhead of four-inch plank, spiked to the ends of the logs. Outside of the plank are two upright round timbers, and the double cable, extending the entire length of the raft, joins the corresponding timbers together. The transverse cables connect the encircling chains a little below the water line, thus preventing the raft from spreading.

The method of connecting the towline to the raft is ingenious and effective. Through the exact centre extends a heavy chain of 1¾-inch iron, with a series of smaller chains attached at regular intervals and connected by shackles to those encompassing the raft. Near the middle these chains extend at right angles to the centre line, alternately on one side and the other, except in the case of the last five at each end, where the circumference of the raft is rapidly diminishing, these being arranged in even pairs and slanting sharply toward the bulkheads at the ends, in a regular herring-bone plan, before joining the outside bands. Thus, when a pull is exerted on the towline, it is transmitted to every chain encircling the raft, and the heaviest strain will come on the rear end, which can better stand it. The logs cannot escape, as they are bound by the circles of chain and the increasing diameter of the raft exactly as are the staves of a barrel when an

attempt is made to draw the hoops over the centre. The amount of chain used is about 80 tons.

The completed raft contains 450,000 lineal feet of timber, or in the neighborhood of 3,000,000 feet board measure. The average length of the piles is 55 feet, and the average diameter at the butt 14 inches. The spars are of special dimensions.

Raft Before Astoria, at the Mouth of the Columbia River.

Auspicious weather is almost essential to a safe voyage of one of these unwieldy rafts, and they put to sea only at a time of year when storms are infrequent, though they successfully pass through weather much heavier than any that one would expect them to survive. In tow of an ocean steamer, the trip to San Francisco is made in about seven days. Several rafts have been taken out of Gray's Harbor, Washington, and this year will see the fifth start from the Columbia river. The first raft, in 1894, encountered a severe storm and went completely to pieces, but the succeeding ones reached their destination safely.

The shipping interests would gladly see the business discontinued, as there is always danger of several thousand logs being released on the face of the ocean—a great menace to the safety of vessels whose course lies in their vicinity. The risk which the owners assume when they put many thousands of dollars into such a venture will be more potent in keeping the number of rafts from becoming large than the fears of captains ; but the method of transportation is so economical that doubtless considerable quantities of the piling used in the neighborhood of San Francisco will find its way there in this form.

Captain Robinson, who was interested in the first raft of logs built on the Bay of Fundy, and who is in charge of those constructed on the Columbia river, has patented his methods of building the cradle and of placing the chains.

Lumber Raft Leaving Portland, Oregon, in Tow of a River Steamer.

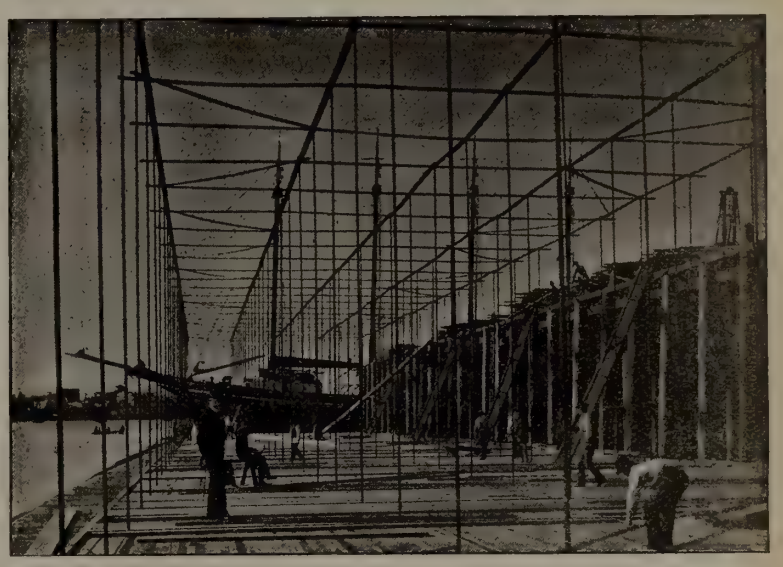
The first raft of lumber built to make the sea journey to San Francisco was constructed at Portland, Oregon, by Inman, Paulsen & Co., and left the Columbia river June 24, 1898, in tow of two tugs. It encountered a storm, and the wind, blowing at the velocity of seventy miles an hour, finally produced a sea which broke the raft in two. The fragments held together for two hours after the back of the raft had been broken, and finally one tug towed the forward part into the harbor of San Francisco, while the other succeeded after a time in picking up the remaining portion and towing it to the same port in safety. Only a tenth of the lumber was lost.

The raft which started in June contained 5,000,000 feet of lumber, and was 396 feet long by 53 feet wide. It is difficult to realize the immense quantity of material incorporated into this raft, though a comparative idea may be gained by considering the fact that the average capacity of large ocean vessels is little more than 1,000,000 feet. Portland already has the distinction of loading the largest cargo of lumber that ever left the Pacific coast, which was won last year when the Glenlochy took 3,000,000 feet of railroad material to Siberia. Now, to pile Pelion on Ossa, the new rafts appear.

The idea of shipping lumber in this way originated with Johan Paulsen, a prominent lumberman, whose attention was attracted to the subject last winter by the difficulty of securing vessels to take lumber to San Francisco, owing to the fact that the majority of those available had entered the Klondike and Alaska trade. Doubters scoffed at the idea of transporting lumber in such a form, but the long years spent by Mr. Paulsen in the lumber business had included experience in rafting on eastern rivers and lakes, as well as on the Baltic ; so, after looking at the project from a scientific standpoint and carefully considering all the difficulties connected with it, he concluded that a method of construction suited to an ocean trip of seven hundred miles could be evolved.

The raft projects very little above the surface of the water, and this greatly increases its chances for a safe trip, as the waves wash completely over it, encountering little resistance, instead of expending their force in battering it to pieces. This is a principle used in the construction of the famous whalebacks, and one which experience has proved to be valuable.

The first step in constructing this late arrival among the various types of marine architecture is to select a dock, or drive a line of piling, 400 feet long, as the basis of the work, and to supply a straight edge for the side of the raft. A stringer, or what might be termed a keel, is built for the entire 400 feet by fastening together five layers of two-inch plank with ends butted so as to ensure the greatest strength. Five of these stringers are made, and placed something like huge joists, ready for a floor, and are then planked over crosswise, making an immense platform 396 feet long and 53 feet wide. The bottom of the raft is now made, and the next step is to pierce each stringer, or joist, at intervals of 12 feet, and insert a long and heavy wrought-iron bolt, fitted with washer and nut below, certain planks being left loose up to this point, to allow their adjustment. The platform, which at first looked like a large dancing floor, is now so changed as to resemble an orchard with long rows of spindling trees. The purpose of these rods can be seen after the lumber is put in.



Arrangement of Bolts and Method of Placing Lumber in Raft-Building.

First, a layer of lumber is placed lengthwise ; next, another crosswise ; and so on, till a pile 21 feet deep is made, the raft gradually sinking as the load becomes heavier, and about a third projecting above the surface all the time. The rods serve to connect the bottom and top, and bind the mass into a homogeneous whole.

A very liberal factor of safety is allowed, as the aggregate strength of the 170 rods would support a weight of 25,000,000 pounds, while the weight of the completed raft is only 15,000,000 pounds out of water, and much less when submerged. The completed raft is encircled lengthwise by a 1¼-inch cable, to furnish a secure hold for the towline. The cable is of plow steel, and its strength is equivalent to that of a 14-inch hawser.

Before construction was commened, a prominent marine underwriter was approached in regard to insurance. He admitted that the danger of loss was not nearly as great as many people would suppose, but predicted that the promoters of the project would encounter difficulty in insuring the raft, because it is so radical a departure from the orthodox methods of transportation, and because, if successful, it would have a far-reaching effect upon the lumber-carrying trade on the coast. Mr. Paulsen has applied for patents on his novel lumber carrier, and he expects his raft to occupy a place beside the whaleback, which was at first an object of ridicule. An important feature in the construction of the raft is that only an insignificant percentage of the lumber is injured by nail or bolt holes, and even this can be utilized for firewood in California.

One of the principal objections brought against rafting is the probable staining of the lumber by immersion in the muddy current of the Willamette river and the salt water. Many claim that the concession in the price of the lumber which will have to be made on this account will balance the saving in freight charges, and say that at best only low-grade stuff can be so shipped to advantage.

Rafting of this kind is still in the experimental stage, and it is early to predict the ultimate result ; but, as this method of transporting lumber is only about half as expensive as the old, it is safe to assume that there will be a strong effort to make it a permanent success, and that the lumber trade of California and the Pacific northwest of America is likely to feel the effect of sea-going rafts.—The Engineering Magazine.

The American Monthly Review of Reviews for November makes an interesting assemblage of "Roosevelt cartoons," apropos of the Colonel's candidacy for the governorship of New York.

# NOTES ON BELTING.

## Tests of Leather, Rubber, Cotton and Other Belts.

By G. R. MacLeod, McGill College, Montreal.

For transmission of power by belting various materials are used. Among the most important are: Leather, rubber and cotton belts.

The material considered most favorable for belting is probably leather. It is very efficient and wears well, but is more expensive than rubber or cotton. In certain situations where it would be exposed to moisture, great heat, etc., its efficiency and durability are reduced.

Another weakness is that it must necessarily consist of short strips of about five feet in length, joined in various ways, which will be noticed later. The belt is therefore subject to failure in as many places as there are joints. Some methods, however, make the joints almost as strong as the solid leather, but the presence of the joint may cause the belt to fail, not from tension, but from a tendency to wear or crack at that point.

The best belts are made from oak-tanned ox-hide, the strongest part of the hide being the back. The belt can be made in long strips by taking a wide disc of leather and cutting it in a spiral direction. The strip thus cut is stretched taut and rubbed to make it straight. From a disc 4 ft. 9 in. wide a strip over 100 feet long of 2 inch belt can be made. If greater width is desired several strips can be sewn together side by side. A double belt of this kind has been used 75 inches wide and over 150 feet long.

The grain or hair side of the leather is put next the pulley. It would appear at first sight as if this were a mistake, since the grain side is the smoother and would therefore give less friction.

Mr. Arthur Archard, of Geneva, in a paper before the Institute of Mechanical Engineers, 1881, says:

"If the belt is wide, a partial vacuum is produced between the belt and the rim of the pulley, by the aid of an adequate velocity which causes the atmospheric pressure to press the belt close against the pulley; an adhesion is thereby produced which is totally independent of friction, and enables the tensions to be considerably reduced." This is very important, because the less the tension on the belt, the less will be the friction on bearings, and, hence, the greater power derived. A wide, thin belt is therefore better than a narrow, thick one, and this is so not only for the reason that it gives less tension on the belt, but because it also gives greater flexibility.

Mr. D. A. Low, in his Machine Designing, also states that the smooth side is the better "because it gives greater driving power," reasoning probably in the same way as Mr. Achard.

Mr. J. Tullis, of Glasgow, however, states that the belt will last longer if the grain side is out, and that coatings of curriers' dubbin and oil will make the flesh side as smooth as the other. All writers seem to agree that the adhesion of the belt to the pulley depends very little, if any, on friction, and that, therefore, a rough surface is more injurious than useful.

Rubber belting is superior to leather in damp places. The part of the belt that gives it strength is not the rubber, but the cotton framework.

It is made by taking a wide strip of cotton duck and folding it into as many plies as desired, with rubber in between, with a thicker coating of rubber on the outer side.

The rubber is in a liquid state when applied to the cotton, and when the belt is finished it consists of a strong, solid, flexible belt, having the appearance of solid rubber. There is almost no limit to the length that can be made in one piece, so that there is only one joint in any piece of belt in use. Even this can be avoided by ordering an endless belt for special cases. The manufactured product is usually very uniform in quality. Extremes of heat and cold have very little effect on it, and it has very little tendency to slip on the pulley. It should be kept free from all animal oils or grease, as these are injurious to the rubber. Rubber belting seems to be especially adapted for such purposes as elevators, for railways, pulp mills, mines, etc.

Cotton, that is cotton without rubber or any other material, makes an excellent belt. In can be made stronger than leather of the same cross-section, and of great length without joints. It is better than leather in moist places, and is less expensive. It was formerly made in the same way as cotton and rubber belting—that is, by laying one ply of cotton duck on top of another till the desired thickness was attained, and then sewing the whole together. The more modern method is to make the whole thickness together at one operation, each ply being interwoven with the one next to it. The process of manufacture is rather complicated, but this does not make the belt expensive.

An improvement on the plain cotton belt is made by soaking it in a mixture of red lead and linseed oil. This process has the same effect as it has in preserving wood. The cotton belt is then more efficient in moist places or in conditions which are found very unfavorable to the use of leather or even rubber. Some modifications of this kind of belt are made by substituting for part of the cotton a woof of hair and other materials. An example of this is the "Camel Brand," tests of which are reported below.

Gutta percha has been used as a substitute for rubber, and has been found to be a good protection to the cotton. A special brand of this, called "Balata Belting," was tested. It is manufactured in England, and has a rather thick coating of gutta percha on the outer side, and thin layers between the layers of cotton, while the side next the pulley is coated with a solution called "Balata."

### STRESSES IN BELTS.

Belts are subject to two kinds of stress, viz., tension and bending, but the most serious strain is caused by bending round the pulleys. If the pulleys are small, the only way is to use the most flexible material. This will probably be the cheapest in the long run.

A good rule is given by Lineham in his Mechanical Engineering, viz., the distance from centre to centre of pulleys should not be less than six times the diameter of the larger pulley.

A most important matter is that the edges of the belt should wear well. If the edge is not good it will soon become frayed by contact with the rim of the pulley, and will cause failure of the belt. The best edges that the writer has seen on any belt are on good oak tan leather, and on rubber. The structure of the latter (folding), together with a strong covering of rubber, secures a good, compact edge.

Belts of paper have been made and used in the United States with success. They are very strong and durable if not exposed to moisture, and they stretch very little while at work.

So far nothing has been said with regard to stretch of belts under tension. This will be treated along with the results of the tests.

Creep in belts is due to the belt stretching on the tight side. If the belt stretches easily this is very serious. For every foot of belt that goes on the driver less than a foot goes off and goes on to the follower. If the diameters of the pulleys were equal the driver would make a greater number of revolutions in unit time than the follower would. Hence, if there is much stretch in the belt there is a loss of speed. This loss amounts to 1 per cent. to 3 per cent., depending on the elasticity of the belt; since the tension on the belt is kept as low as possible to prevent too much friction on bearings of the pulleys, the belt that is least extensible at low tensions is the one which is most valuable in this respect.

### JOINTS AND FASTENINGS.

Joints form the weak feature of belts, so far as tensile strength and wear are concerned, especially in the case of leather belting. They are of two kinds, (a) permanent, (b) temporary.

Permanent joints take many different forms. In leather belting the most common is the laced joint (Fig. 1.) A lap-joint splice is made and cemented together; then two or three rows of rawhide lacing is put in. The holes for the lacing are not punched, but two sharp cuts are made for each stitch. The cuts should lie diagonally so as to injure the longitudinal fibres as little as possible.

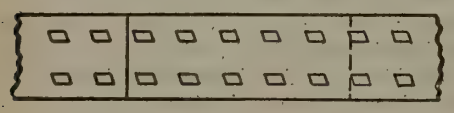

Fig. 1.

Fig. 2.

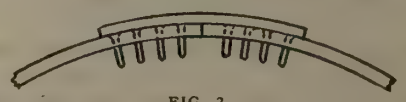

Fig. 3.

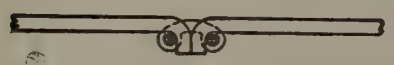

Fig. 4.

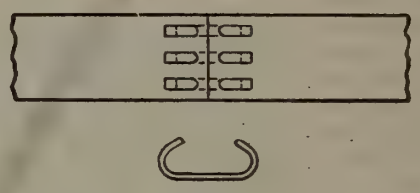

Fig. 5.

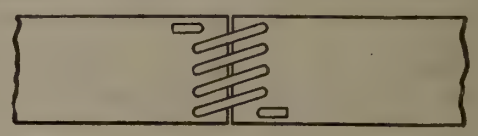

Fig. 6.

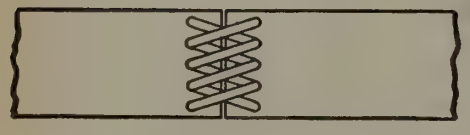

Fig. 7.

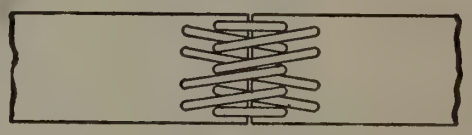

Fig. 8.

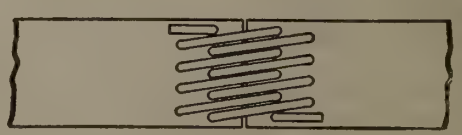

Fig. 9.

Copper riveting is used as a substitute for lacing, the belt being spliced, as before, and a number of rivets inserted (Fig. 2.) This joint shows a tendency to break across a row of rivets, and is only about two-thirds the strength of the solid belt.

Harris metal plate fastener (Fig. 3) consists of a slightly curved plate, same width as the belt, with a number of spikes. The belt is cut with square ends, and the spikes are driven first through one piece and then the other. As the plate is curved and the spikes are perpendicular to it, they take a good firm grip on the leather. The spikes are clinched after connection.

In Lagrelle's fastener (Fig. 4) the ends of the belt are cut square and bent up. Strips of steel or iron are run through the holes cut for the purpose, each strip having two eyes to hold pins. These pins run through strips at each end, and form a wide link. In fasteners such as this the strain is distributed over the width of the belt, and there is also not the same tendency to cut through in front of the holes as in many other kinds.

### TEMPORARY FASTENINGS.

The fastener shown in the accompanying sketch (Fig. 5) consists of a curved strip of iron. The ends of the belt are cut square and holes are made to receive the fastenings, which are inserted and hammered flat.

Laced Joints. There are many forms of laced joints. The simplest is shown in Fig. 6.

Fig. 7 is the same joint as Fig. 6, but double laced.

Fig. 8 is a double laced joint with only one strand in each hole.

In the joint shown in Fig. 9 the holes are staggered; there is only one strand in each hole, and the strands do not cross on each other.

These are the commonest forms. Fig. 6 has hardly enough lacing; Fig. 7 has twice as much lacing as Fig. 6, but concentrates all the stress on a single row of holes. Joints like Fig. 8 and Fig. 9 give about the greatest possible strength of lacing.

The holes for the lacing are usually round punched. Awl holes are not so good. D. A. Low, Machine Designing, says that the holes should be oval punched, and should have the long diameter parallel to the edges of the belt. And on the face next the pulley the lacing should be as nearly parallel to the edge as

possible. It is also better if the lacing does not cross on itself.

Double belting, generally speaking, is not so good as single, since flexibility is what is required. It has been found, however, in certain cases, such as the belt for a return saw, that a double belt wears best, being better able to stand the alternate stretching and buckling.

RELULTS OF TESTS.

Tests of belting were made in McGill College testing laboratory in 1896-7 on the Emery testing machine. When pressure from the accumulator is admitted gradually the diagram curve of extensions is quite smooth and regular, but when the machine is fed rapidly the extensions are less; this becomes more noticeable in belt testing. It shows as a sharp change in the curve, but when the feed is again better regulated the curve resumes its former course. In some cases these sharp changes in the curve may be due to lack of uniformity in the material, particularly in the case of belting composed of cotton and hair. Extensions were read at every 200 pounds increase of load, except in some of the larger specimens, where readings were taken every 500 pounds increase.

Leather Belting.—Specimens were procured from a dealer in Montreal.

NO. 1.—ENGLISH OAK TAN LEATHER.

Width, 2 in. Sectional area, .453 square in.
Weight, .213 lb. per lineal foot.
Cost, 23 cents per ft.
Total stretch in 24 in. was 2.15 in. = 9 per cent.
Permanent stretch, 0.2 per cent.
Maximum strength, 2,210 lbs. per square in.
This specimen contained a spliced cemented joint and laced in the same manner as first example described under "Joints." It broke straight across the middle of the joint.

No. 2.—(Same belt as No. 1, but without joint.)
Maximum strength, 4,640 lbs. per square in.
This shows that the strength of the joint is about one-half the strength of the solid belt.

NO. 3.—HEMLOCK TAN LEATHER.

Width, 3½ in.
Sectional area, .798 square in.
Weight, .206 lbs. per ft.
Cost, 43 cents per ft.
Total extension was 3.11 in. in 18 in. = 18.3 per cent.
This specimen has a cement splice without lace or rivets. It failed at 3,300 pounds per square inch.

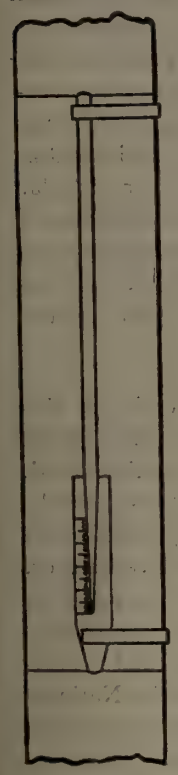

Fig. 10.

Fracture took place, not in joint, but immediately at its edge.

A solid piece of this belt stood 4,000 pounds per square inch.

An unlaced cemented joint is stronger than a laced one, but lacing is necessary where the belt is exposed to heat or moisture.

RUBBER BELTING.

The specimens tested were manufactured by a Canadian company.

The curve of extensions is almost a straight line with a slight tendency to turn upwards immediately before fracture. This straight line indicates that the extensions are about the same for each increment of load, and hence that the material is very uniform. Another fact that shows the uniformity of the material is that the fracture in each case was clear and straight across the belt. It was not a tear but a break.

The method of measuring the extensions is shown by Fig. 10. Two pencil lines are ruled square across the belt exactly thirty inches apart. A scale graduated to hundreths of an inch is clamped with one end at the lower mark.

A long steel pointer is clamped at the other mark. As the belt stretches this pointer moves along the scale, thus giving the amount of stretch, which can be read in hundredths.

Fig. 11 shows the method of holding the specimen. A piece of steel rod a is placed in the loop of the belt, to take up the pressure from the two rods bb, whose section is a semi-circle; bb are fitted into grooves and are free to move, so that the pressure from them is always directed towards the center of a. A separate piece of belting c is placed between the jaw and the specimen to protect the latter from being cut by the jaws. Four bolts d are used to tighten the jaws. When the belt stretches its thickness is diminished. The bolts are then tightened more to prevent slipping. The jaws are connected to the piston of the ram by a ball and socket joint. They can thus adjust themselves to any unevenness in tension.

SPECIMEN NO. 1.

Width, 4 in. Sectional area, .84 square in.
Weight, .4768 lb. per lineal ft.
Cost, 42 cents per ft.
Broke at 4,170 lbs. per square in.
Total extension in 30 in. = 3.00 in. = 10 per cent.
Permanent extension, 0.13 per cent.

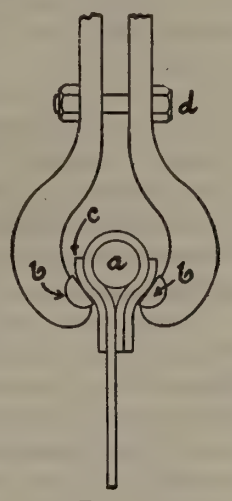

Fig. 11.

SPECIMEN NO. 2.

Width, 5 in. Sectional area, 1.1 square in.
Weight, .635 lb. per lineal ft.
Cost, 52 cents per ft.
Broke at 4,270 lbs. per square in.
Total extension, 14.9 per cent.
Permanent stretch, 3.0 per cent.

SPECIMEN NO. 3.

Width, 6 in. Section, 1.505 square in.
Weight, .844 lb. per lineal ft.
Cost, 62 cents per ft.
Broke at 3,790 lbs. per square in.
Total stretch, 16.4 per cent.
Permanent stretch, 3.0 per cent.

SPECIMEN NO. 4.

Width, 8 in. Section, 1.92 square in.
Weight, 1.032 lbs. per ft.
Cost, 84 cents per ft.
Broke at 3,700 lbs. per square in.
Total stretch, 17.0 per cent.
Permanent stretch, 1.9 per cent.

SPECIMEN NO. 5.

Width, 10 in.
Weight, 1.1434 lbs. per lineal ft.
Cost, $1.07 per ft.
Maximum load, 3,320 lbs. per square in.
Total stretch, 13.9 per cent.
Permanent stretch, 1.6 per cent.

SPECIMEN NO. 6.

Width, 12 in.
Weight, 1.2806 lbs. per lineal ft.
Cost, $1.30 per ft.
Maximum load, 3,540 lbs. per square in.
Total extension, 14.5 per cent.
Permanent extension, 2.4 per cent.

SPECIMEN NO. 7.

Width, 14 in.
Weight, 1.812 lbs. per ft.
Cost, $1.54 per ft.
Maximum load, 3,620 lbs. per square in.
Total extension, 15.8 per cent.
Permanent extension, 2.0 per cent.

CAMEL BELTING.

This belting is made partly of cotton and partly of coarse camel hair, said to be the combings of camels. The cotton is the material which forms the chief strength and therefore the longitudinal fibres are cotton. The hair yarn forms a woof, although in some of the specimens tested there were strands of hair running longitudinally as well as transversely. The two materials being interwoven in several plies, the belt is soaked in red paint and allowed to dry. The paint forms a good body coating, which protects the belt from moisture and makes it very durable. To prevent the belt from becoming stiff and hard an occasional coating of castor oil and tallow should be applied; but any resinous mixture is injurious. In making the lace holes a sharp awl should be used instead of a punch, as the latter cuts the threads and thus weakens the belt.

SPECIMEN NO. 1.

Sectional area, 4.35″ × 29″ = 1.262 square in.
Weight, .5717 lbs. per ft.
Cost, 33 cents per ft.
Total extension, 31.9 per cent.
Permanent extension, 11.6 per cent.
Maximum load, 5,960 lbs. per square inch.

SPECIMEN NO. 2.

Section, 5.07″ × .24″ = 1.22 square in.
Weight, .599 lb. per ft.
Cost, 39 cents per ft.
Total stretch, 35.1 per cent.
Permanent stretch, 4.45 per cent.
Maximum load, 5,570 lbs. per square in.

SPECIMEN NO. 3.

Section 6.1″ × .28″ = 1.71 square in.
Double or "Russian Brand."
Weight, .7995 lb. per ft.
Cost, $1.00 per ft.
Total extension, 24.5 per cent.
Permanent extension, 7.1 per cent.
Maximum load, 5,900 lbs. per square in.

SPECIMEN NO. 4.

Section, 5.95″ × .22″ = 1.31 square in.
Weight, .599 lb. per ft.
Cost, 48 cents per ft.
Total stretch, 27.6 per cent.
Permanent stretch, 12.9 per cent.
Maximum load, 5,650 lbs. per square in.

SPECIMEN NO. 5.

Section, 6.1″ × 30″ = 1.83 square in.
Weight, .781 lb. per ft.
Cost, 58 cents per ft.
Total stretch, 20.6 per cent.
Maximum load, 5,360 lbs. per square in.

SPECIMEN NO. 6.

Section, 12.20″ × .31″ = 3.78 square in.
Weight, 1.705 lbs. per ft.
Cost, $1.33 per ft.
Total stretch, 38.0 per cent.
Permanent stretch, 19.3 per cent.
Maximum load, 5,160 lbs. per square in.

A glance at the curves shows that for small loads the extensions are uniform and even have a tendency to decrease until a certain limit is reached. The elastic limit comes much sooner than in rubber and leather, and there is an enormous extension at the ultimate strength.

The ultimate strength is much greater than that of rubber and leather, etc., but the belt would never be used in such high tension.

PATENT "BALATA" BELTING.

This kind of belting already described seems to be very good. It is very strong, and the amount of stretch is small.

The gutta percha is said to bend over small pulleys with more ease than rubber, and it is also claimed it resists heat and moisture better. It has cheapness in its favor, and is likely to become a popular belt. Only one specimen was tested:

Section, 4.45″ × .22″ = .979 square in.
Weight, .433 lb. per ft.
Cost, 46 cents per ft.
Total stretch, 15.7 per cent.
Permanent stretch, 4.4 per cent.
Maximum load, 5,210 lbs. per square in.
Table showing comparative value of belts:

| Kinds of Belts. | Ultimate strength. Per Square In. | Ultimate strength. Per Lb. per Ft. | Total Stretch. | Stretch at 400 Lbs. per Square Inch. | Permanent Set. |
|---|---|---|---|---|---|
| Leather. | 4,320 | 12,200 | 10.5 to 18.3% | 1.0% | 0.5% |
| Rubber | 3,773 | 7,296 | 14.6% | 2.2% | 2.05% |
| "Camel" | 5,860 | 12,050 | 29.6% | 2.2% | 13.1% |
| "Balata" | 5,210 | 11,750 | 15.7% | 1. 6% | 4.4% |

The column "Strength per lb. per ft.," gives a fair idea of the proportionate driving power that can be got out of the same weight of different kinds of belt.

The last two columns show the comparative values with regard to stretch.

PRICES.

Leather.....10 cents per ft. for 1″ belt, to $12.00 per ft. for 72″
Rubber.....21 cents per ft. for 2″ belt, to $6.72 per ft. for 52″
"Camel".....12 cents per ft. for 2″ belt, to $1.33 p r ft. for 12″
"Balata".....21 cents per ft. for 2″ belt, to $1.30 per ft. for 12″

The "Camel" belting is by far the strongest, but its stretch is greatest. Where it can be used, the leather is probably the most economical, although it is verv expensive in large widths. It is the lightest, and less power is lost by stretch.

The gutta percha comes next for lightness and driving power, and would therefore seem to be the most serviceable belt of all. But it is hardly fair to come to such a conclusion when only one specimen was tested.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## LEGALITY OF THE MANUFACTURING CLAUSE.

THE International Commission sitting at Quebec adjourned early last month, to again convene, at Washington, on the tenth of November. Meantime, the interest surrounding the timber question has not relaxed, but rather more vigorous efforts have been put forth by those concerned to make such representations as will be likely to accomplish their desires.

The most recent and important feature of the controversy is a memorandum issued by Hon. Mr. Hardy, Premier of Ontario, bearing upon the constitutionality of the clause compelling home manufacture of timber. The statement is a concise review of the situation, and seems to show clearly that the action taken by the Ontario government was within their powers. After pointing out that the timber licenses are granted subject to such conditions as may be imposed by the Crown, Mr. Hardy quotes the British North America Act assigning to the province jurisdiction over the timber lands. As to the power of the Dominion government to disallow the act, it is contended that this should not be exercised except in the case of acts which are illegal or unconstitutional, or which affect the interests of the Dominion generally. This is the principle on which the Federal government acts in relation to disallowance of provincial legislation, and to interfere with the present law would be contrary to all precedent.

Mr. Hardy also treats the question from the standpoint of forest preservation in a manner which is in keeping with the prevailing feeling in Canada. The unwise policy of the state of Michigan has resulted in the depletion of her forests, forcing the lumbermen to seek raw material in Ontario. While our forests are now extensive, a comparatively short time only would elapse before the Michigan lumbermen, if given free access to our forests, would exhaust the timber supply adjacent to the Georgian Bay shore.

The Ontario government, at the command, we may say, of the people, have taken up the weapon to protect Canadian industries and Canadian lumbermen. They have announced a policy to which they will adhere, only swerving therefrom in consideration of the concession which has been asked, namely, free lumber for free logs.

Recent events give strong encouragement to Canada to conserve her forest wealth instead of permitting logs and pulp wood to be exported to the United States. The proposed establishment of pulp and paper mills at Sturgeon Falls, Ontario, at a cost of one million dollars, is in itself particularly significant of possible development. There is every indication of a large and healthful growth of the wood industries of this country.

## THE MONTREAL, OTTAWA AND GEORGIAN BAY CANAL.

THE project to construct a canal uniting the waters of Lake Huron with those of the St. Lawrence river via the Ottawa river has received some encouragement of late, and it can at least be said that there is a reasonable prospect of the uudertaking being carried out in the near future. The report of the special committee of the Senate of Canada upon the feasibility and advantages of such a waterway has been distributed. In this facts are presented which would certainly seem to justify the government in giving such assistance to the scheme as would secure its early completion.

The cost of the construction of the canal is estimated at $17,000,000, and the Dominion government is asked to guarantee two per cent. on that amount for a period of twenty years, which would be $340,000. But the promoters claim that the canal would pay almost from the time it is completed, thus reducing the responsibility of the government. For the purpose of safety, however, it would be well to assume that assistance to the extent of $340,000 annually would have to be given for twenty years. The question then is, would the advantage to the country be sufficient to warrant the expenditure?

No one will dispute that the lack of direct water communication between Lake Huron and the St. Lawrence has affected commerce and retarded the development of the northern section of the province and of western Canada. Owing to the great distance, the existing water route from Sault Ste. Marie, via Lake Huron, Lake Erie, Welland Canal, Lake Ontario and the St. Lawrence river to Montreal, cannot be employed with profit for the transportation of many classes of goods. By the construction of the proposed ship canal, a natural outlet would be provided for immense quantities of grain, timber products and general merchandise. It would open up new timber lands, and give an impetus to the establishment of pulp mills.

The advantage of the Ottawa route is well illustrated by the saving in distance between western lake ports and ocean navigation. From Chicago to Montreal the distance via the St. Lawrence is 1,290 miles, and via the proposed ship canal 950 miles—a difference of 340 miles. From Duluth there is a like saving of 340 miles. It will thus be seen that grain from Lakes Michigan and Superior could be laid down in Montreal at a lower rate of freight, and much trade that now goes by way of the Erie canal would be diverted to Canadian ports.

The feasibility of the undertaking has been favorably reported upon by eminent engineers, and the work will, it is believed, involve no physical difficulties. The distance from the mouth of the French river, on Lake Huron, to Montreal, is 430 miles. Of this distance 351 miles are already a perfect natural navigation, requiring no improvement, while it is said to be practicable so to improve the remaining 79 miles as to convert the chain of waters into a first-class navigation highway for vessels. The length of canalling, exclusive of the Lachine canal, would be about 21 miles.

The project is one of such magnitude that it could scarcely be expected to be undertaken by private capital, and the great commercial advantage likely to accrue to the trade of Canada would, we think, justify the government in guaranteeing the money asked to ensure its construction, which would be a boon to the lumber industry of this country.

## EDITORIAL NOTES.

THE question may be asked as to the extent to which the axe is likely to be superseded by the saw for cutting down trees in connection with lumbering operations. A partial answer to this is found in some correspondence received from the Maritime provinces, in which it is stated that a number of the lumbermen have discarded the axe entirely, and are now using the saw for cutting down the timber. Considering the saving of timber thus effected, which is estimated at from five to ten per cent., it is rather singular that the saw has not been more generally adopted for this purpose. Another advantage claimed is, that when the men become accustomed to using the saw, they can accomplish a greater amount of work in a given time.

SIMULTANEOUSLY with the publication of this number, a meeting of the National Hardwood Lumber Association is being held in Cincinnati, the desired outcome of which is to secure the adoption of a uniform set of grading rules for all the hardwood markets of the United States, or, failing this, for as many of them as possible. Efforts are being put forth to have a representative meeting of both manufacturers and wholesalers. It will be remembered that the National Hardwood Lumber Association was organized in May last, and adopted a set of rules. These do not appear to have given satisfaction, and it is now proposed to make some desired amendments with a view to their more universal adoption. We learn that throughout Ontario much interest is taken in this movement, owing, of course, to the quantity of hardwoods marketed in the Eastern States. It is earnestly hoped that, by the action of this association, the lumbermen of Ontario will be sufficiently aroused

from their legarthy to follow in the footsteps of their neighbors. Just as certain as uniform grading rules are required in the United States, are they likewise a necessity in Canada, and particularly in Ontario, where hardwoods are found in greater abundance than in the other provinces. It would also seem a less difficult task to frame rules that would apply to the various districts of Ontario than to the extensive markets of the United States.

The final report of the Ontario Forestry Commission appointed last year will be presented at the coming session of the provincial legislature. The Commission will then have fulfilled its duties, so far as its present appointment is concerned. Taking, for guidance, the preliminary report submitted last December, we have reason to anticipate a volume of information and recommendations of very great value. The early work of the Commission was much along the line of ascertaining the reproductive qualities of white pine, the results of observation and investigation being of the most encouraging nature. In the final report the question of reforestization will no doubt be dealt with in a more practical manner, and some recommendations submitted to the government regarding the future timber policy of the province. This policy must bear some relation to the quantity of timber owned by the Crown, with regard to which estimates greatly vary. With a view of ascertaining as nearly as possible the extent of the timber lands of Ontario, the Commission have visited various districts in the northern part of the province, and are understood to have found a greater quantity of both pine and spruce timber than was anticipated. It is much to be desired that the work which the Commission has commenced should be continued until we are placed in possession of reasonably accurate data regarding the supply and localization, not only of pine and spruce, but also of hardwood timber.

## PERSONAL.

Mr. Thomas Cowan, of the firm of Cowan & Co., manufacturers of woodworking machinery, Galt, Ont., died last month.

Mr. R. B. Bryce, of Glasgow, Scotland, who is an extensive lumberman in the old country, has been travelling through Canada for some weeks.

We regret to learn of the serious illness of Mr. James L. Burton, the well-known lumberman of Barrie, Ont., and hope that he may soon be on the road to recovery.

Mr. W. R. Ledger, of the Ontario Crown Lands Department, is receiving the congratulations of his friends, on the occasion of his recent marriage. The bride was Miss Smith, of Little Britain.

After being confined to his home for several weeks by serious illness, necessitating a surgical operation, Mr. George A. Anderson, of the wholesale lumber firm of J. G. Cane & Co., Toronto, has recently resumed his business duties.

Messrs. Bertram & Son, of Dundas, Ont., are about to make extensive additions to their works, in order to meet the requirements of their growing trade. It is the intention to roof in the space between the several individual buildings, and in this way, and by removing entirely out of the way one of the old buildings, to gain some 12,000 square feet of floor area. The company are at present filling orders for lathes and other iron-working machinery for customers in Russia, France and Great Britain. They are also manufacturing a large shear weighing 50 tons to be used for cutting up into scrap iron the iron in the old Victoria bridge at Montreal. The machine is to be installed in the Hamilton Rolling Mills.

"GALL."

(Rough Draft of Explanatory Design to accompany Mr. Hardy's Memorandum in reply to Messrs. Dickenson and Lansing, of Michigan.) [From the Toronto Globe.]

## CALCIUM CARBIDE FROM SAWDUST.

The experiments that are being made at the mills of W. C. Edwards & Company, New Edinburgh, Ont., to determine the value of sawdust for producing calcium carbide and other commercial products, continue to be of an encouraging nature. On October 18th a test of the machinery was made before a large number of Ottawa lumbermen and other interested persons, including the following: Prof. Ruttan, of McGill University, Montreal; Messrs. J. R. Booth, F. P. Bronson, G. B. Greene, David MacLaren, R. M. Cox, J. F. Booth, J. A. Cameron, Hon. David Mills, Sir Louis Davies, Sir Henri Joly, Lt.-Col. Anderson, Major Gordeau, John Gilmour, Allan Gilmour, W. J. Conroy, J. C. Edwards, A. H. Edwards, H. A. Bate, H. N. Bate, W. A. Cameron, Ward Hughson, D. Murphy, Capt. Murphy, C. E. Read, H. McPherson, and Mr. Burdette, of Burlington.

The test was most satisfactory, and gives the promoters every reason to expect the ultimate success of the scheme. The machine was shown producing oil, acid, gas and carbon, and samples of the pyroligneous acid were taken by Prof. Ruttan to test at McGill University.

The machine runs automatically; first the sawdust goes through a drying process by having all the excess of heat contained in the burned gases forced through the sawdust in a drying kiln. This dried dust is carried by an elevator to the top of the retort, and by means of an automatic feed is supplied to the machine as quickly as it is required. The retort is an upright iron cylinder, between 15 and 20 feet high, and about 3 feet in diameter, surrounded by brickwork. Within the retort are a series of hoods on a central hollow revolving axle, which has perforations under the hoods. The various gaseous products escape through the lower end of the retort, where the liquid products are condensed and separated, escaping through two outlets. At one passes off a mostly wood creosote, which can be utilized for a variety of purposes, and from the other crude pyroligneous acid, from which can be prepared wood alcohol, acetic acid, and various other products. The gases pass through a purifying process, and after being highly heated are forced through the sawdust as it passes down the retort. The excess of gases pass into the furnace, supplying heat, which is practically sufficient to carbonize the sawdust in the retort. The carbon prepared from the sawdust passes out through an opening for the purpose in the lower end of the retort. Carbon derived from this source, owing to its density and purity, is superior, and produces what is known as charcoal iron, which commands the highest price in the market. Calcium carbide, derived from this source of purified carbon, is worth from $60 to $70 per ton. As the mills in the neighborhood of Ottawa produce about 900 tons of sawdust per day, it is easily understood that, if the hopes of the experimenters are realized, Ottawa will reap enormous benefits.

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the Canada Lumberman Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated; the cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

# THE RETAILER AND Wood-Worker

## UNIQUE SPECIMEN OF WOODWORK.

AFTER sixteen years of labor, off and on, Llewellyn Cunningham, of 184 Adams street, Dorchester, N.B., has recently completed a table which stands unique as a specimen of handiwork with carpenters' tools. When it is stated that in the construction of this piece of furniture the maker has utilized over 160,000 separate pieces of wood, the reader will have a slight idea of the magnitude of the task. It is not alone in this, however, that the interest in the table lies, for included in the immense number of pieces worked into its construction there are 270 different species of wood, from all parts of the world, as well as relics from railroad disasters, floods, big fires, battle-fields and old government ships, and others commemorative of important events.

Mr. Cunningham began work on the table in 1882, then having considerable leisure at his disposal, and from that time until the present he has worked a few hours each day upon the affair. During all these years he has kept strict account of the hours so spent, and he reckons them at 3,692. The result is that in its completed state the table is not only ornamental, but useful as well. By Mr. Cunningham's ingenuity, patience and perseverance, he has worked every piece together, however small, into odd and striking designs, which are inlaid on the top, bottom and legs. The central design in the top is a checker board, which contains the largest pieces to be found in the table. These are 1½ inches square. The finest work, into which are worked the smallest pieces, figures about 1,200 of them to the square inch. Of the various soft woods, a very small piece of each has been utilized. Of the hard and rare woods many pieces of the same kind were used. These woods were obtained at considerable expense and labor, and came from every state and territory in the United States, as well as from Nova Scotia, New Brunswick, Prince Edward Island, Cape Breton Island, British Columbia, Quebec, Manitoba, Mexico, Chile, Peru, the Andes Mountains, Bolivia, United States of Columbia, Honduras, Venezuela, the Guianas, Ecuador, Brazil, Argentina, Rio de Janeiro, Trinidad, Russia, China, Japan, Siberia, Asia Minor, Turkey in Asia, Constantinople, Austria, Hungary, Prussia, Poland, Sweden, Lapland, Italy, France, Spain, Portugal, England, Ireland, Scotland, Norway, Greece, Cyprus, Sicily, Sardinia, Borneo, Sumatra, Singapore, Arabia, Persia, Madagascar, Liberia, Australia, Zanzibar, Africa, Cairo, Tasmania, Sandwich Islands, Society Islands, Samoa, Cuba and Porto Rico.

Among the many important events from which relics are worked into its construction are the railroad disaster at Ashtabula, Aug. 29, 1876; Spuyten Duyvel, Jan. 13, 1882, and the Quincy wreck, Aug. 19, 1890; also the big fires of Portland, Me., in 1860; Chicago, in 1871; St. John, N.B., in 1877; Boston, in 1872, and Seattle, Wash., in 1889, and the floods of Mill River, 1874, and Johnstown, in 1889.

Other interesting souvenirs are from the old government ships Ohio and Merrimac; a piece of the Benedict Arnold house in New Haven, Ct.; a piece of the Judges' cave and the old Yale fence in the same city; a piece of shrub near Ledyard monument on the hill opposite New London; a piece of the old Liberty elm, Boston, and the old Washington elm, Cambridge; a piece of a wrecked car at the Pittsburg riot in 1877; a piece of the stock of a rifle shot off at Gettysburg, July 1, 1863, and a piece of the deck load of the barkentine Herbert Fuller, when she lay in Halifax harbor.

## MAKING FIGURED VENEER.

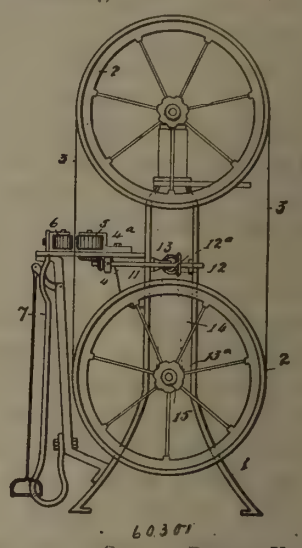
THE Timber Trades Journal, of London, England, gives out the formula by which a curious yet beautifully figured piece of veneer is now being made. It is difficult to secure figured wood which can be thoroughly relied upon, but by this method a figure is artificially produced with the certainty of securing a very effective result. The process has mainly been applied to Italian walnut. An ordinary log is first cut into veneers of perhaps thirty to the inch. These veneers are then glued together and pressed into a corrugated steel mould until a solid block several inches in thickness is secured, which is of a corrugated shape. From this block veneers are then cut, so that in each leaf of the new veneer the figures and marking of some eight others are intermingled, and a sort of fine tortoise-shell figure is produced. The effect is said to be strikingly beautiful, and there is little or no evidence in the veneers of how they were produced.

## DEMAND FOR DOVE-TAILING MACHINES IN FRANCE.

THE United States Consul at Nantes, France, writes:—"One of the leading business men of Nantes informs me that certain American wood-working machines used in dove-tailing lumber for packing cases would find a market here. The gentleman was unable to give the name of the manufacturer, or the exact name of the machine, but said he saw them working in England, and that they did their work neatly and rapidly. An immense amount of lumber is constantly used here in making the cases in which small sardine boxes and packages of conserves are packed for shipment. Not only could the machine be used in Nantes in dove-tailing lumber for boxes, but also at Brest, Lorient and Concarneau, where other large sardine factories are located, and at Samur, where quantities of fine wines are packed for shipment. Thousands of cases are also used by the extensive biscuit factories of Nantes. Manufacturers wishing to place the machines on the market in this part of France will do well by corresponding with Mr. Edward Kerr, 3 rue Gresset, Nantes." Here is an opening for Canadian manufacturers of wood-working machines.

## PATENTS FOR WOOD-WORKING MACHINERY.

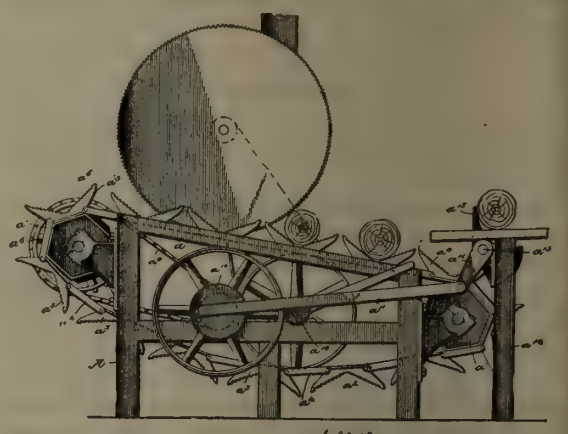
PATENTS have recently been granted in Canada for the following wood-working devices:



MACHINE FOR SAWING BARREL HOOPS.

Patentee: T. C. Seekel, Bay City, Mich., granted June 13th, 1898; 6 years.

CLAIM.—In a machine for sawing barrel hoops from poles, having a band saw with a horizontal swing table and a yielding whip roller, flexibly mounted, combination feeding and guiding mechanism, consisting of a vertical guide roller at the side of the saw and substantially on the same transverse line with the saw teeth and the axis of whip roller, together with means of rotating said roller at a speed proportional to the speed of the saw, the roller being mounted on a line with the teeth of the saw, and forming a fulcrum about which to swerve the pole in feeding.



WOOD SAWING MACHINE.

Patentee: Samuel W. Butterfield, Three Rivers, Que., granted 13th June, 1898; 6 years.

CLAIM.—In a log sawing machine, comprising a frame, drums mounted on each end of frame, a series of log carrying chains mounted on said drums, and having movement thereon, said chains being adapted to carry a log into and past the movement of a saw, and an automatic log releasing device adapted to place the logs on said chains singly. The log carrying chain comprises a series of log carrying links, and a series of connecting bars arranged alternately; a link having a V-shaped opening, and log engaging teeth extending inwardly from the sides of said opening, the chains being arranged in a manner to retain the portions of the log after being sawed.

Readers of THE LUMBERMAN who contemplate enlarging their mill, or purchasing new machinery of any kind, are asked to advise us of their requirements. Such information is greatly appreciated.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., NOVEMBER 2, 1898 No. 41.

## CANADA LUMBERMAN

PUBLISHED BY

**The G. H. Mortimer Publishing Co'y of Toronto, Limited**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the 'Canada Lumberman."*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### POSITION WANTED.

A MAN OF 32, FIFTEEN YEARS' EXPERIence in office, road and wholesale yards, wants position January 1st. BOX 75, CANADA LUMBERMAN.

### LUMBER WANTED.

WE WANT FROM ONE TO TEN CARS OF No. 1 Basswood 1 to 2 in. thick, plump 12 ft. long; from one to twelve cars of Soft Elm 1 to 3 in.; from one to twenty cars of Birch 1, 2, 2½, 3, 4 and 5 in. thick, log run; from one to fifteen cars of No. 1 straight grained Rock Maple 1 to 2 in. thick, 8, 16 or 24 ft. long. Will send man to mill to inspect lumber and pay cash for same. Address, "WHOLESALE LUMBER," P. O. Box 862, Bangor, Me.

## AUCTION SALE

# Timber Limits

THE UNDERSIGNED WILL OFFER FOR SALE BY PUBLIC AUCTION, at the Russell House in Ottawa, on

**WEDNESDAY, THE 30TH NOVEMBER, 1898,**

at 2.30 p.m., the following timber limits:

### PARCEL NO. 1.

Berths No. 388 and 389, situated on Big Lake, River Dumoine, in the Province of Quebec, containing one hundred square miles. This limit fronts on Big Lake and the River Dumoine for 20 miles and is well watered with improved creeks, making it a cheap country to work. There is a good depot and farm on the limit, and shanty rigging and provisions to the value of about $10,000, which purchaser will be required to take as per inventory, along with the limit.

### PARCEL NO. 2.

Berths No. 343, 344, 205, 233 (or Berth A) and 234 (or Berth B), situated on the River Coulonge, in the Province of Quebec, containing 245 square miles. The Coulonge River runs through these berths. They are well watered with creeks, which are nearly all improved and which render these limits easily worked. There is a good depot and farm on them, and shanty rigging and provisions to the value of about $9,000, which will have to be taken by the purchaser as per inventory.

### PARCEL NO. 3.

Part of Township of Brougham and of Township Bagot, on Madawaski River, in Province of Ontario, containing 37¼ square miles.

### PARCEL NO. 4.

Part of Townships Papineau and Cameron, on Ottawa River at Mattawa, containing 24½ square miles.

All these limits are held by the vendors under renewable licenses or leases from the Commissioner of Crown Lands for the respective provinces, upon terms and conditions mentioned and set forth in the licenses or leases or under the usual provisions set forth in the statutes, orders in council and regulations in that behalf.

The inventories of plant, live stock and supplies will be exhibited at the time of sale or at any time upon application to the vendors, and purchasers shall take such plant, live stock and supplies with respective limits at the inventory's price, subject to deduction of such articles as are consumed, lost or non-deliverable.

The depots, barns, buildings and farms on these limits are upon unsurveyed territory; the titles of which are still vested in the Crown, and the vendors will sell only such right and title thereto as they may possess, and it shall go and belong with the limits on which they are respectively situated.

Each parcel will be offered for sale separately and subject to the terms and conditions of sale, which will be made known at the time of sale.

Dated at Ottawa this 30th day of September, 1898.

W. H. LEWIS, Auctioneer.
WILLIAM MASON & SONS, Vendors.

### WANTED.

FROM 1 TO 20 CARS OF CANADIAN WHITE Pine, from 1 to 3 inches thick, square edge, undressed. Quote lowest price f.o.b. cars, Bangor rate of freight. Address, C. & T., Box 862, Bangor, Me.

### FOR SALE.

FIRST CLASS WATER POWER SAW MILL on good sized stream, convenient to G. T. R. Capacity 20 M per day. Would give purchaser contract of cutting ½ million feet or over next season. Plenty of timber available for years. Good reasons for selling. Address, Box 94, Powassan, Ont.

### WANTED.

WE WANT TO CONTRACT WITH RELIABLE parties to cut this fall and winter, and saw in dimensions as required, ready for shipment next season, from 100,000 to 1,000,000 ft. of Birch, Maple, Beech, Ash, Elm, Oak and Basswood. For full particulars, terms, etc., write to "WHOLESALE LUMBER," P O. Box 862, Bangor, Me.

### WANTED.

TO CONTRACT WITH SOME GOOD RELIable company to run saw or shingle mill by the thousand. Ten years' experience with band mills (expert band filer by trade); good general mill man from engine to saws; experienced with hard and soft wood sawing; capable and reliable. Highest references on application, from U. S. and Canadian companies. Address "HUSTLER," c/o CANADA LUMBERMAN.

### WANTED.

1STS AND 2NDS AND CLEAR STRIPS SECOND growth Hickory, 12 feet long; good, common and better Basswood, 7-inch and wider; any length Brown or Black Ash all thicknesses, common and better or 1sts and 2nds; Birch, all thicknesses, 1sts and 2nds and common, in any quantities, even car loads. Quote lowest cash price and name point of delivery. Address "HICKORY," care of CANADA LUMBERMAN.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

Unfavorable weather during the last few days of October interfered with outside building work, and caused a diminution in the consumption of lumber in country districts. In cities the requirement is largely for finishing material, as most buildings are now nearing completion. It is worthy of note, however, as showing a degree of prosperity, that even at this late season of the year, new buildings, including factories, warehouses, dwellings, etc., are being commenced in Toronto and other cities. This in a large measure accounts for the increased local demand for lumber that has been experienced this fall. Another factor is the increased activity of our industrial establishments, many of which use more or less lumber in their operations. The lumber trade of the past week has developed no new features. Some export trade is doing in pine, pine and cedar shingles are selling liberally at good prices, and hardwoods are becoming scarcer as the season advances, elm and ash receiving more attention than the other woods. These are being purchased for export, while at the same time they are wanted for local industries. It is not surprising, therefore, that the tendency of prices is to advance.

#### QUEBEC AND NEW BRUNSWICK.

A few lumber-laden vessels are yet to leave the St. Lawrence this fall, but the season will be practically over in another week. The Quebec market is by no means firm, and it is quite possible that a smaller cut of logs than usual will be made this winter. Prices have not improved, and stocks of inch lumber and three-inch deals, cut for the European market, are heavy. In some localities a very good trade is doing in cedar shingles, while of the hardwoods ash and basswood are leading. It is yet too early to speak of the export trade of 1899, although it is reported that some vessels have been chartered for first open water sailing at 43s. 9d. to England, from Montreal, Saguenay and St. Thomas. The outlook in New Brunswick and Nova Scotia, although not all that could be desired, seems to be improving. Stocks of lumber have passed out of manufacturers' hands better than was anticipated earlier in the season, and with a restricted log input this winter, which operators have apparently decided upon, there is reason to expect that the market will fully recover itself by next spring. The experience of the past year has served as a lesson to manufacturers and exporters alike, and it is hoped that a repetition of the heavy export, and consequent depression of business, will not occur again for many years to come. No shipments of any account are now being made either to Great Britain or the United States.

#### UNITED STATES.

There is a moderate movement of pine towards the Eastern States, but freight rates from Duluth and Superior are now so high that arrangements are being made for storing the lumber purchased until next spring. The winter stocks at Buffalo and Tonawanda will not be heavy, and will be well moved off before the winter is gone. At Albany there are smaller stocks than usual, and more activity in trade is reported, the chief requirement of nearly all the eastern markets being box grades. No improvement in the spruce trade can be recorded. The reports relative to the hardwood trade confirm what has already been said, that stocks are exceptionally light, and those who have any supply of elm, ash and maple are realizing good prices. Firmness also characterizes the shingle market, the holdings of wholesale dealers being almost nominal.

#### FOREIGN.

Railway work in China is creating a heavy demand for lumber and timber, to the advantage of Canadian mill owners. Some large shipments have been made from the Pacific coast, and other contracts have, it is learned, been placed. China and Japan are growing markets, worthy of the attention of Canadian exporters.

Reports from the importing centres of Great Britain tell of a sharp falling off in imports and a disposition of the market to strengthen. On the Bristol channel and in Ireland spruce is moving quite freely, and with stocks none too heavy in these districts, higher prices are looked for. St. John deals are quoted at 65s. to 67s. 6d. per standard c.i.f. The high freight rates have improved the position of holders of stock, as some charters made for this fall will be carried over until next spring. The opinion is advanced that prices will improve with the turn of the year, but in view of the heavy stocks of Canadian goods, we do not look

for any general improvement. Spruce will no doubt recover to some extent, and certain hardwoods may gain strength. Although somewhat early, we learnthat one or two contracts for next season's supply of wood goods have been placed, at prices favorable to shippers. Some charters have also been made for deals from the St. Lawrence, for f.o.w. sailing.

### STOCKS AND PRICES.

The saw mill of Messrs. Galbraith at Parry Sound, Ont., will run all winter, cutting hardwood lumber.

Cross & Ewing, of Marbleton, Que., are making arrangements for water power at Lime Ridge, for the purpose of manufacturing pulp wood.

White oak lumber from Richmond, Virginia, is being used to some extent in the construction of the new C. P. R. elevator at St. John, N.B.

Shingles are good property at Manistee, Mich. Sales of one and two million lots are common, and prices are advancing. A sale of 2,000,000 of the cedar variety, at $2.10 delivered, is noted.

The saw mill of the Holland & Emery Company at Byng Inlet, Ont., will close down about the 15th of November. They have had a very successful season, their cut amounting to about forty million feet.

Alex. Wood, of Parry Sound, Ont., has taken a contract to get out a considerable quantity of saw logs for Wm. Beatty. The Parry Sound Lumber Co. has given contracts to Richard Robinson and Wm. Argue to strip certain lots.

Albany dealers anticipate a further advance on common and box lumber before the close of navigation. Common lumber of all sorts sells freely, shippers are not plentiful, and there is comparatively little No. 2 shelving and coffin boards.

Donald Fraser & Sons, of Fredericton, N.B., have made their first shipment of box shooks to Glasgow, Scotland, and have also received and accepted an order from Liverpool for a consignment to be sent to that port as soon as practicable.

It is said that J. & T. Charlton will cut about 10,000,000 feet of logs at White Fish River, Ont., this winter, with the intention of rafting them to Michigan next season. About 6,000,000 feet of logs belonging to the same firm will be wintered over at Cheboygan, Mich.

From replies received by the Ontario Crown Lands Department, it has been estimated that the cut of logs on the Georgian Bay shore this winter will be about 500,000,000 feet. This is exclusive of the logs cut on the Indian reserve, which are under Dominion control.

During a severe storm at Chatham, N. B., recently, about 1,000,000 feet of timber broke loose from the south-west booms. The Masterman pulp mill, Hutchinson, Richards and Snowball booms also broke, allowing a large quantity of timber to get loose, some of which has been recovered.

A Vancouver, B. C., exchange says: After loading ten days at Moodyville, the eamer Ragnar went to sea this afternoon. She had on board over a million feet of assorted lumber for Russian railway work in the Orient. She is bound for Taku, China. The barque Elwell is also loading lumber at Moodyville for Oriental work.

In addition to a winter camp at Deer Bay limit, below Buckhorn, where large quantities of hardwood were cut last season, J. M. Knowlson, of Lindsay, will this winter have a second camp on a limit at Squaw river, near Little Ball Lake, recently purchased from Chas. Fairbairn.

At Buffalo an active demand for box and mill cull pine continues, and prices are firm at the advanced quotations. High grade pine is rather dull. Enquiries are numerous for low grade 18 inch shingles. This shortage cannot be met by red cedar shingles, on account of freight charges.

A Bangor, Maine, despatch says: In the past few weeks there has been an advance of about 50 cents per M. in the price of spruce lumber, and, as is usual in the fall months, the demand has increased somewhat. Freights have also recovered part of the decline of last summer, the prevailing rates being $1.62 to Boston, $1.87 to the Sound, and $2.12 to New York.

McPherson Bros. & Stout, of Greenwood, B.C., have an extensive timber contract for the Robson-Penticton railway. The contract includes the greater part of the bridge timbers and ties to be used on this new road, amounting to 5,000,000 feet of lumber and 175,000 ties. The saw mill installed some 20 miles out has nearly finished the work at the present location, and will soon be moved a few miles further to the new town of Gladstone, where it will probably be located all winter.

The statement of timber culled to October 25th, for three years past, as furnished by James Patton, Supervisor of Cullers at Quebec, is as follows:

| | 1896. | 1897. | 1898. |
|---|---|---|---|
| Waney white pine | 2,804,369 | 4,310,682 | 1,903,148 |
| White pine | 313,267 | 832,557 | 1,062,157 |

### SALE OF QUEBEC TIMBER LIMITS.

PRICES REALIZED MUCH ABOVE THE AVERAGE.

The most successful sale of Crown timber lands yet held by the province of Quebec took place on October 27th at the Department of Woods and Forests, Quebec. Mr. Blouin, Superintendent of Woods and Forests, conducted the sale. There were over one hundred persons in attendance, and at times the bidding was lively, though at others somewhat slow. Although several lots were withdrawn because the upset prices were not reached, the total amount realized by the sale was about $120,000. By far the largest purchaser was Mr. H. A. Melville, representing the Shawenegan Water Power Company. The value of his purchases amount to close upon $50,000.

The lowest upset price was $25, but in the majority of instances it was $50 and $75. Still there were others of $100, $150, $200, $225, and even one of $300 per mile, but few of them were realized. These high prices were mostly asked for limits on the Ottawa river, though the last mentioned and largest was for the Mistassini river and Sheldrake No. 1, 32¾ miles, in the Saguenay district. It was not reached. The best bidding was in the case of lot No. 4, of twelve miles in Duquesne township, West Rimouski, which started at $30 per mile and reached $140, Messrs. Price Bros. and Napoleon Adam being the rival bidders.

The official designation of the lots sold, with the number of miles in each, names of purchasers and amount paid per mile, are as follows:

ST. MAURICE AGENCY.

St. Maurice river, No. 10 east, 47 miles, J. A. Rousseau, $78.

Trenche river, No. 1 west, 24 miles; Trenche river, No. 2 west, 50 miles; Trenche river, No. 2 east, 40 miles, all to H. A. Melville, at $76.

Mattawin river, No. 10, 48 miles, H. T. Melville, $101.

Rear River du Milieu, 29 miles, H. A. Melville, $106.

Rear St. Maurice, 13 west, 25 miles; rear St. Maurice, 14 west, 40 miles; rear St. Maurice, 15 west, 50 miles; St. Maurice, 13 west, 50 miles; St. Maurice, 14 west, 50 miles; Bostonnais, 4 north, 25 miles; Bostonnais, 4 south, 50 miles; Bostonnais, 2 south, 50 miles; Bostonnais, 3 south, 50 miles, all to H. A. Melville at $51.

Croche, 4 west, 50 miles; rear Croche, 4 east, 50 miles; rear Croche A, 40 miles; rear Croche B, 50 miles, all to H. A. Melville at $76.

OTTAWA RIVER.

Lot No. 595, 32 miles; Jos. Bourque, $128.
No. 607, 22 miles; Jos. Bourque, $125.25.
No. 608, 26 miles; Jos. Riopel, $151.
No. 609, 11 miles; Jos. Riopel, $155.

LE PECHE RIVER.

No. 525, 16½ miles, R. J. Davidson, at $53. No. 524, 11¼ miles, Mr. Davidson, $27.

LOWER OTTAWA.

River Rouge, South L, 43 miles, and River Rouge, South M, 42 miles, both to E. B. Eddy, $102.

Wentworth Township, No. 3, 6¾ miles, Mr. E. T. Porcheron at $1.53.

UPPER OTTAWA.

Block A, Range 4, north half, 25 miles, Jos. Bourque, $50.25.

South half, No. 8, 25 miles, Jos. Bourque, $62.

MONTMAGNY.

Rolotte and Roux Townships, Moose River, 37 miles, Price Bros., 66.

Lafontaine Township, 17⅓ miles, Napoleon Adam, $29.

Roux Township, 7¾ miles, H. Atkinson, $78.

Mailloux Township, 13¼ miles, Price Bros. & Co., $77.

Ashburton Township, 3⅓ miles, Napoleon Adam, $62.

Talon Township, 3¼ miles, Mr. Kilburn, $90.

GRANDVILLE AGENCY.

Armand Township, No. 2, 10 miles, Chas. Macdonald, $50.25.

Armand No. 2, 13 miles, Chas. Macdonald, $50.25.

Escourt Township, No. 3, 8⅝ miles, C. Macdonald, $50.25.

Parke No. 2, 9 miles, Geo. St. Pierre at $54.

Parke No. 3, 21 miles, Alexis Belanger, $51.

METAPEDIA.

Amantjish Township, No. 2, 18½ miles, Mr. Fenderson, $76.

EAST RIMOUSKI.

McNider No. 3, 7½ miles, Thos. Lebel, $31.

WEST RIMOUSKI.

Doquesne No. 3, 8 miles, Price Bros., $460.

Duquesne No. 4, 12 miles, Price Bros., $140.

Rimouski River, centre east, 10 miles, Price Bros., $75.25.

Rimouski River, centre west, 32 miles, Elz. Talbot, $138.

Lake Temiscouata, 3rd Range, Block 1, 26 miles; Block 2, 26 miles; and Block 3, 33 miles; all to C. Macdonald at $80.25.

Rear Rimouski River, No. 2, west, 18 miles, Price Bros. & Co., $100.

Macpes Township, 6 miles, Price Bros., $79.

WEST BONAVENTURE.

Meadow Brook (Patapedia River), 30 miles, Mr. Moffatt, $26.

ST. CHARLES.

141 West, 20 miles, William Power, $30 per mile.

143, 18 miles, Price Bros., $41.

SAGUENAY.

River Manicouagan, No. 2 west, 40 miles, J. B. Renaud & Co., $35.25.

River Manicouagan, No. 5, 56 miles, J. B. Renaud & Co., $115.25.

Malbaie River, No. 1, 27 miles, Bazile Neron, $26.

St. John River, No. 1, 24 miles; No. 2, 24 miles; No. 3, 23 miles, and No. 4, 18 miles, all to H. M. Price at $25.25.

Laval Township, 1 mile, Chas. Belanger, $51.

NORTH OF LAKE ST. JOHN.

First Range, lots No. 4, 26¼ miles; No. 5, 26¼ miles; No. 6, 38¾ miles. Second range, lots No. 1, 17 miles; No. 6, 36½ miles; and 3rd range, lot No. 1, 17 miles; all to B. A. Scott at $25.25.

Lot No. 7, 26¼ miles and lot No. 8, 18¾ miles, to D. R. McLeod at $30.25.

### SHIPPING MATTERS.

The ship Coringa has been chartered to load lumber at Yarmouth, N.S., for Buenos Ayres, at $8.50. The bark Lovisa will load at Tusket, N.S., for same port at $8.75.

Freights from St. John, N.B., rule about as follows: To New York, $2 to $2.25; Boston, $1.75; South Port, $2; W. C. England, 42s. 6d. to 45s.; Barbados, $5; Buenos Ayres, $11.50; Rosario, $12.50.

A deputation from the Montreal Board of Trade recently conferred with the managers of the Grand Trunk and Canadian Pacific Railways with respect to the extension of the term of summer freight rates from the 15th to the 30th of November. The companies absolutely refused to grant the request.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Rail way are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft ,(3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $3.00 per M; under 50 M feet, $3.25 per M; from Arnprior, lots over 50 M feet, $3.50; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 55 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 65 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage) Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 11c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 13 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, rom Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R, writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct, Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M few and over, $2.50; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 50c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $2.75; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 55c. per M pieces, under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3.00; under 50 M feet, $3.75; hardwood, 50 M feet and over. $4.50; under 50 M feet, $4.75; lath, 250 M pieces, 60c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.25; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 65c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.: lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 10c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

# USEFUL INFORMATION

No boiler will give good results unless the circulation is free and rapid. To overcome the difficulty experienced with some kinds, where there is no circulation in some parts of them, ejectors have been used to take the water out of the dead spaces and discharge it into other parts where the water is always in motion so long as there is any fire in the furnace.

Loose crank pins, and how to make them tight, is an interesting theme, and frequently comes up for discussion among engineers. One of the best remedies that I have heard of is to bore holes partly in the pin and partly in the boss of the crank, the holes being parallel to the axis of the pin, then driving in iron bolts that are a perfect fit and rivetting them solidly in place.

INSPECTING BELT LACING.—A good practice is to draw in extra pieces of lacing over the regular strips, and then have a board in close proximity to the belt as it runs. The result is that the outside pieces, which are not intended to hold any of the stress, catch all of the wear, and as soon as a piece is worn in two the centrifugal force due to its motion causes it to strike the board and attract attention. It is not at all necessary to shut down when this warning note is heard, for no one will know it to be but the outer part, but it should be attended to the next time that the engine is shut down. The adoption of this plan will save delays in many places where they are now considered a necessary evil.

BOILER CLEANERS.—A correspondent of the Scientific Machinist, on the advice of a brother engineer, took a good sized stick of cordwood (oak), put it in the boiler and screwed it to the brace so that it could not get fast between the flue and the shell when the water was low. After a week's run he found a great deal of scale had come off the sides, and a lot more was loose that was easily knocked off. At the end of the third week the scale was loose on the flues and easily knocked off. By continuing to use oak wood and to clean out once a week, in a remarkably short time he had the boiler free from scale. The difference in firing alone was no small matter. It is best, he says, to clean every week when using the wood, as it does not reduce the scale to a mud. Blowing off causes it to gather around the blow-off, which, if left too long, is apt to burn the shell, owing to its keeping the water from the shell.

OLIVE OIL.—There is no question but olive is the best oil to be used for many purposes in both mill and shop; its advantages over other kinds are that it softens, and even after a year or more does not become stiff and hard, and the oil remains fresh and sweet in it. It is very difficult to detect adulteration in oil, and as olive oil is mixed to a large extent with cotton seed oil, it behooves the purchaser to be very careful what he is doing, or some smart "drummer" will sell him a few barrels of cotton-seed oil with a little olive mixed in for the best pure olive oil. The following is a good test for oil: Take a portion of the oil and stir it up with forty parts of a solution of carbonate of soda of three degrees of Baume. If the oil forms a milky emulsion, without any oil drops on the surface, it is a guarantee for a good greasing of the object to which it is applied.

It would be a wise precaution for every mill owner to insist on his foreman posting himself on the laws relating to accidents. There are some plain decisions that have been rendered by the courts which can readily be obtained. A little knowledge sometimes might save a man's life and a big expense bill. For instance, the supreme court of Louisiana recently held "that it is negligence for the foreman of a steam saw mill to call on one of the employees suddenly and on the spur of the moment to take a position in the mill that is dangerous without giving him any instructions or explanation whatever of the movements of the machinery or the risk and hazard of the employment, of which the employee had no previous knowledge." A careful foreman who knew this to be the law would see that the interests of his employer were cared for and the safety of the employee guarded by advice.

TO TELL WHEN TIMBER WAS CUT.—A current item says that timber cut in summer represents a lower value than that felled in winter, and it is of great importance to buyers to know when a trunk was hewed. Timber hewed during the resting period—i.e., between October and April—contains in its cells numerous starch particles which cannot be found in wood cut down in summer. This starch closes the pores, and the wood becomes coarse and impenetrable. This is the reason that winter-hewed timber is exclusively employed for staves. Made with staves from summer-hewed wood, the barrels leak and the contents may evaporate through the pores. A sure test is the use of iodine, which gives the starch in the winter wood a violet color. If the timber to be examined is coated with an iodine solution, and the surface of the felling side shows yellow, it may be taken as a certainty that the tree was cut down in summer. The light yellow lines are the moisture rays, while cells, tissue and wood fibres simply take on a yellow coloring. In winter-hewed timber the amylaceous rays form much darker, ink-colored, black stripes on the yellow ground.

POWER CONSUMED BY WOOD-WORKING MACHINERY.—Prof. O. G. Dodge, U.S.N., who was chief electrical inspector at the World's Fair, recently made some careful tests to determine the power required to drive wood-working machinery at the navy yard in Washington. With a circular rip saw 28 inches in diameter and running at 1,200 revolutions per minute (or 8,800 lineal feet per minute), and ripping seasoned hard oak 7⅝ inches thick, with a feed of 10 feet a minute, 18.8 mechanical horse power was used. The motor and saw running idle absorbed 2.1 horse power. In other tests with rip saws of 24, 14 and 12 inches diameter, and at varying speeds of from 1,500 to 2,000 revolutions per minute, the mechanical horse power output ranged from 2.6 to 8.9 horse power. A band saw running at 160 revolutions per minute (or 3,017 lineal feet per minute) required 10.4 mechanical horse power when the motor was running idle. When ripping seasoned ash 10¾ inches thick, with a feed of 6 feet per minute, but 14.8 horse power was consumed. In ripping yellow pine 12 inches thick and running 20 feet per minute, 17.6 horse power was consumed. The above figures are in contrast with the work done by a band saw having a pulley 28 inches in diameter and running at 480 revolutions a minute. With a belt pulley 12 inches in diameter and 3½ inches face, and with the motor belted to the saw shaft, the motor consumed nine-tenths horse power when running idle, and but 1.3 horse power when ripping seasoned oak 3 inches thick, and with a speed in one case of 2½ feet per minute, and in the other cases of 4 feet per minute, the difference in speed apparently making no difference in the consumption of power.

THE AMERICAN BOARD RULE.—The American board rule is founded upon the principle that a foot of lumber is one inch thick and 12 inches square, and that this is composed of 12 pieces one inch wide and 12 inches long. In a 12 foot board it takes a strip one inch wide the whole length of the piece to make a foot of lumber; in a 14 foot board it takes a strip the whole length of the board only $\frac{12}{14}$ of an inch wide, and if 16 feet long only $\frac{12}{16}$ of an inch wide, and by the same theory an inch in width in a 12 foot board, as has been stated, makes one foot of lumber; a strip an inch wide in a 14 foot board makes $\frac{14}{12}$ feet or one foot and $\frac{2}{12}$, or $\frac{1}{6}$ of a foot over. But as the figures on the board rule represent the number of feet in a board whose width corresponds with those figures, it must be seen that in a 12 inch board, as has already been stated, it takes an inch in width to make one foot, hence the figures in the 12 foot run are all exactly one inch apart on the length of the rule; but in a 14 foot board it requires only $\frac{12}{14}$ or $\frac{6}{7}$ of an inch in width to make a foot of lumber, hence in the 14 foot run the figures on the rule are placed $\frac{6}{7}$ of an inch apart. In a 16 foot board it requires only $\frac{12}{16}$ or ¾ of an inch in width to make a foot, hence in the 16 foot run the figures are only ¾ of an inch apart. The same rule holds good in all lengths over 12 feet, but in lengths under 12 feet the rule is reversed, the spaces being wider between the figures. For instance, if the board is only 10 feet long it will require $\frac{12}{10}$ or $1\frac{1}{5}$ inches in width to make one board foot, hence in the 10 foot run the figures are $1\frac{1}{5}$ inches apart. In the 11 foot run they must be $1\frac{1}{11}$ inches apart.—O. S. Whitmore, in Dixie.

No matter in what part of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publishers of this journal.

The lumber journal of Sweden is called the "Svensk Travarutidning." It contains a great deal of valuable timbereskine and statististical lumbertolsons. It wants to be read out loud to be appreciated, quotes a contemporary.

## A TWISTED BAND SAW.

THE engraving herewith is from a kodak picture of a band resaw six inches wide by 32 feet long, 18-gauge thick. This saw was doing first-class work and had no cracks in it, writes A. J. Burton, in the Wood-Worker. The sawyer was called away one day very suddenly, and the manager was obliged to put on a man of less experience in his place.

Things went along nicely till they were obliged to change saws; then the trouble commenced. The first saw the new man put on was not placed on both wheels alike. It was about one inch off the top wheel and about two inches on the lower wheel, so that when he first started up, the saw oscillated so much that the teeth hit the husk or bed iron, and knocked all the points off the teeth half way round the saw, which had to be taken off and refitted.

The next saw he run about 20 minutes. Up he came to the filing room and asked me to come down and look at the saw, which was "notching" the boards, as he called it. And no doubt it was, for by the time I got to it the saw was nearly red hot and would hardly stay on the wheels, to say nothing of sawing lumber with it. I did not stay long, for I saw it was all day with that saw. I told him to take it off.

A TWISTED BAND SAW.

As soon as released from the wheels, it twisted and coiled up as shown in the engraving, but not before it presented the men handling it with several cuts and wounds, so much so that one of the men was obliged to go to the doctor to get his wounds dressed.

The whole trouble was that a sliver got in between the guide and the saw and caused it to heat, and the sawyer, not knowing what was the trouble, kept on sawing. Soon as the saw got so hot that it could no longer stand up and cut, it dished or turned over and run clear out of a three-inch plank, and this caused the saw to twist as you see.

One trouble after another continued for a week, till the regular sawyer returned. By this time the new man had moved nearly every part of the machine, so the whole thing had to be re-adjusted. After the regular sawyer got the mill properly adjusted, everything run perfectly and the saws did not "notch" the boards, as the new man termed it. My advice to mill men is to always try to secure a good, experienced man to operate these machines, for "the best are the cheapest."

Messrs. Herman, Noss & Sons, York, Pa., in remitting their subscription to THE LUMBERMAN, write: "We look for THE LUMBERMAN weekly and profit thereby. Wishing you success."

# THE NEWS.

—Mr. Contine has purchased a saw mill at Bayfield, Ont.

—J. Smith, of Hall Landing, Ont., purposes rebuilding his saw mill.

—J. W. Templeman is enlarging his broom handle factory at Burk's Falls, Ont.

—An agent of one of the steamship companies at Montreal has received enquiries for prices on barrel heads and casks for export to Spain.

—Tenders are called for the purchase of the plant and premises of the W. R. Gardner Tool Co., Limited, Sherbrooke, Que., in liquidation.

—W. Craddocks, of Huntsville, Ont., has increased his plant for turning out saw handles, baseball bats and other woodworking specialties.

—The town of Peterboro', Ont., has granted a bonus of $30,000 to the Wm. Hamilton Manufacturing Company, to assist them in extending their works.

—Elrick Sedvall has given particulars to the city council of Winnipeg, Man., of a match factory to be erected in that city by a Swedish syndicate. It will employ fifty hands.

—James Gillies, of Carleton place, John Gillies, of Braeside, and other lumbermen, have been incorporated as the Lake Temiscamingue Navigation Company, with a capital of $25,000.

—Long & Thompson, of Orillia, Ont., are filling a large order for the English syndicate which has undertaken the work of carrying to completion the big pulp and paper enterprise at Sturgeon Falls.

—Mr. Allcroft, of the firm of Dent, Allcroft & Co., glove manufacturers, London, Eng., and Mr. Davey, have been in New Brunswick recently relative to securing a supply of lumber for boxes and cases for their extensive glove shipments.

—Geo. F. Roy & Sons, of Sprucedale, Ont., have bought from the John Abell Co., Toronto, their saw and shingle mill at Starrat. They have now one thousand acres of timber land, and will commence cutting on a contract of 300,000 feet of hardwood.

—J. A. Craig, of Shanghai, China, a former Canadian boy, is at present in this country, for the purpose of working up a trade between Canada and China. He states that there is a good market in the latter country for lumber, and while here he will arrange for some trial shipments.

—Minneapolis sash and door manufacturers who are seeking trade in Manitoba find that the new sash and door factory of the Rat Portage Lumber Company, at Rat Portage, Ont., is a strong competitor. This plant is just completed and is more nearly modern than any such plant in northwestern Canada.

—Price Brothers, of Quebec, have purchased ground at Batiscan, Que., for the erection of a saw mill, to which will be transferred their present plant at St. Stanislas. The mill will be equipped with the latest modern improvements, lighted by electricity, and with a capacity for sawing 200,000 logs per season.

—A delegation of Ottawa lumbermen waited on Sir Wilfred Laurier, Sir Richard Cartwright and Sir Louis Davies recently. It comprised Messrs. J. R. Booth, W. C. Edwards, M.P., A. Lumsden, M.P.P., and Levi Crannell. The position of the lumbermen of Ontario was discussed, during which some doubt was expressed as to the wisdom of the manufacturing clause.

—The saw mill on the C. P. R. at Biscotasing, Ont., formerly owned by Simpson & O'Neil, of Lindsay, but operated for the past couple of years by Thos. Sadler & Company, was closed down last month, the limit having become completely exhausted. A large stock of old lumber on hand has been disposed of to the C.P.R., and shipping has been going on steadily all summer. This year's cut of lumber—about 4,000,000 feet—is still in the yard, but a very large quantity of bridge timber was cut and sold to the C.P.R. and the Copper Cliff Mining Co. at Sudbury. At present there is a prospect of disposing of the mill at Biscotasing to an American firm, who, if they purchase, will remove it to a limit near Sudbury. Several offers have been made for the lumber on hand, but Messrs. Sadler & Co. have decided to hold till next season, believing that prices will advance.

—A case known as Creighton vs. Pacific Coast Lumber Company was heard in Winnipeg last month. The plaintiff is a lumber merchant in Winnipeg and defendants carried on business in New Westminster. In March last defendants agreed to sell to plaintiff a carload of clean cedar strips of second grade or better; a carload was shipped and defendants drew on plaintiff for the amount due, plaintiff paid the draft and also paid the C.P.R. $120 for freight. When the lumber was unloaded plaintiff claimed that none of it was of the grade agreed to be sold to him by defendants, and he refused to accept same, and notified the defendant company that it was held subject to their order. Plaintiff claimed that because the lumber delivered was not of the character ordered he was entitled to refuse acceptance thereof and to be repaid the sums paid by him. Defendants alleged that the plaintiff examined and inspected the lumber before completing the purchase and satisfied himself as to the quality thereof. They denied that there was any express or implied warranty on their part and that the plaintiff had any claim against them. Judgment was reserved.

## CASUALTIES.

—Joseph Sawyer, of Hintonburg, Ont., was drowned while booming logs on the Madawaska river for McLachlin Bros.

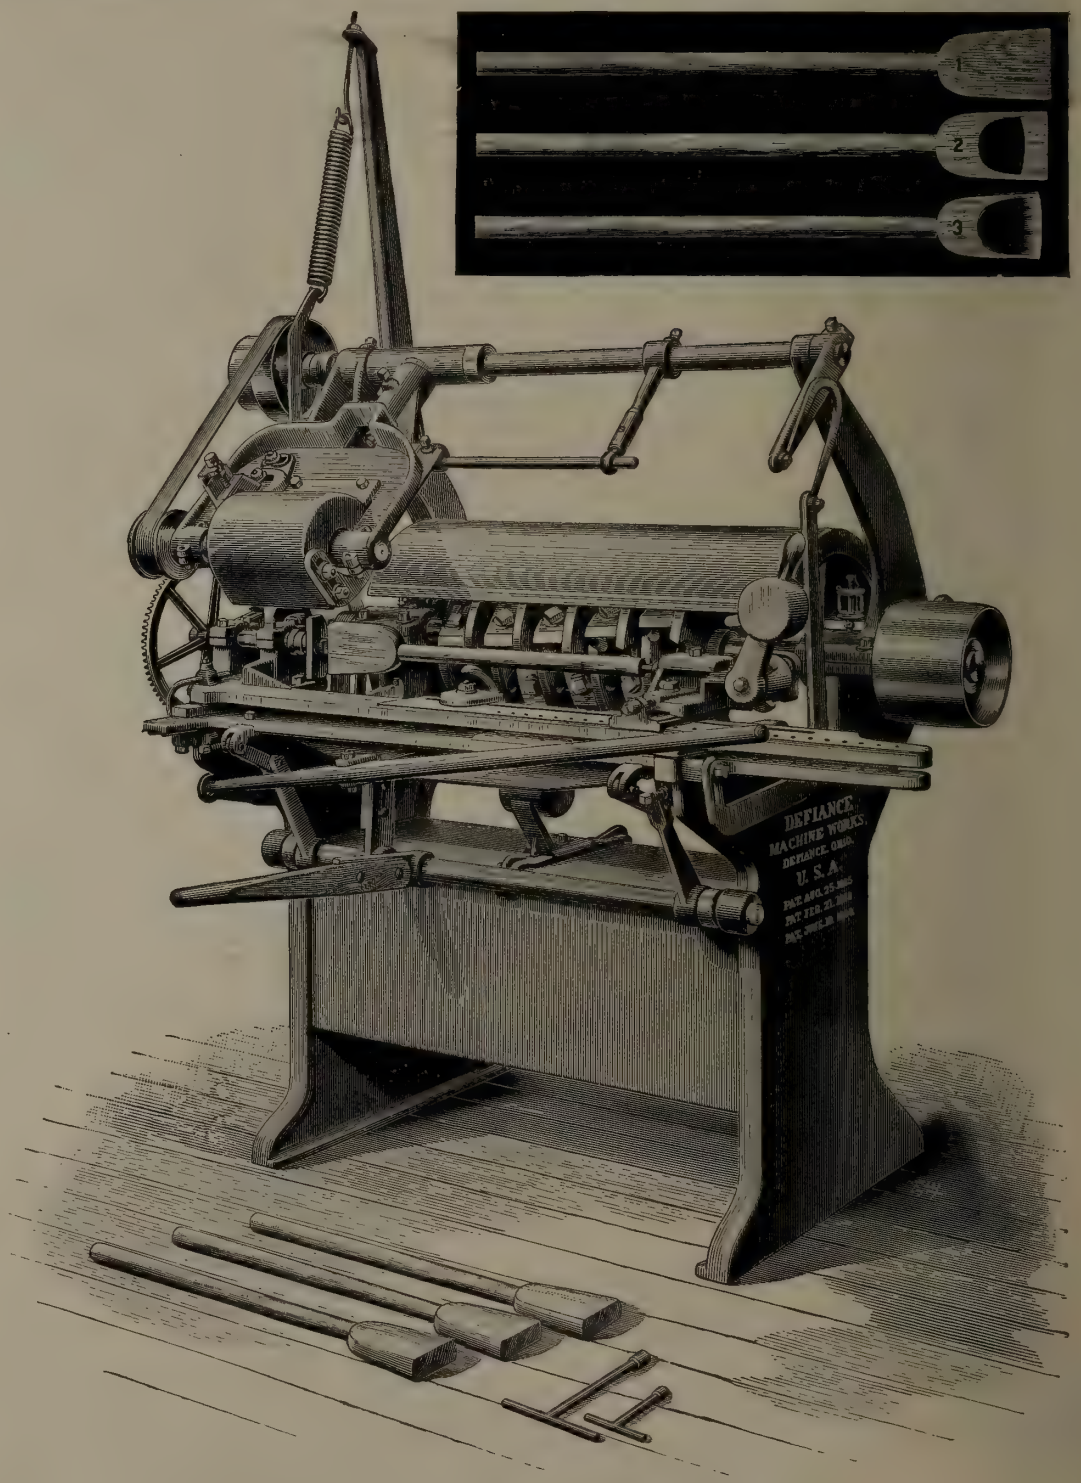
—Paul C. Kaiser was killed in Tait's logging camp opposite Borven Island, B.C., by being struck by a log passing down a chute.

—Charles Brown, a son of the night watchman at J. A. Morrison's shingle mill at Fredericton, N.B., was seriously injured by falling under a moving loaded car.

—A sad accident occurred at Conroy's Mills, at Deschenes, Que., whereby Richard Baulke, an employee, met a sudden death. Baulke was employed at a saw used in cutting slabs, and was in the act of pushing a board up to the revolving saw when a large splinter flew off and struck him in the lower part of the abdomen, inflicting such injuries that he died in a few hours.

## PATENT AUTOMATIC HANDLE LATHE.

THE accompanying engraving represents a patent automatic lathe especially designed for turning D handles for shovels, spades and forks, the manufacturers being the Defiance Machine Works, of Defiance, Ohio. The lathe is so constructed that the rough material is placed into the machine and the turning and dressing of the flat end of the handle are accomplished at one and the same time. The work is accomplished at the rate of 2,000 handles per day.



NO. 1 PATENT AUTOMATIC D HANDLE.

In a circular descriptive of the machine the manufacturers say:

Its advantages are very great over other machines intended for the same purpose. Turning and dressing the handle at the same operation effects a saving of several machines and operators, and the work is performed more accurately, as the handle end is always true with the stem or round portion of the handle. A uniform true and smooth product is guaranteed. The frame is heavy and substantial, overcoming all tendency to twist or spring, securing an easy uncramped movement to the working parts. The cutterheads are of large diameter and fitted to a 2¼" steel spindle. They are locked to it by a friction grip, no set-screws touching the shaft to mar it. Each head is fitted with three shear-cutting knives, and a sufficient number of heads are used to cover the longest handle to be turned, forming a continuous cut over the full length of handle. Different lengths of handles can be made by simply adjusting the tail stock horizontally on the table. It is also provided with a right-angular adjustment to turn the handle parallel or to any taper. The table carrying the centres which support the material to be turned slides to and from the cutters by a convenient hand-lever, and when moved up to the cutters to a point where the turning shall begin, the handle blank is slowly rotated until finished. At the same time, the swinging cutterhead for dressing the flat sides of the handle automatically comes down and completes its work. The table is then moved back toward the operator, which movement automatically lifts the swinging cutterhead up out of the way, and stops the feed for the removal of the finished handle and the reception of another blank. The swinging cutterhead rides upon a cast-iron cam when doing its work. The shape of this cam governs the shape of the turning, and it can be easily shaped with a file to suit any shape of handle, making one side of the flat portion of the handle straight, the other convex or concave, or making both sides alike and to any taper lengthwise.

Handle No. 1 shows the product as it is taken from the machine; No. 2, after having been punched by a special machine for that purpose; No. 3, a finished handle after being chamfered and the hand-hold rounded, which is also accomplished by special machines which we build for that purpose. The several operations necessary in D handle making are very simple by our machines, and do not require expensive skilled labor.

The counter for this machine is furnished as follows: Shaft, $2\frac{3}{16}$" x 6' long; two No. 2 ball-and-socket adjustable hangers; driving pulley, 30" x 6", for main cylinder; driving pulley, 18" x 2½", for swinging cutterhead; tight and loose pulleys, 14" x 6", speed 600 rotations per minute.

# WOOD PULP DEPARTMENT

## SCANDINAVIA VS. CANADA.

FROM the report of the annual meeting of the Scandinavian Chemical Pulp Union, it will be seen that the sulphite pulp manufacturers are becoming alive to the fact that they have a very powerful rival to meet in Canada, and have decided to send a representative to the United States and Canada, to find out what they will have to fear from the new sulphite mills now building or projected in those countries. There is no doubt they will find Canada a very hard nut to crack, for the maritime provinces have already proved that they can compete profitably in this market, while many of the new mills are backed by British paper-makers' capital, and can count on being supported by the paper-makers represented. Among these latter we may mention the St. John Sulphite Co., the capital of which has been furnished almost exclusively by Scotch paper-makers ; the Dominion Pulp Co., an English company, with one of the largest English paper-makers at its head ; the Cushing Sulphite Co., two-thirds of the capital of which has been guaranteed by another well-known English paper-maker. English capital has also been invested in other well-known concerns. It was at one time thought that the competition in sulphite pulp this year would be very severe, owing to the large number of new mills projected in Scandinavia, but as ready pointed out in our market reports, several of these have been built with a smaller capacity than originally intended, while other schemes have been held in abeyance in the meantime, so that the prospects for the new Canadian mills are not so dark as they might have been. The great drawback to the Canadian makers at present is the heavy freight on pulp, and when this is remedied, as it is sure to be by-and-by, as the industry develops, they will compete on pretty equal terms with Scandinavia. For, although in the latter country labor is cheaper and the market nearer at hand, Canada has the advantage of cheap wood of excellent quality, and in practically unlimited quantities. There have been many rumors lately that Scandinavian pulp-makers will put in paper machines if the Canadian competition in pulp becomes severe, but we think this would be a mistake, as they cannot afford to adopt the same tactics as United States paper-makers, who find it profitable to dump their surplus here at a loss rather than spoil their own market, for the Scandinavians have practically no market of their own to speak of. Victory is generally on the side of the biggest battalions, and the result of the struggle for the wood-pulp trade will doubtless be in favor of the country which has the most natural advantages for its production.—Paper and Pulp, London, Eng.

At the new pulp mill at Mispec, near St. John, N. B., 150 men are still employed in building operations. It is expected that it will be ready to open about the middle of January or the first of February. Mr. B. Mooney is local manager.

## NEW USE FOR WOOD PULP.

A CONTEMPORARY, Invention, states that a composition is made by Brandon & Sons which is intended to take the place of both leather and India rubber. This is as it may be, but the process may be described in the meantime. While one set of workmen is mixing ordinary "India rubber solution," preferably containing a little sulphur, with dry powdered chalk, another set is drying and breaking up ordinary sulphate pulp. The pulp is then mixed with the India rubber mixture. The whole mass is then made into a sheet and exposed to a temperature of from ninety-three to 107 deg. C. The object of the chalk is to enable this heating to be made moderate. If chalk is not used a higher temperature must be employed to make the India rubber combine firmly with the pulp, and this higher temperature much diminishes the durability of the India rubber, and causes the resulting composition, although answering as well at first as that made with chalk, to rapidly disintegrate when exposed to the weather, and especially to the sun.

The volatile matters present having been evaporated, the leaf is passed between rollers to compact it, as it is left in a somewhat porous and spongy state. A little soot or lampblack should be added to the chalk before incorporating that with the other ingredients.

The following are the recipes used :

| | Lbs. |
|---|---|
| A. For India rubber : | |
| Dry sulphate pulp | 100 |
| India rubber solution | 50 |
| Chalk | 50 |
| Lampblack | 5 |
| Sulphur | 5 |
| B. For leather : | |
| Dry sulphate pulp | 120 |
| India rubber solution | 40 |
| Chalk | 30 |
| Lampblack | 5 |
| Sulphur | 5 |

## EXTENSIVE PULP AND PAPER MILLS.

A few years ago there was erected at Sturgeon Falls, Ont., a comparatively small pulp mill, but owing to limited capital, the venture was not a success. Recently a British syndicate, known as the Occidental, and represented by Mr. Ernest A. Bremner, of London, Eng., secured control of the property, and cast about to see how the business could be enlarged. After negotiating for several months, an agreement was reached with the Ontario government for the acquisition by the syndicate of seventy-five square miles of spruce limits along the Sturgeon river, and as a result extensive pulp and paper mills are to be established. The company agrees (1) to take up the property of the Sturgeon Falls Pulp Company and carry out and extend the objects of the original company ; (2) to expend one million dollars in erecting paper mills, pulp mills, machinery, plant, etc., and utilizing the water power at Sturgeon Falls ; (3) at least 240 hands will be employed, and at least 30,000 tons of paper turned out every year ; $250,000 of the one million dollars must be expended in the first eighteen months, $500,000 within two years, and the whole sum within three years.

By way of encouraging the establishment of the enterprise, the government set apart for the use of the company the spruce and jack pine on 75 miles of limits on the Sturgeon river and its tributaries. For all pulp timber taken from these limits the company is bound to pay the government the usual dues, which are at present twenty cents a cord, but this rate may be increased from time to time at the discretion of the Lieutenant-Governor-in-council during the period of 21 years covered by the agreement. The company acquires no title to the land or pine timber thereon covered by the concession, nor is the land withdrawn from settlement.

Complaint has been made that the concessions given to the Sturgeon Falls syndicate by the government are too liberal, and that the result will be to give the concern a great advantage over enterprises less favorably treated. In reply to this, it has been pointed out that the agreement with the Sault Ste. Marie Company served as a model for this one, although in one or two respects the former is more rigorous. For example, the dues of twenty cents a cord, which are also imposed on the Sault Ste. Marie Company, are in its case unalterable for twenty-one years. In the case of the Sturgeon Falls Company they may be increased whenever it is thought fair to do so, the general prevailing rates for such a privilege being the guide. Concerning the matter the Toronto Globe says: It should be observed that before making the concessions in question the government insisted that the company should undertake not merely the manufacture of pulp, but the more finished product, the manufacture of paper. The company is under obligation to employ at least 240 men about the mills, but the employment of this number at the mills necessitates a considerable volume of work in the woods and on the rivers. This will afford employment for settlers in the winter, a great desideratum in new districts where the poorer settlers must find cash jobs to carry them over the lean years that every settler experiences while he is making his clearing. The agreement carefully provides that the logs taken shall be made into pulp and paper, and not exported as logs. It is, indeed, a beginning in Ontario of an industry that may become one of its greatest sources of wealth and employment.

The Occidental syndicate includes such men as Harold Gilmour Campion, son of Admiral Campion ; H. G. Sinclair, of Tilley & Henderson, London, Glasgow and Belfast ; H. Graham Lloyd, of B. S. Lloyd & Co., Maures Horner, director of the State Insurance Co., and of Richardson & Co., the big New Zealand wool house. Mr. Wm. J. Findlay, of Lawrence, Mass., has been appointed manager.

## PULP NOTES.

The town of Woodstock, N.B., has decided to engage an expert to report on the outlook for establishing a pulp mill in the vicinity.

Mr. W. C. Edwards, M.P., of New Edinburgh, Ont., is reported to be investigating the outlook for a pulp mill in the vicinity of Ottawa.

An exchange states that some Ontario and English capitalists have an option on a site across the river from Campbellton, on the Quebec side, where it is said they contemplate erecting large pulp mills.

Mr. A. E. French, of Sundridge, Ont., has shipped the second consignment of balsam to be used for pulp. It will be a great boon to the farmers in Ontario if the balsam wood which is now being tried as an experiment will work satisfactorily in the manufacture of pulp.

The Scandinavian Chemical Pulp Association, at a recent meeting, decided to send Engineer Karl Everitt, of the Aras Sulphite Mill, to Canada and the United States to find out what competition the Scandinavian makers were likely to have to meet in the near future, and the probable effect on the market of the newly erected sulphite mills in those countries.

Mr. George Lake, of Glossop, England, who was commissioned by Captain Partington, of Liverpool, Eng., to report on the prospects for the proposed Cushing pulp mill at St. John, N.B., has been in Canada for the past month. He expresses himself as favorably impressed with the facilities at St. John for the manufacture of pulp, and it is believed that he will advise Captain Partington to invest in the undertaking.

The Parrsboro, N.S., Leader, says : The report of Mr. T. R. Allison on the adaptability of Parrsboro as a pulp centre, came to hand last Monday evening. The report, though not lengthy, is an endorsation of all the facts stated in the prospectus. Parrsboro, it states, is in a position to compete with the world in the manufacture of pulp, having cheap coal, good shipping facilities, plenty of raw material and lots of water. These and other points are touched on, and coming from a man who has had much practical experience in the pulp business, should have weight sufficient to interest capitalists.

Mr. F. X. Gosselin, of Quebec, has been appointed crown timber agent in the Yukon district, at a salary of $1,800 per year.

Mr. Emile Stehelin, of New France, N.S., has ordered another locomotive for his pole railway. It was purchased from the Robb Engineering Company, of Amherst, N.S.

The new pork-packing establishment of the Park-Blackwell Co., Limited, Toronto, is nearing completion. The building is a commodious structure of four stories, and is being equipped with latest up-to-date machinery and appliances, and is situated conveniently to the hog and cattle markets. The company anticipate requiring about three thousand hogs and one hundred head of cattle weekly. This enterprising company contemplate entering the export trade, in addition to giving attention to their large and growing home trade. We draw attention to their advertisement which appears in this month's issue of the CANADA LUMBERMAN.

## THE ST. MAURICE LUMBER COMPANY.

SINCE the publication of our October issue, in which there appeared illustrations of the St. Maurice Lumber Company's mill at Three Rivers, Que., the following particulars have been received: The mill is 150 x 54 feet, and has two floors. The first, or lower floor, contains all the shafting and pulleys to drive the machinery, which is placed on the second floor. This floor is extended after the edgers to receive the transfer chain for the slash table and trimmer table. It is a double mill, having two No. 3 Allis band mills, with the necessary log carriages, steam feeds, live rolls and edgers. The logs enter the mill in the centre, where an endless heavy log haul-up is placed, and are delivered on to log rolls and placed on to the log skids by a double deck kicker, each provided with two arms and heavy steam cylinders. The logs are delivered from the skidway on to the carriage by steam log loaders and turned into position by steam niggers. The carriages open 40", and consist of heavy cast iron log seats, provided with Allis set works and automatic receding rig and offset. They are actuated by powerful 10" gunshot steam feed. The boards drop on to live rolls and are transferred by a transfer chain to the edger table. After passing the edger, the boards are sent to the end of the mill, where they are dropped on to a transfer running across the mill, bringing the boards to the trimmer. The edgings are dropped by the man behind the edger on to the slash table transfer. This transfer is built into the floor, and delivers edgings and small slabs on the slash table, carrying them under a mandrel with five cross-cut saws of 36" diameter. To resaw the heavier slabs, each side of the mill is provided with a circular re-saw. The slabs drop on to the live rolls, and are handled by a steam flipper on to the rolls feeding the re-saw, from whence the boards are transferred to the edger, and the remaining slabs on to the transfer to slab slasher.

The engines and boilers are situated on the south side of the mill. The saw-dust from each machine is collected and carried over the boilers into the furnace, which burns all the sawdust, making ample steam for the mill. Each of the boilers is provided with a Dutch oven. All refuse stuff, too small to work up, is carried by the refuse conveyor to the burner, which is situated south of the boiler room. All slabs passing over the slash table are cut into four foot lengths, dropping into a conveyor. As they pass along in this conveyor, the best pieces are taken out and prepared for pulp by being barked on Waterous barkers, of which there are four in an adjoining building next to the slash table. This is a new departure in preparing pulp-wood, as formerly no slabs were used for this purpose, all going to the burner. All the refuse slabs in this mill are barked and converted afterwards into pulp in their pulp mills. The roof above the band mill is raised, making a large and convenient room for preparing band saws. It is fitted up with a full line of Waterous band saw tools. The machinery and equipment of this mill was supplied by the Waterous Engine Works Co., Limited, of Brantford, and erected according to their plans under the supervision of their millwright.

## ERRATUM.

BY a peculiar circumstance the name of Mr. Alfred Dickie, of Colchester, N.S., was confused, in our October issue, with that of Hon. A. R. Dickey, the member for Cumberland in the Dominion Parliament. This account for the word "Honorable" which appeared below the portrait of the former gentleman. However, both are prominent lumbermen and most enterprising business men.

## ONE DOLLAR.

THE above sum represents the yearly subscription price of the CANADA LUMBERMAN, including both weekly and monthly editions, mailed to any address in Canada or the United States. Owing to postal charges, the subscription price to foreign subscribers is two dollars per year. Persons in foreign countries interested in Canadian timber products can invest that sum to no better advantage than by becoming a subscriber. Likewise every mill owner in Canada should read the columns of the CANADA LUMBERMAN. A sample copy will be gladly furnished upon request.

## BUSINESS IS BUSINESS.

"The man who whispers down a well
About the goods he has to sell,
Won't reap the gleaming golden dollars
Like one who climbs a tree and hollers."

## CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

---

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

---

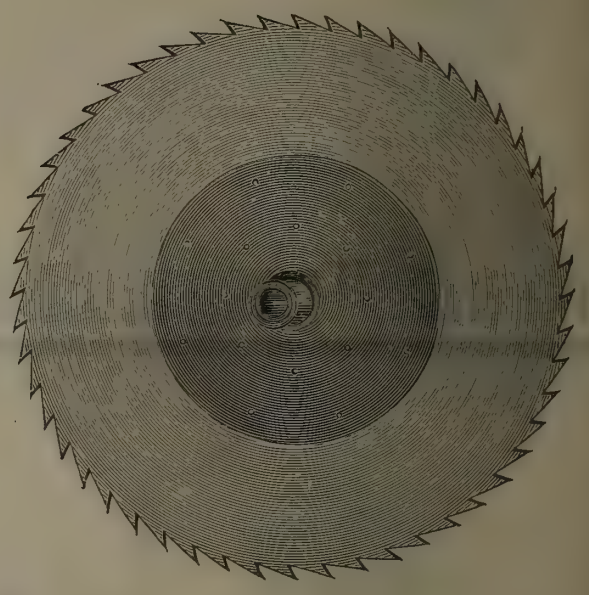
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



## THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## A YUKON SAW MILL.

IN the early days of the Klondike rush, the crafts constructed for conveying gold seekers and their supplies down the lakes and the Yukon river to the heart of the gold fields at Dawson City were of the most primitive and crude design, and it is said that a number of the wrecks in the canyons and rapids are accounted for on these grounds. With the advent of saw mills the conditions were somewhat changed. The Mining Record furnishes the accompanying illustration of one of these mills, together with the following comment :

A local company, incorporated in Victoria in January, and known as the Victoria-Yukon Trading Company, sent 30 men, in charge of one of their directors, Mr. M. King, a well-known and experienced coast logger, to Lake Bennett, and in the face of most tremendous difficulties a complete saw mill equipment, weighing altogether in the neighborhood of 200 tons, and including a 40 horse power engine and boiler, was transported over the pass —a really remarkable feat, considering the then conditions of the trail, horses and men having to make their way through soft snow in many places many feet deep and up hill at that, dragging and carrying loads which would be trying enough on the level. At length, as is generally the case, pluck, perseverance and patience were rewarded, and by the middle of March the party arrived at Lake Bennett. The work of installing the machinery was commenced forthwith, and within two weeks from that time the steam whistle startled the silence of that grim north country, and a steam saw mill was in full operation on the shore of Lake Bennett. Needless to say, the mill could hardly keep pace with the enormous demand for lumber that immediately followed, for although prices would seem terribly "steep" to coast builders, to the prospectors, who with enormous labor had previously been obliged to whip-saw every foot of timber required for their boats, the saw mill charges appeared wonderfully moderate. Many, however, preferred to purchase boats or barges ready built at the mill, and so the company found it necessary to send from Victoria a small army of competent ships' carpenters and boat builders, who received as much as fifteen and twenty dollars a day wages for their work ; but then boats sold never far short of a hundred dollars. This year already hundreds of craft of all sizes and shapes have been turned out from the Lake Bennett mills, and the industry promises to become a very important one.

SAW MILL AT LAKE BENNETT, IN THE YUKON DISTRICT.

## ACCIDENTS FROM SMALL SAWS.

IT is not a matter of surprise that so many accidents occur in saw mills, planing mills and other wood-working plants where rough lumber is cut up and finished. Indeed, it would be a great surprise if none occurred, or if they were of rare occurrence only. Of the accidents recorded in the daily papers as occurring in wood-working plants, by far the greater number are caused by the small saws used for various purposes. Doubtless most of these accidents are due to the negligence or carelessness of the employees ; at least that is the opinion of the writer, after considerable experience and observation. It is curious, but more accidents from this cause happen to hands with more or less experience than to new beginners. A long experience with rapid-moving belts and machinery induces a carelessness that amounts to a contempt for the known dangers. It was a favorite trick with the "Mohawk Dutchman," the champion scroll sawyer, to rub the ball of his thumb on an oil stone or greasy bearing, and remove the grease clean by passing his thumb repeatedly against the rapidly moving scroll saw. A new beginner would never attempt such a trick. As long as he is afraid of moving machinery, he is pretty safe from accidents ; but after a long experience he loses all fear, becomes careless and gets hurt.

It is true that many accidents are chargeable to the owners, operators or foremen. Often machines are not properly arranged on the floors, and placed in positions that greatly increase the liability to accidents. In such cases the owners or operators are liable for damages for accidents that may occur.

In this country the law gives a person who is hurt through the neglect or carelessness of his employer the right to bring suit for damages for any amount of money he may choose, and jurors generally sympathize with the poor man who is hurt and also necessarily thrown out of employment, at least temporarily; but our laws make no provision to force employers to place their machines in such positions and to protect them in such a manner as to reduce the danger of accidents to a minimum. In England they have official factory inspectors who visit the plants using machinery, periodically in person ; and if they find a machine is "dangerous," they serve a written notice to that effect on the foreman, proprietor or other proper person, and a heavy penalty attaches to operating that particular machine until it is made to comply with the requirements of the Factory Act. Recently a law has been enacted requiring a hood, or a "fence," over all circular saws. The law has been much discussed of late in the British lumber trade papers. The trouble is to provide a hood, or fence, that will protect the operator and at the same time detract nothing from the efficiency and capacity of the saw. Several styles have been invented, and doubtless one will be devised that will be satisfactory to the employers.—Southern Lumberman.

A large saw mill is being constructed at Lake Temiscouata, Que., by James Miller, of St. John, N. B., and D. A. Huntley, of Parrsboro, N.S. The mill, which will begin operations next spring, will have a capacity of about 15,000,000 feet of lumber during the summer season. The firm have a gang of men in the woods now getting out logs.

## CANADIAN HOO-HOOS.

In the United States there is a society called the Hoo-Hoo, it being a social order composed almost exclusively of lumbermen. It was organized in 1861, and has since grown to considerable proportions, having a total membership of about 6,000. Some time ago the first branch of this society in Canada was formed in Vancouver, B.C., and on November 12th last another Canadian branch was organized in Winnipeg. A number of officers of the order from Minneapolis and vicinity, including Platt B. Walker, jr., the Snark, or great chief, visited that city, and initiated the following candidates into the mysteries of the society :

Richard Dignity Vigars, Vigars Bros., Port Arthur, Ont.

Arthur Frederick Ernest Phillips, Brunnette Saw Mill Co., Winnipeg, Man.

Henry Scoots Burns, G. B. Housser & Co., Winnipeg, Man.

George Oliver Aulsebrooke, Brown & Rutherford, Winnipeg, Man.

John Malcolm Chisholm, Dick, Banning & Co., Winnipeg, Man.

George Welgord Campbell, B. C. Mills, Timber and Trading Co., Winnipeg, Man.

John Campbell Graham, Rat Portage Lumber Co., Winnipeg, Man.

Theodore Arthur Burrows, Winnipeg, Man.

Gideon Boyd Housser, G. B. Housser & Co., Portage la Prairie, Man.

Robert Hugh O'Hara, Barclay & O'Hara, Brandon, Man.

Daniel Boyce Sprague, D. E. Sprague, Winnipeg, Man.

John Dick, Dick, Banning & Co., Winnipeg, Man.

Douglass Cameron, Rat Portage Lumber Co., Rat Portage, Ont.

Magnus Stockholm Esbjornsson, Abbott Bros., St. Paul, Minn.

After the ceremony was completed an adjournment was taken to the Holmes restaurant, where an excellent banquet was participated in. Short addresses were made by all present, and the most cordial and friendly relations established between those who, while living in different countries, have many interests in common.

The appointment of a vicegerent for Manitoba was referred to the newly initiated members, and John C. Graham was uninously selected for that honor. Mr. Graham is one of the representative lumbermen of the province, a genial gentleman and a general favorite.

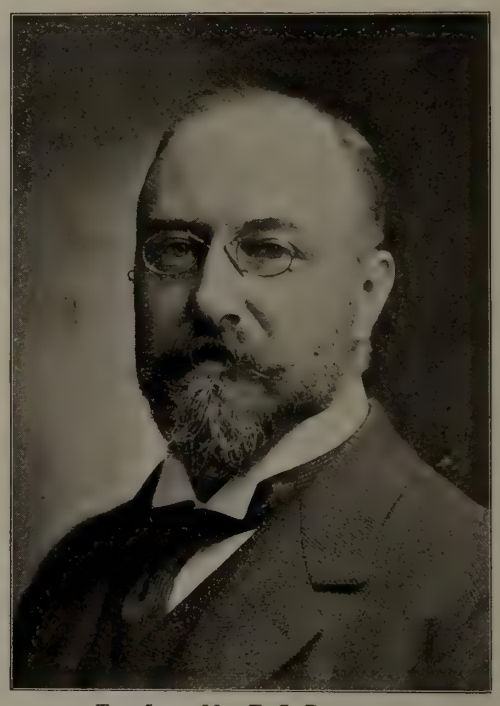
## MAKING CLOTHESPINS.

There are probably very few people outside the trade who know anything concerning the vast number of clothespins that are annually required to supply the millions of housekeepers throughout the United States. It is estimated that as many as 50,000,000 dozen, or 600,000,000 single pins, are manufactured in eastern and western factories every year. Clothespins are made principally of beech and maple. Blocks of this wood are fed to a very ingenious and exceedingly rapid-running machine, which has three separate compartments. One of these cuts a block up into a dozen or more pieces, each of which is suitable for forming a pin. It next seizes and cuts the "crutel," or place that is to grip the wash on the clothesline, and the final operation turns the neck and head of the pins and smoothes and finishes them off by the bushel, ready for use. The pins are then packed into boxes, each containing 720, and the boxes are then nailed up by another labor-saving machine, ready for the market.

## THE LATE MR. F. S. RATHBUN.

In lumber circles in Canada no name is more familiar than The Rathbun Company, of Deseronto, Ont. Widespread grief will therefore be felt at the death of Mr. F. S. Rathbun, one of the active partners and treasurer of the company, who was called away on the morning of November 26th, his death being due to heart failure. He appeared in the best of health and spirits the previous evening, arose in the morning at his usual time, and went to his dressing room, where he suddenly expired. His death is indeed a great loss to his relatives, the Rathbun Company, and the community at large.

Frederic Sherwood Rathbun was the son of the late Hugo Burghardt Rathbun, the founder of the Rathbun Company, and brother of Mr. E. W. Rathbun, the manager of the company. He was born in Deseronto on January 26th, 1856, and was one of a family of ten children, of whom four survive. He attended school in New York city, and at the early age of sixteen entered the office of H. B. Rathbun & Son, subsequently taking the duties of accountant in that firm.



The Late Mr. F. S. Rathbun.

When it became incorporated as the Rathbun Company, he was appointed secretary-treasurer of that great business organization. The position was one of great responsibility. His ready tact, prompt decision and wonderfully methodical arrangement of duties enabled him to perform the difficult task in a manner which won the admiration of all. He was always approachable by the members of the office staff, and secured their confidence, respect and loyal support. He was a thorough man of business, giving his close attention to the management of the department immediately under his supervision, and with every detail of which he was conversant. He was closely identified with the general management of the extensive business of the company, and in this respect his loss may be said to be irreparable, Mr. E. W. Rathbun losing in him a wise counsellor and strong right arm, as well as an affectionate brother.

In addition to his position in the Rathbun Company, deceased was also treasurer of the Bay of Quinte Railway Company, president and treasurer of the Oshawa Electric Railway Company, treasurer of the Thousand Islands Railway Company, treasurer of the North American Telegraph Company, president of the Deseronto News Company, and treasurer of the Muskoka Slide and Boom Company. He avoided publicity, but nevertheless always took a deep interest in the affairs of the country, and more particularly in the town of Deseronto. He especially interested himself in educational affairs, being a member of the High School board.

Mr. Rathbun held the position of treasurer of Deseronto ever since it was incorporated as a town. He was postmaster of Millpoint and Deseronto for twenty years, and gave much attention to the proper management of the office. He was fond of yachting, boating, bicycling, and all kinds of manly sports, was for several years captain of the Deseronto Canoe and Boat Club, and, it will be remembered, held for one year the honorable position of Commodore of the American Canoe Association. He was very firm and constant in his friendships, and in his intercourse with men of business he was regarded as the soul of honor ; hence the sorrow for his loss in such an extended circle of friends.

In religion Mr. Rathbun was a Presbyterian, being a trustee and a member of the board of managers of the Church of the Redeemer. On October 23rd, 1877, he married Miss Jean McMurrich, daughter of the late Hon. John McMurrich, of Toronto ; three children survive him. His funeral was made the occasion of a spontaneous expression of respect for the dead and sympathy for the bereaved.

## HOW FLAG STICKS ARE MADE.

The little sticks to which flags are attached are produced automatically by an ingenious machine recently invented for the purpose. By the old methods of manufacture it would hardly be possible to supply the demand, and certainly not at the remarkably low price at which this machine turns them out. Under the old method each stick was rounded separately, and the operation was very tedious and slow. By means of the new invention the whole board is fed into the machine. These boards are first sawed into the length of the finished stick. There are two sets of cutters, one cutting on the top and the other on the bottom of the board. These cutters are especially shaped, the upper cutter cutting one-half the circle of the finished stick, the lower cutter cutting the other half, and this is done so nicely that when the board has passed the cutters it is cut into finished round sticks, each separate from the other, and each so nicely rounded that the meeting point of the two sets of cutters cannot be observed. After leaving the machine, the finished sticks drop into a large box or hopper, and are then stacked up ready for the flags. The machine is made so that it will cut any size of stick, from the very smallest up to any diameter desired, by simply changing the cutters on the cutting mandrels. The machines are arranged so that these cutters can be removed from the mandrels very readily, and new cutters can be put in place in about a minute's time. The upper and lower cutters are placed in an almost vertical plane, so they will cut the stick at almost the same time, and after the sticks leave the cutters they are fed into circular grooves before they leave the machine, so that each separate stick is held firmly in place and a smooth cut ensured.—Invention.

# CHAMBER OF SHIPPING BRITISH NORTH AMERICAN TIMBER AND DEAL CHARTER, 1898-99.

Following is a copy of the proposed steamship charter governing the shipment of timber, deals, etc., from Canada to Great Britain, as drawn up by the British Chamber of Shipping :

CODE NAME.

IT IS THIS DAY MUTUALLY AGREED between ..... 189
Owners of the good Steamship called the
of Tons net register, or thereabouts, and of , St. Petersburg standards, the Shipowners
having a margin of 10 per cent. more or less, Master,
now
and of Charterers.

1.—That the said Steamship, being tight, staunch and strong, and every way fitted for the Voyage, shall with convenient speed (having liberty to take Cargo for Owner's benefit, to any port or ports on the way, or to ), and after discharge of same, sail and proceed to

Memo.—Owners may agree to expunge the words "always afloat" at loading and/or discharging ports.

or so near thereunto as she may safely get, and there load, always afloat, from the Agents of the said Charterers, a full and complete Cargo of
The Steamer to be provided with a Deck load, at full freight, at Charterers' risk, and with a sufficient quantity of ends, eight feet and under, for Broken Stowage only.
Not exceeding what she can reasonably stow or carry, over and above her Tackle, Apparel, Provisions and Furniture : and being so loaded shall therewith proceed to
or so near thereunto as she may safely get, and deliver the same, always afloat, on being paid Freight as follows :—

| | £ | s. | d. | |
|---|---|---|---|---|
| For TIMBER | | | | per load of 50 cubic feet Customs calliper measure. |
| " DEALS and BATTENS | | | | " St. Petersburg Standard Hundred. |
| " BOARDS | | | | do. do. |
| " DEAL ENDS, for broken stowage, eight feet and under | Two-thirds | freight. | | do. do. |
| " BOARD ENDS, for broken stowage, eight feet and under | | | | |

Memo.—Battens to be considered 2½ in. x 6 in. and up.

The Owner not to be responsible for any shortage or damage except as ascertained on delivery ex Ship.
The Steamer to be free of Bateau hire on broken stowage at Quebec.
The freight is in full of all Port Charges and Pilotages.
In the United Kingdom the Timber to be measured by the Customs Fund Officers; on the Continent or in the United Kingdom where there are no Customs Fund Officers, then to be measured by an official measurer. Measurements to be calculated upon the basis of full square dimensions (no allowance to be made for wane), and the expense of Measuring to be divided between the Charterers and the Owners of the Steamer.

2.—The Master or owners to telegraph the Shippers of the Cargo (telegraphic address as per margin), giving at least days' notice of the probable date of Steamer's arrival at the loading port. Default of this not to be considered a breach of Charter, but Charterers not to be responsible for delay in loading caused by such default of the Master or Owners.

3.—The cargo to be loaded and discharged with customary Steamship dispatch as fast as the Steamer can receive and deliver during the ordinary working hours of the respective ports, but the Charterers undertake that in no case shall the minimum quantity supplied in loading be less than standards per day, nor less than standards per day received at the Port of Discharge. Sundays and legal holidays in both loading and discharging excepted, unless used. Should the Steamer be detained beyond the time stipulated for loading and discharging demurrage shall be paid at the rate of pounds per running day, payable day by day. The cargo to be brought to and taken from alongside the Steamer at the Charterers' risk and expense, any custom of the respective ports to the contrary notwithstanding. The Steamer is not to be responsible for any cargo until same is taken hold of by her loading tackle. The Master has liberty to bring phosphate or other dead weight as ballast for Steamer's benefit.

4.—Sufficient Cash for Steamer's ordinary disbursements to be advanced the Master, if required by him, at Port of Loading, subject to 2½ per cent. Commission and cost of Insurance.

5.—If the Cargo cannot be loaded and/or discharged by reason of a strike or lock-out of any class of workmen essential to the loading and/or discharge of the Cargo, or by reason of epidemics, the time for loading and/or discharging shall not count during the continuance of such strike or lock-out or epidemic; a strike or lock-out of the shippers' and/or receivers' men only shall not exonerate them from any demurrage for which they may be liable under this charter if by the use of reasonable diligence they could have obtained other suitable labor, and in case of any delay by reason of the before mentioned causes, no claim for damages shall be made by the shippers, the receivers of the Cargo, the owners of the ship, or by any other party under this charter.

6.—The Bills of Lading shall be prepared by the Shippers of the Cargo in accordance with the form endorsed on this Charter, and shall be signed by the Master, quality, condition and measure unknown, freight and all conditions, clauses and exceptions as per this Charter.

7.—The Act of God, the Queen's Enemies, Restraints of Princes and Rulers, and Perils of the Seas excepted. Also Jettison, Fire, Barratry of the Master and Crew, Pirates, Collisions, Strandings and Accidents of Navigation, or latent defects in, or accidents to, Hull and/or Machinery, and/or Boilers, always excepted, even when occasioned by the negligence, default, or error in judgment of the Pilot, Master, Mariners or other persons employed by the Shipowner, or for whose acts he is responsible, not resulting, however, in any case from want of diligence by the Owner of the Steamer, or by the Ship's Husband or Manager. The Steamer has liberty to call at any ports in any order, to sail without Pilots, to tow and assist vessels in distress, and to deviate for the purpose of saving life or property, and has liberty to coal at any port or ports, including Cape Breton, without prejudice to this Charter.

8.—Should ice (except in the Spring) effectually prevent the Steamer getting into the port of loading, this Charter to be null and void ; and if during the loading (except in the Spring) ice should make it dangerous to complete the Cargo, the Master shall have liberty to sail with what Cargo he has on board, with the option of filling up at a port or ports on the way home for a port or ports on the way to, or for the port of discharge under this Charter party for Owners' benefit. If the nation under whose flag the Steamer sails shall be at war whereby the free navigation of the Steamer is endangered, this Charter shall be null and void at the last outward port of delivery or at any subsequent period when the difficulty may arise, previous to Cargo being shipped.

9.—The freight to be paid in cash without discount on unloading and right delivery of the Cargo, but the receivers of the cargo are to pay freight during delivery ; if to the Continent in cash at the exchange current on the day of Steamer's arrival, for short sight Bankers' Bills on London.

10.—The Master not to be obliged to sign more than one set of Bills of Lading, unless due written notice be given him before commencing to load, and the cargo to be supplied, so as to enable him to keep separate the different consignments, and suitable lengths to be given with each parcel, so that while keeping the parcels separate the hold space be not wasted. In no case more than sets Bills of Lading shall be required.

11.—In case of average the same to be settled according to the York/Antwerp Rules, 1890, excepting that jettison of deck cargo (and the freight thereon) for the common safety shall be allowable as General Average.

12.—If discharged in a dock in London Consignees to pay two-thirds of the dock dues, and unless the Steamer is to be discharged in the Surrey Commercial Dock, the Charterers are to give the Owners seven days' notice before arrival where the Steamer is to discharge.

13.—The Master or Owners to have an absolute lien upon the Cargo for all freight, dead freight, demurrage and average, and should the receiver require the cargo to be delivered overside or at a place where the Owners cannot exercise their lien, then the approximate freight, etc., to be paid before delivery.

14.—The Charterers to have the option of cancelling this Charter if the Steamer has not arrived at her Loading Port on or before the day of next.

15.—Penalty for non-performance of this Agreement, proved damages, not exceeding estimated amount of freight.

16.—The Brokerage is at Five per cent. and is due to on the signing hereof, and the Steamer is to be reported by them at the Custom House at

## A MISLEADING ARTICLE ON BELTING.

In our issue of November last, we printed an article entitled "Notes on Belting," by G. R. McLeod, McGill College, Montreal, which on account of the omission of very important data in the tables of comparison, and several errors embodied in the article itself, especially in regard to "Reddaway" or "Camel Brand" hair belting, is very misleading. This has been brought to our notice by Messrs. W. A. Fleming & Co., of Montreal, agents for the "Camel Brand" hair belting.

When the matter was brought to our attention, we communicated with Prof. Bovey, Dean of the Faculty of Applied Science, McGill University, Montreal, and received in reply the following letter, wherein he points out how the table of comparison is misleading :

DEAR SIR,—The account as given by you is substantially correct, but one very important omission has been made. In all the samples of the "Reddaway" belting, the total extension was given without any statement as to the load under which this extension was produced, and consequently in the table the results are very misleading, although they are correct. For example :

In sample No. 1, the total extension in a length of 30 inches was 10.03" under a load of 7,500 lbs.

In sample No. 2, the total extension in a length of 30 inches was 10.15", under a load of 6,050 lbs.

In sample No. 3, in the same length, the total extension was 7.34", under a load of 10,000 lbs.

In sample No. 4, in the same length, the total extension was 8.27", under a load of 7,200 lbs.

In sample No. 5, the total extension in the same length was 7.18", under a load of 9,200 lbs.

In sample No. 6, the total extension in the same length was 11.4", under a load of 19,400 lbs.

If a table is constructed, it should be made so as to give the extension per cent. per square inch of sectional area, and it should be clearly stated also over what length the extension is measured. All these items are of importance in making comparative estimates.

I think it is only fair to the Reddaway Company that you should make a statement to clear up these doubtful points, as I consider the "Camel Brand" belting an extremely valuable production. I am, Yours truly,

(Signed) HENRY T. BOVEY.

We have also been authorized by Prof. Bovey to state that the tests in question were made by Mr. George R. McLeod, under Professor Cecil B. Smith, when the former was an undergraduate in the Faculty of Applied Science. The actual results of these tests were communicated by Professor Smith in a letter which has been placed at our disposal, as follows :

MCGILL COLLEGE, MONTREAL,
March 30th, 1898.

W. A. FLEMING, ESQ.,
Agent F. Reddaway Belting & Hose Co., Ltd.

DEAR SIR,—The following are results of tests on pieces of Reddaway's "Camel Brand" hair belting, kindly forwarded by you for our 4th year civil engineering students to test :

| Dimensions. | Weight per foot. | Area of Section. | Time of Test. | Permanent Set in 30 in. | Breaking Load. | | Stretch in 30 inches under loads of | | | | | | | | | |

I am, Yours truly,
(Signed) CECIL B. SMITH (Professor).

We also give the following extracts from our correspondence with Messrs. W. A. Fleming & Co., and the comparative tables, furnished by them, which can be understood at a glance :

"It would be almost impossible to make a comprehensive table of comparison from the samples of different beltings, as none of the samples were of the same width and weight. The above table gives the ultimate strength (breaking load) and stretch of the "Camel Brand" samples, tested under different loads up to the ultimate strength. There is no kind of belting that will show so small a percentage of extension, under similar loads, and no belting will stand as great a strain per square inch as this table shows the "Camel Brand" capable of resisting.

"A sample of English oak-tanned leather belting, tested at the same time reached its breaking strain at 2200 lbs. per square inch while the limit of the "Camel Brand" was 5,968 lbs. per square inch. Before the breaking strain of the leather was reached it stretched 9 per cent. under a greater lord, viz., 2460 lbs. per square inch. The single "Camel Brand" stretched only 7 per cent. Moreover, under a load of about double the breaking strain of leather the stretch of the "Camel Brand" was scarcely any greater than the ultimate strength of leather. By this it will be seen that the "Camel Brand" stretches much less at the breaking strain of oak-tanned leather, and its breaking load is actually two and a half times greater.

"The following results of tests will be of interest, being made under the direction of Mr. Chas. Hopkinson, M. Inst. C.E., M. Inst. M.E., B.Sc., of Manchester, England, who designed a very elaborate and perfect machine, and erected a testing apparatus, enabling him to accurately ascertain the driving power of any belt up to 50 h.p.

COMPARATIVE ULTIMATE STRENGTHS OF THE "CAMEL BRAND" OR "REDDAWAY" BELT AND BEST DOUBLE LEATHER BELTS.

| Width of Belt in Inches. | "Camel Brand" Belting. | Double Leather. |
|---|---|---|
| 4 | 6,866 lbs. | 4,908 lbs. |
| 6 | 11,515 lbs. | 5,641 lbs. |

"In this connection it may also be of interest to give a few of the results of a series of tests to ascertain the ultimate strength of different widths of "Camel Brand" belting, which were carried out by Mr. Chas. Hopkinson :

ULTIMATE STRENGTH OF "CAMEL BRAND" BELTING.

| Width of belt in inches. | Breaking load in lbs. per inch of width. | Width of belt in inches. | Breaking load in lbs. per inch of width. |
|---|---|---|---|
| 3 | 1,890 | 7 | 1,819 |
| 4 | 2,084 | 8 | 1,778 |
| 5 | 1,870 | 9 | 1,763 |
| 6 | 1,838 | 10 | 1,714 |

"These tests compare favorably with those made at McGill College.

"Extracts from further tests made by Mr. Hopkinson, comparing the driving power of link leather, ordinary leather (best quality) and "Camel Brand," will be of interest :

"The results are tabulated to enable the comparisons to be readily made. The belts tested were the "Reddaway" or "Camel Brand" belting, 6 and 3 inches wide, of the regular make; link leather belts, 6 and 3 inches wide; plain leather belts (best quality) 6 and 3 inches. The belts were all run for several hours under considerable tension before testing. They were, in fact, in as favorable a state as they could be. In the case of the 6 in. link leather belt, which was more difficult to get into good running order, the experiments were repeated; and the 3 in. link leather belt was run for some hours driving about 8 h.p., in addition to the same preliminary run as the "Camel Brand" and plain leather belts.

"The belts in all cases were jointed with metal fasteners, and no failure of a joint took place.

"The tests upon the 6 in. belts were repeated after altering the crowning of the pulley. At first the driving pulley was crowned 9/32 in. in 8⅞ in. wide; after running some time, the crowning was reduced to 6/32 in.; the results of the second run were distinctly better, and the belts showed a better surface at the edges.

"In belts 3 inches wide, running 1353 feet per minute the safe load of link leather and cemented leather in both cases was 6 horse power, while that of the "Camel Brand" was 8.72 horse power. With belts 6 inches wide the results were precisely similar.

HOPKINSON'S EXPERIMENTS—FIXED CENTRES.
Belts 3 inches wide running 1353 feet per minute.

| Total Initial Tension. | Link Leather. | | Leather. | | Camel Brand. | |
|---|---|---|---|---|---|---|
| | Indicated Horse Power. | Slip % Loss of Power & Speed. | Indicated Horse Power. | Slip % Loss of Power & Speed. | Indicated Horse Power. | Slip % Loss of Power & Speed. |
| 457 lbs.—76 lbs. per inch width of belt of slack and tight parts. | 8.4 | 1.65 | | | | |
| | 10.43 | 1.95 | | | | |
| | 12.54 | 2.65 | 12.83 | 2.1 | 12.75 | 1.0 |
| | 14.6 | 3.16 | | | 14.08 | 1.15 |
| Initial arcs of contact, 180°. | | | 15.09 | 3.0 | 15.8 | 1.26 |
| | | | 16.24 | 3.4 | 16.69 | 1.48 |
| | | | | | 18.65 | 1.9 |
| | | | | | 19.66 | 2.4 |
| 793 lbs. — 132 lbs. per inch of width. | | | 12.66 | 1.3 | 12.59 | 0.8 |
| | 16.65 | 2.05 | 16.81 | 2.1 | 16.73 | 1.15 |
| | 20.82 | 2.56 | 20.82 | 3.6 | 20.75 | 1.4 |
| | 22.94 | 3.16 | | | 22.67 | 1.48 |
| | | | | | 25.62 | 1.75 |
| | | | | | 28.5 | 2.35 |
| | | | | | 30.4 | 3.0 |

"Remarks : With less tension than 457 lb. the linked leather belt would not drive steadily.

"The loss of speed by slip and creep of the belts, is for any given load twice as much with the leather belt as with the "Camel Brand" belt.

"With the initial tension of 132 lb. per inch of width, which is very high for a leather belt, the leather belts showed less inferiority relatively to the "Camel Brand" belts.

"The results indicate that the usual allowance of 2 per cent. for slip and creep is sufficient for leather belts, and that 1 per cent. would be equally ample for the "Camel Brand" belts.

COMPARISONS OF DRIVING POWERS OF BELTS 6 IN. WIDE RUNNING 1353 FEET PER MINUTE.

"With regard to the construction of the "Camel Brand" belting in your article of November it is stated "the belting is made partly of cotton and partly of coarse camel hair. The cotton is the material which forms the chief strength and therefore the longitudinal fibres are cotton. The hair yarn forms a woof, although in some of the specimens tested there were strands of hair running longitudinally as well as transversely. This statement is entirely in error; on the slightest examination anyone will see that just the contrary is the case; the hair forming the chief strength of the fabric, the cotton is simply the woof, no longitudinal strain bearing on it whatever."

## DECREASED PRODUCTION OF LOGS.

LITTLE CURRENT, Nov. 17th, 1898.

To the Editor of the CANADA LUMBERMAN :

DEAR SIR,—In your November monthly edition you state that it is reported that J. & T. Charlton intend to cut ten million feet of logs the coming winter for exportation to Michigan. The report is not correct, as their cut will be less than one-half of that amount, and in regard to towing the logs to Michigan, it is very likely they will do so providing the manufacturing embargo is removed; if not, of course they will have to manufacture in Canada. The reason I refer to this matter is, first, because the amount is far too large, and secondly, because Mr. John Charlton is a member of the Joint High Commission now sitting in Washington, and that the report might influence American operators to increase their output perhaps to their sorrow.

Yours truly,
J. C. WELLS,
Manager for J. & T. Charlton & Co.

## ONE DOLLAR.

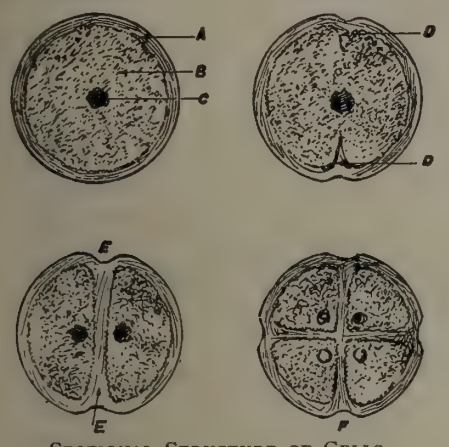
THE above sum represents the yearly subscription price of the CANADA LUMBERMAN, including both weekly and monthly editions, mailed to any address in Canada or the United States. Owing to postal charges, the subscription price to foreign subscribers is two dollars per year. Persons in foreign countries interested in Canadian timber products can invest that sum to no better advantage than by becoming a subscriber. Likewise every mill owner in Canada should read the columns of the CANADA LUMBERMAN. A sample copy will be furnished upon request.

The Lloyd Mfg. Co., of Kentville, N. S., advise us that their business was started in a small way fifteen years ago by Mr. J. L. Lloyd, the present proprietor, and gradually increased as capital and demand would warrant. Their plant was greatly increased last fall. The factory has a frontage of 90 feet by 120 feet, is two stories, and employment is given to about 25 skilled mechanics. Shipments of machinery are now made to Newfoundland, Quebec, New Brunswick, and Pacific coast.

## HOW TREES GROW.

By John Black.

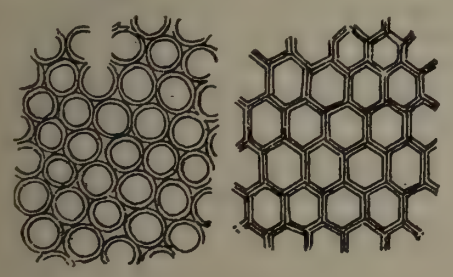
BEFORE attempting to offer an explanation of the curious processes whereby trees develop in stature, it will be necessary, in the first instance, to briefly describe the nature of the materials of which they consist, as well as to shortly notice the intimacy with which the latter are associated with and depend upon each other. In the first place, there is a structural peculiarity which is not only common to all trees but to all plants—from the tiniest mosses to the most gigantic trees of California, which often exceed 400 feet in height—and which comprises a complex system of cells or vesicles of which all vegetable growths are composed. These cells, as the name imports



SECTIONAL STRUCTURE OF CELLS.

are minute, bladder-like cavities, bounded by fibrous walls and usually containing both fluid and solid matter of a heterogeneous composition. These and their numerous modifications may be very aptly compared to the bricks or stones of which a house is built, but with this remarkable difference, that they are continually dividing and sub-dividing and are constantly being supplied with fresh layers of what corresponds to cement as long as the life of the plant endures. The microscopic examination of a thin shaving of any vegetable product, whether it be the pulp of an orange or the pith of an oak, will give the best idea of the general appearance of these formations. Geometrically they are infinitely varied in form, owing to mutual pressure and other causes, but the designs that are of most frequent occurrence in the vegetable world are illustrated on this page. And just as they are of no uniform shape, neither are they of any regular compass. In fact, they alternate in magnitude in different plants from about the thirteenth of an inch to the forty-thousandth of that measurement. In order to understand the process of growth or, rather, of the multiplication and expansion of these animate organisms, it is desirable that an examination of the structure and functions of what are known as the "active cells" should first be made.

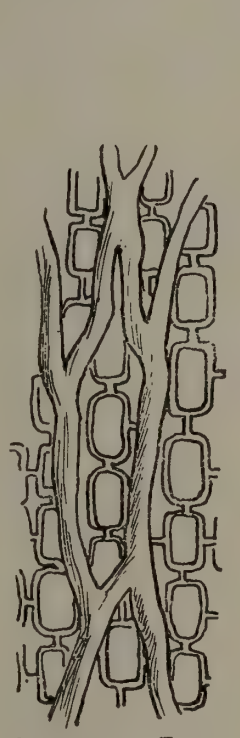
First, there is an outer covering, the cell wall, which is more or less elastic and which varies in thickness and density. In its earlier stages it is soft in texture and freely permeable to water. Inside there is a softer and more elastic layer, technically called "primordial utricle" or vesicle. The latter is scarcely membraneous like the



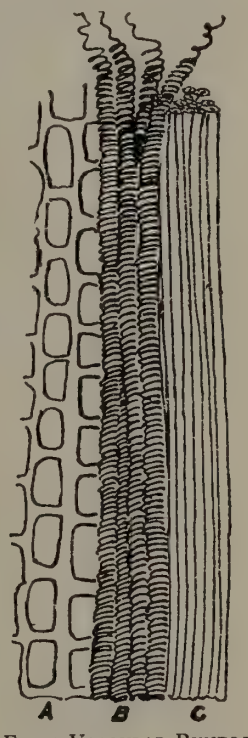
PITH CELLS.

cell-wall, and is merely the outer film of the softer matter called protoplasm. In the latter there is usually, but not invariably, present a small globular body called the nucleus, which, in turn, often contains smaller granules called nucleoli. The accompanying figure will enable the reader to understand these structures and their relative positions more clearly. The most important of these granules contain the green coloring matter which is so freely distributed throughout the composition of tree foliage, and when they disappear the activity within the cell walls diminishes and the tree becomes correspondingly lifeless. When the protoplasm is present in what may be called a healthy condition, these granules can often be seen moving about from point to point in a manner which strongly suggests the circulation of the blood in animals. The regularity of this movement of the fluid contents of the cell-sap can be distinctly seen with a powerful microscope even in the case of so minute an object as the hair of a common nettle. The formation of new cells begins by a change in the protoplasm, the whole of which or a part only may be concerned in the production of such new cells. By the division of this substance, which has been called "the physical basis of matter," into new cells, and their subsequent alteration, the mass of the entire plant is built up. Some of the simpler forms of trees and plants readily illustrate the way in which the protoplasmic contents of a cell give rise to fresh cells. In certain of these, as shown in Fig. 3, there is a general infolding or splitting up of the cell at two or more opposite points, which finally results in the production of an equal number of new and distinct cells, each with its proper complement of walls, nucleoli, &c. As the new walls develop which separate the individual compartments, the lines dividing the latter become more clearly defined, and this intercellular substance, or vegetable cement, is the material by which the cells are bound together and which permits of their subsequent division and expansion.

The process of growth in nearly all the higher forms of trees necessitates changes at certain points in their structure into string-like fibres or sinews to lend strength and support to the softer parts. This is easily seen when a leaf is reduced to the form of a skeleton by maceration or any similar means that will reveal the beauty and variety



LATICIFEROUS TUBES.



FIBRO-VASCULAR BUNDLE.

of its framework. If the stems of some of our larger ferns are treated in the same way they will exhibit, under the microscope, an amazing labyrinth of network, called "fibro-vascular bundles," as shown, which are the same in principle as those met with in the case of their sturdier brethren, the trees of the forest. In such a bundle of fibres there are generally two modifications—one called bast, a, and the other what is virtually known as wood, b. In the earlier stages these vascular bundles are composed of ordinary cells, by the transformation of which they are produced, the bast layer being usually on the outside in the case of trees proper, and the cells which continue in an active state lying between it and the inner wood. Without entering into details, it may be sufficient to state that the parts of a vascular bundle are either true vessels or merely fibrous. The former consist of long cells in rows one over the other, the partitions between their ends partially or entirely disappear and so form continuous tubes, the most notable of which have a spiral band in the interior, either continuous or broken up in places, and closer or wider apart in different cases.

The other fibrous portions of a bundle are long, spindle shaped, and without spiral bands. They often contain grains of starch, sugar, gluten, etc., and are readily detected when the wood is cut into very thin slices. The laticiferous tubes are a very interesting modification of the true vessels of this vascular system, because they contain a limpid or milk-like juice, and are in other respects a curious blending of the principles carried out in both the lacteal and blood vessels of animals.

Certain chemical changes always take place during growth. Water, so necessary for life in the plant, consisting as it does of the two gases, oxygen and hydrogen, yields supplies of these, and is also the medium by which other matters dissolved in it are conveyed to the tree or plant. The more important and life-sustaining of these are carbon, oxygen, nitrogen, hydrogen, and such other requisites as potash, lime, magnesia, phosphorus, and silica. The operation of such external influences as light and heat are just as important to the well-being of trees as the more material elements which are absorbed into their composition. The stimulus of light on the green contents of their leaves is necessary for the formation of new products and for the storing up of these in their internal recesses, for when a full supply of these is deposited in the cells there is less necessity for the action of light itself. The presence or absence of the latter has also a considerable influence upon the movements of the grains of chlorophyll. In darkness, more or less dense, these collect into bodies and display a degree of inertness which, if sufficiently prolonged, would lead to the eventual withering away and utter destruction of the tree; the phenomena presented being, in fact, almost precisely similar to what would inevitably occur in the case of an animal whose circulation, having become impaired, ultimately ceased altogether. There is still some difference of opinion as to whether those green granules are endowed with voluntary motion or whether they are carried about by some equally unknown property possessed by the fluid in which they float. The combination of light, heat and moisture enable a tree to produce new products from carbon, nitrogen, oxygen, etc., which are technically known as albuminoids, and which yield material in abundance for sustaining its life. When the juice of a plant is heated, part of it coagulates, just like the white of an egg, called albumen, when treated in the same way, and this has been extracted from the earth from many substances and converted by the instrumentality of the tree into its albuminous form.

Evaporation of water from the leaves of a tree determines the absorption of fluid by its roots, and its subsequent diffusion throughout the tissues of the plant by osmose —that is, the tendency of fluid matters to mix and combine in equal proportions when they come into contact. New cells are then formed by the division of the protoplasmic matter, as already described, and the succeeding alterations they undergo, as they are repeatedly subdivided, build up the separate organs which collectively constitute the entire tree. The rate of growth of certain trees is a subject of much interest and importance to both forester and carpenter. A cross section, cut at the base of the stem, shows a central spot—the pith—and, arranged concentrically, a number of layers, called the "annual zones," marking the growth of each year, surround this point. The exact age of a log of timber can thus be ascertained (when the date of its being felled is known), and its suitability for the purposes for which it may be required can therefore be all the more readily gauged. Whether or not it was grown in congenial soil may also be gathered from an inspection of the thickness or spareness of these tell-tale rings, the appropriateness of the ground being estimated by the quality and depth from year to year. In all cases the external or youngest layers are the most juicy and least dense, and every carpenter knows the difference between sap-wood and heart-wood.

In this way trees grow, but how the flint of the soil is transferred into their substance, or in what manner that which of itself is incapable of giving nourishment is transformed into wholesome vegetable aliment, is so far, unfortunately, a puzzle alike to the chemist and the botanist. —Illustrated Carpenter.

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touchin these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## FREIGHTS ON HARDWOODS.

THE injustice from which the hardwood industry of Canada has so long suffered as a result of discrimination in freight rates may yet be rectified. As forecasted in a previous issue, the question has been taken up by the Lumbermen's Association of Ontario, and recently a deputation from that body interviewed the traffic managers of the Grand Trunk and Canadian Pacific railways at Toronto, on the subject. It was pointed out that no discrimination should be made as between pine and hardwood lumber, that the higher freight rates on the latter could not justly be maintained, and that it would be in the interest of the lumbering industry, the railway companies, and the country generally, to encourage the manufacture of hardwoods. The representations of the deputation were promised the usual consideration.

With but few exceptions, from one to two and one-half cents per 100 pounds is charged against hardwoods as compared with pine and other soft woods shipped to points in Canada. This can be verified by reference to the freight rates published on the third page of the CANADA LUMBERMAN WEEKLY EDITION, and which are revised by the railways. Taking one or two points for illustration, the rate from the Owen Sound, Wiarton and Hepworth district to Toronto is 6½ cents per 100 pounds on pine and 7½ cents on hardwoods; to Montreal from same district the rate is 12½ and 15 cents respectively, a difference of 2½ cents. The average discrimination, however, to Ontario points, is about one cent per 100 pounds. This, at a glance, seems a trifling discrimination, yet a little investigation shows how seriously it is affecting the hardwood trade. The minimum car-load of lumber, as fixed by the railway authorities, is 10,000 feet, and the minimum weight 30,000 pounds. Thus, on a car-load of hardwood lumber the overcharge of one cent per 100 pounds would be equal to three dollars, or 30 cents per thousand feet. This, in these days of keen competition, is quite an important item.

The business of exporting hardwoods to the European markets is handicapped to a still greater extent. From the hardwood district of Owen Sound to Montreal, the nearest point of vessel loading, the additional charge on a car-load of hardwoods over that of pine is $7.50, equal to 75 cents per thousand feet. This cannot but have a tendency to discourage any efforts in the direction of establishing an export trade.

What method of figuring was adopted by the railway authorities in arriving at the decision to subject hardwoods to a higher rate of freight than pine it is difficult to conceive. It is generally understood—in fact, we are so advised by the railways—that the schedule of rates is based upon the valuation of the goods. This being so, the inference is that the members of the Classification Committee are of the opinion that hardwood lumber is more valuable than pine. Such is not the case. Were there to be found in this country even moderate quantities of mahogany, walnut, rosewood, cherry, etc., the contention that hardwoods are more expensive than pine might be justified. But we observe that such woods as these are placed in a higher category than the other hardwoods, and are not permitted to be shipped at the same rate of freight, the railway companies reserving the right to make special charges for more valuable woods. The evident intention is, therefore, to discriminate against the cheaper varieties of hardwoods.

The hardwood timbers found most plentifully in Ontario are birch, ash, elm, maple and beech. The average selling price of these is, we believe, below that of pine, while the cost of manufacturing is even greater, leaving a smaller profit for the manufacturer. The waste in pine during process of manufacture is comparatively small, while at least 25 per cent. of the hardwood timber finds its way to the wood pile, in the shape of hearts and other defects. The remaining 75 per cent. is worth about $13 per thousand feet at the mill. Out of every thousand feet of logs only 750 feet of saleable lumber is obtained, netting $9.75. The average price paid for logs is $6 per thousand feet, and adding $2 as the cost of manufacture, brings the cost to the mill man of producing one thousand feet of marketable lumber to $8. It will thus be seen that the margin of profit is very small, and that but a limited revenue is derived from the small cut of the average hardwood mill. Another feature of the hardwood trade is that it is impossible to handle large stocks, as can be done with pine, owing to scattered growth, and the fact that only a small percentage of it is suitable for saw logs, small and rough logs going into firewood.

We believe it to be a short-sighted policy on the part of the railways to discriminate against the hardwood industry, which, more perhaps than many other branches of commerce, requires fostering at least to a reasonable extent. If given equitable freight rates, and under present conditions, the export of hardwoods to foreign markets is certain to increase, as it has done, even under unfavorable circumstances, during the past few years. Ontario, the hardwood province of the Dominion, is so situated geographically as to be largely at the mercy of the railway companies with respect to export.

The question of equitable freight rates also bears a close relation to the development of local industries. The scattered growth of hardwoods makes it necessary that they should be transported to some central point for manufacture at the lowest possible cost. Within the last few years several factories have been established in Ontario for the manufacture of wood specialties, such as chair stock, clothboards, etc., for export, hardwood timber being used as the raw material. These industries, employing hundreds of workmen, are of great advantage to the country, utilizing, as they do, much timber which could not be exported at a profit, and which would otherwise remain in the bush to be destroyed by fire. A liberal policy on the part of the railways will result in the establishment of a still greater number of such industries, as well as in greatly increasing the volume of freight traffic.

It is desirable that everyone interested in the hardwood trade should lend their aid to accomplish a reduction in the freight rate. It is believed that the Joint Traffic Association is responsible for the discrimination which now exists, and it should only be necessary to present the facts in their proper light in order to obtain redress.

## THE PROPOSED TIMBER AND DEAL CHARTER.

ON another page will be found a copy of the new timber and deal charter as drawn up by the British Chamber of Shipping for the regulation of the Canadian export timber trade. This charter is so unsatisfactory and contains so many objectionable clauses that the timber interests on both sides of the Atlantic have strongly expressed their dissatisfaction therewith. On October 28th, at a meeting convened in London, Eng., by the Timber Trade Federation, the following resolution was passed:

"That this meeting, having considered the proposed new British North America charter, formulated by the Chamber of Shipping, and having regard to the unanimous objections of the trade in all parts of the kingdom to its provisions, cannot advise members of the federation to attend the conference called by the Chamber of Shipping for November 2nd, 1898. This meeting further considers that, in view of the abortive result of the prolonged negotiations with the Chamber of Shipping respecting the Baltic charter, such conference, on the basis of the form now submitted, could not lead to any satisfactory arrangement being arrived at, the trade being satisfied that the terms embodied in the London Chamber of Commerce and similar forms now generally in use, are fair and reasonable for both parties."

This resolution has been concurred in by the shippers from Montreal and Quebec, who regard the charter as inapplicable to these ports, and not nearly so satisfactory as the London Chamber of Commerce charter now in use.

This question is one which may seriously affect the Canadian export trade, causing, as it must, a temporary deadlock in chartering. Yet the form of charter seems so manifestly un-

reasonable that we cannot but commend the course taken by the shippers.

Some of the objectionable features might be noted. In clause 1 no provision is made for satisfactory loading berths. In Montreal, for instance, there are objectionable berths, and to protect shippers the words "as directed after arrival by the said merchants" should be inserted. In clause 3 there is an important omission, viz., "only rope slings or chains properly covered with canvas to be used for loading and discharging." On the whole, this clause is not nearly so desirable as the corresponding clause in the present charter, which reads as follows: "The cargo to be supplied to the ship and to be taken from alongside, as customary, at each port. Only rope slings, or chains properly canvassed, to be used for loading and discharging. Ship to work at night at port of loading if required by charterers or shippers. Ship's hold to be thoroughly swept and cleansed before taking in cargo; no stevedores objectionable to merchants to be employed."

Clause 8 is too ambiguous. If a steamer found it to her advantage to clear away in the fall before completion of loading, she might do so, in order to fill up at other ports lower down the river, while the shipper at the original port of loading might be left with cargo on his hands which he desired to send forward.

A portion of clause 9 is almost contradictoty, inasmuch as it states "freight to be paid on right delivery of the cargo," but "receivers to pay freight during delivery."

Coming to clause 10, we read "suitable lengths to be given with each parcel, etc." This is, we believe, unworkable. The steamer is entitled to deal ends 9 feet and under for stowage purposes, and also to have them alongside the steamer so as to be available when required, but under the new clause the master could demand pieces two feet, or any other length, to fill up a hole, just as he pleases. No mention is made of two inch stock, large quantities of which thickness, in both spruce and pine, are shipped from the St. Lawrence.

The Bill of Lading is an extraordinary document. It will be observed that it commences with "Shipped in good order and condition," and concludes with the words "Quality, condition and measure unknown"—certainly a queer anomaly. The shipper would have no protection against the careless handling of the cargo by the ship's crew, and the value of the Bill of Lading as a negotiable document would probably be impaired.

There are other objectionable features of more or less importance. Those enumerated show that the charter affords no protection to the shipper, and is completely at variance with the custom of the trade on this side of the Atlantic. The existing form of charter is much preferable, and with a few alterations, would best serve the interests of both the ship-owner and shipper.

---

Industries in the United States that require large quantities of good hickory are said to find it necessary to place their orders with the mills prior to the cutting of the timber, and the mill men are obliged to scour a great deal of territory in order to find stuff suitable for manufacturing purposes.

## DOYLE'S RULE ASSAILED.

THE Toronto Mail and Empire reconstructs into an editorial some statements made by Mr. Walter Beatty, M.P.P. for Leeds, touching the method employed for estimating the quantity of lumber in a saw log. The contention advanced is that the province is deprived of at least 20 per cent. of the revenue derivable from stumpage or timber dues, and that on the total log output of the decade from 1887 to 1896 the loss was $2,482,779. For the enlightenment of our readers we quote from the Mail and Empire:

"The lumber content of each log is ascertained by a method of calculation known as Doyle's rule. This rule, Mr. Beatty says, belittles the size of a log surprisingly—particularly a log whose diameter does not exceed 20 inches. For example, by the Doyle standard, a stick of timber 14½ inches in diameter is calculated as reducible to 83 feet of lumber. But, insists Mr. Beatty, let that same log be put through a saw mill and it will be found by the measurement of the actual lumber it is converted into to contain 120 feet, board measure. Therefore, 37 feet of it is exempt from timber dues."

The length of the log is apparently not taken into consideration in the above calculation; at least, as it is not given, that is the inference. Perhaps Mr. Beatty, in conjunction with the Mail and Empire, has some secret system of reckoning by which the length of the log becomes of no importance in arriving at results? And it may be that the time is drawing near when there will be no defects to be allowed for in the log, to reduce the quantity of merchantable timber. In any case, we welcome the advent of a new era in lumbering when it will be possible to obtain 120 feet of lumber while paying dues only on 83 feet of that amount. The Mail and Empire continues:

"Loss of revenue is not the only mischief that flows from the Doyle rule. It leads to the selection of the very hope of our forests as the victims of the woodman's axe. It falls short not on the large trees, but on the smaller ones—those described by Mr. Beatty as not exceeding 20 inches in diameter. On these sizes the lumbermen escape from 20 to 30 per cent. of the dues. They therefore have a motive for including as many lumber logs of small size as possible. * * * So far from acting on the report of its own Forestry Commission, which recommended that all trees of a diameter not exceeding 12 inches be inviolable, the government has put a premium upon the cutting of small sizes above all others.

Would any lumberman be foolish enough to cut trees of small diameter which would make but one log? We think not, as it would be impossible, after taking off the slab and saw kerf, to get more than the amount of the saw bill out of the timber. The small logs now taken out by the lumbermen are chiefly the tops of large trees. On small logs Doyle's rule scales less than Scribner's, while on large logs the reverse is the case. If Scribner's rule were adopted, all small and crooked logs cut from trees would be left in the woods, and the timber dues lost to the government. Thus the advantage of Doyle's rule to the province and to the country generally. On the whole, the rule is not in favor of the lumberman. We would be glad to learn of one saw mill in Ontario where the actual production of lumber in a season has exceeded to any extent the scale made by the government. The remark of our contemporary that two and one-half million dollars has gone into the pockets of lumbermen instead of into the provincial treasury is indeed amusing.

## EDITORIAL NOTES.

THE lumbermen of Ontario have a greater interest in the proposed construction of the Rainy River Railway from Port Arthur to Winnipeg than that which pertains to them as citizens of Canada. The lumber requirement of Manitoba and the Northwest is now considerable, and will continue to grow in volume for years to come. The one essential to placing Georgian Bay lumber on that market is cheaper carrying charges. This is likely to be assured by the completion of the Rainy River Railway, as lumber can then be shipped by vessel to Port Arthur, and from thence carried by rail to Winnipeg. A competing route with the Canadian Pacific Railway will have been provided, and lower rates may be expected to come as a natural consequence. It is learned that surveys of the route are now being made, and that construction will be commenced forthwith.

---

IT is rather surprising that more Canadian capital is not forthcoming for investment in pulp-making enterprises in this country. Virtually all the large pulp-producing plants in Canada to-day have been established by foreign capital. This should not be the case. Canadian money is being invested constantly in channels which, to say the least, do not offer as certain returns as a well managed pulp manufacturing establishment. Some pulp mill projects are on the tapis at the present time, the carrying out of which will depend, it seems, upon the financial assistance given by the Canadian people. Our capitalists should not be backward in advancing the necessary funds to develop an industry which promises to become one of the most important in the country. We must first display confidence ourselves before foreign assistance can consistently be asked for.

---

## THE FACTS CHANGED.

IN the case of Creighton vs. Pacific Coast Lumber Co., noticed in our November issue, we incorrectly made the statement that "in March last defendants agreed to sell to plaintiff a carload of clear cedar strips, etc." It should have been stated that the plaintiff claimed the above to be the case; defendants on the other hand submitted evidence to the effect that plaintiff had examined the lumber in the yard before purchasing and that the lumber was rejects, out of which all clear was supposed to have been picked. Judgment with costs has since been given by the court in favor of the defendant company.

---

The Imperial Oil Co., of Petrolea, Ont., have closed down their barrel factory, after an exceptionally busy season. It is probable that in future the company will use only oak staves, as the elm barrels do not give satisfaction.

The firm of James Miller & Company, lumber merchants, Notre Dame du Lac, Temiscouata county, Que., having been dissolved by the death of the late James Miller, Messrs. James Hayes and D. A. Huntley have sold their interests to Charles Miller, A. P. Barnhill and Alice P. Miller.

The question as to whether slow or rapid combustion is the most economical may forever remain in dispute as it is at the present time, bnt one thing is certain, and that is, that where the furnaces are large enough to allow the coal to be burned at a slow rate, there is very little smoke made; or in other words, if there is a plenty of boiler power, there will be but little smoke. As smoke is said to contain matter that should be burned in a furnace, a smoke chimney denotes a waste of coal, and from these facts we argue that a slow rate of combustion is economical and logical.

## HANDLING LARGE LOGS ON A SMALL MILL.

By S. C. MELLAN, in Wood-Worker.

IT is not my purpose to introduce any idea for the operation of the great saw mills of the land, and could every factory which saws its stock from the log be supplied with a band mill, there would be no occasion for this paper, with the accompanying diagrams. Wastefulness of any sort has always annoyed the writer, whether it appears in time or material, so that during several years' experience as a foreman it has been a question of continual study to prevent what possessed any evidence of loss in labor or stock.

In some mills which cut out dimension stock in considerable quantities, the log, for a first cut, is located so that a heavy slab, ranging from four to eight inches in the heaviest part, may be dropped off, while the remainder of the log is cut up into heavy pieces of similar size, as may seem best suited for convenience and economy. Logs sawed in such form are afterwards cut into short

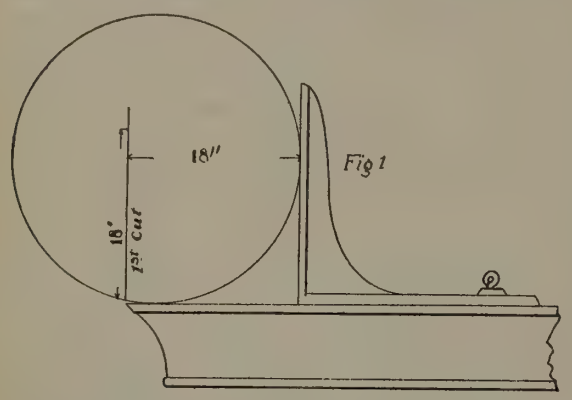

Fig 1

lengths and then can be handled by one man, being worked into light dimension stock on much thinner saws than those used in heavy mills, which, of course, saves an important quantity of the log.

In a factory where I was employed a few years since, a saw mill was added to the equipment, for the purpose of working up short logs, ranging in lengths of three to eight feet. It was thought that nothing larger than about 20 inch logs would be sawed on this mill, hence, reasoning on this basis, a saw 44 inches diameter was ordered with the mill. The mill behaved like a gentleman and the saw was just the thing for what had been expected, giving excellent service. Matters moved on so nicely that the buyer soon had logs in larger sizes coming into the yard, and instead of logs limited to 20 inches diameter, we had them ranging all the way to three feet in diameter.

As the historic street car can always find "room for one more," so this mill could handle something a little

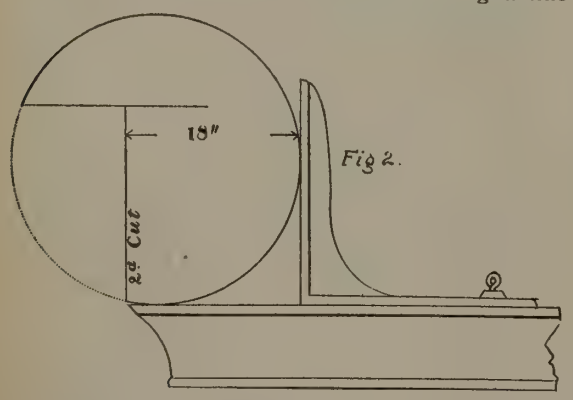

Fig 2.

larger, and many a large log was cut into bolt stock, as we shall see. Notwithstanding this increased size in logs naturally demanded a larger saw, the 44 inch one did the work, and that with no waste of material. Many a time has the writer seen a saw go through the side of a log attempting to take off a heavy slice, but the saw could not reach to the top of the log, and then wedges were driven in to split off what was not sawed, after which a deal of time must be spent to hew the split portion to an even surface with what cutting had been made by the saw, so the log could be canted down for another run.

This always appeared too wasteful. Our 44 inch saw would reach only 18 inches above the collars, which, of course, was the depth of the kerf, and when you only reach that distance on, say a 30 inch log, there is quite a space that the saw cannot get up to. We reckoned there was a better plan than to use wedges and axes, so, with a little hard thinking, we worked out a plan which saved the entire material and lessened the expense of working out our stock, without introducing a larger saw. The accompanying illustrations will correctly represent the method employed.

You will notice that the position of the head blocks remains the same, 18 inches from the saw, just the distance

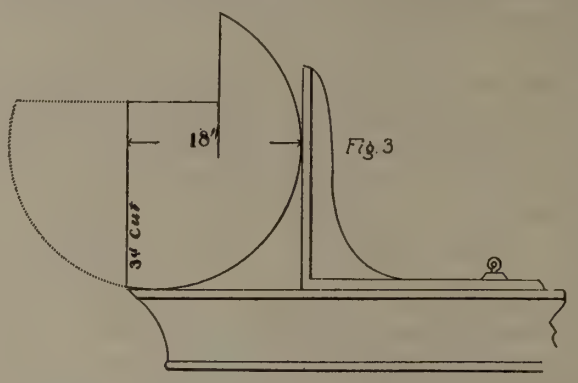

Fig 3

which the saw enters in the log, so that the only change necessary is to give the log a quarter roll for a second cut, another quarter roll for the third cut, and then in the fourth position it is dropped back to the location of Fig. 1, where we began sawing. By these simple operations the log was materially reduced in size without any loss of timber, there being no changing of the head blocks for the four cuts made. The dotted lines of each figure show the piece dropped off at each run of the saw, and, I think, will be clear to all who may be interested in the idea. In this manner we solved the problem of handling very heavy logs on a comparatively small mill, without destroying valuable stock and consuming unnecessary time. Where a log tapers it should be blocked away from the

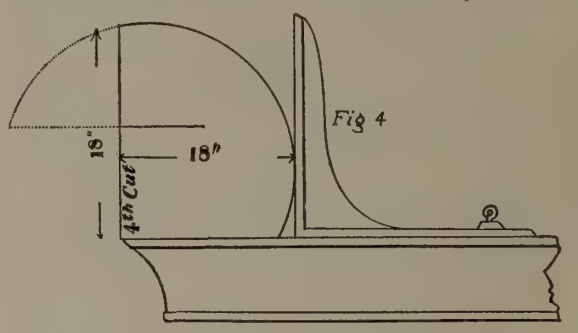

Fig 4

carriage head on the smallest end, so that the saw can at each change just reach to the line of the last cut made.

## WOOD CARBONIZATION.

IN the destructive distillation of wood, that is, ordinary charcoal burning, there are in the smoke or gas several valuable substances. These substances have been known for a long time and some have been partially recovered. The first process employed for the purpose was that for the production of tar from pine wood. Later, on the continent of Europe and in Scotland, wood was burned in retorts and the pyroligneous (that is, crude acetic acid), was made into acetate of lime. Of late years, however, this business has had a very great development in the United States, where the large amount of excellent hardwood forest in the natural gas regions, where no wood is used for fuel, has given a cheap raw material, making possible the export of acetate of lime and wood alcohol to Europe with profit.

At present there are two distinct processes used, called the kiln process and the retort process. In the kiln process the cordwood is put into a large brick or stone "bee-hive" kiln and burned in the ordinary manner for producing charcoal, but the smoke or gases do not escape into the air, but are drawn through a chimney into a series of condensers, where all the liquid products are condensed out, and the gas is burned under the boilers. The liquor condensed (amounting to 180 gallons for a cord of well seasoned dry wood), is led into tanks and the tar is separated out. This tar is re-distilled, producing oils and pitch. If only wood alcohol is to be made, the settled liquor is distilled and crude alcohol produced, and the residual pyroligneous acid is run to waste. If brown acetate of lime is to be made, the crude liquor is neutralized with lime before the alcohol is distilled off. If gray acetate of lime is to be produced, the crude liquor is all distilled and purified before neutralizing with lime. This method gives the best product, the gray acetate of lime containing from 82 per cent. to 86 per cent. of acetic acid, while the brown acetate of lime sometimes contains less than 60 per cent. of acid. The retort process differs from the kiln process of carbonizing in having the cordwood put into horizontal wrought-iron cylinders, and these are heated by a fire-place beneath them. In the kiln process, enough air is let into the kiln to burn a portion of the wood, and this heat serves to carbonize the rest. The retort process is superior to the kiln process in giving larger yields of valuable products, but the cost of installation and of working is greater.

The by-products in the liquors from the condensers are recovered the same way, whether produced by the kiln or retort process. In all the processes the alcohol is re-distilled, purified and treated chemically, and brought up to a strength of 95 per cent., before being put on the market. The products of this industry are used in the arts for various purposes. Wood alcohol, or methyl alcohol, is like grain alcohol in many physical properties, but is poisonous. It is used for making spirit varnishes for burning and dissolving various gums, and by the government for making methylated spirit. Acetate of lime is used for the production of acetic acid, which is the acid of vinegar, and is diluted and flavored and sold for this purpose in Russia and other European countries.

The Standard Chemical Co., Limited, first introduced the retort system into Canada about a year and a half ago at Fenelon Falls, Ont. Previous to this, the only works in Canada turning out these wood products were located at Deseronto, and owned by the Rathbun Company, which owned the patents for the Burrel kiln process. H. O. Chute, superintendent of the company, was employed by the Standard Chemical Co. to erect a retort plant at Fenelon Falls, which has been in operation since last fall. When the Deseronto Iron Co. decided to locate at Deseronto, assuring a market for the charcoal, the Standard Chemical Co. acquired the rights of the Burrel patent, owned by the Rathbun Company, and decided to enlarge the plant by putting in retorts. This plant will have the largest single bench of retorts in the world, and many new features of construction are being introduced, which allow of a more economical working and handling of all products by machinery. We are indebted to H. O. Chute, superintendent of the Standard Chemical Co., for the information contained in this article.—Canadian Engineer.

The clothespin factories in Michigan and Pennsylvania turn out about 3,000,000 pins per day. Pennsylvannia leads in their manufacture, nearly a million a day being made in the town of Kane, McKean county, and vicinity. Beech wood is used, and the factories employ hundreds of boys and girls.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., DECEMBER 7, 1898 No. 46.

## CANADA LUMBERMAN

PUBLISHED BY

**The C. H. Mortimer Publishing Co'y of Toronto, Limited**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**LUMBERMAN'S**

VEST-POCKET

**INSPECTION BOOK**

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

Toronto, Canada
C. H. MORTIMER, Publisher
1895

THE above is a fac smilie of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

**LUMBER WANTED.**

BASSWOOD, 500,000 FEET ONE INCH STUFF. TAYLOR, SCOTT & Co., Toronto.

WANTED.

MILLS THAT CAN FURNISH DIMENSION Stock in Ash and Oak for Furniture and other Goods. Box 75, CANADA LUMBERMAN.

WANTED.

120,000 FEET 10 x 12 AND 12 x 12 WHITE Pine Timber, 20 to 33 feet long. THOS. MYLES' SONS, Hamilton, Ont.

WANTED.

1" x 10" OR 12", 12, 14 AND 16 FEET HEMLOCK, dry, all square both ends; by the car; must be good. D. P. CAMPBELL, Box 71, Thedford, Ont.

LUMBER WANTED.

ELM, ASH, BIRCH AND BASSWOOD (LAST season's cut) in any quantities. We are also open to contract for this season's cut. UNION FURNITURE CO, OF WINGHAM, LIMITED, Wingham, Ont.

FOR SALE.

SAW MILL COMPLETE, CAPACITY 25 TO 30 M. ft. per day, with three block carriage, 60-inch saw mandrill and pu leys, double edger, trimmer and slash table, log jack, with about 150 feet chain, 40 h p. engine, 50 h.p. boiler, pulleys and belting, 3 lumber cars, 2 carts and a quantity of boom chain, all in good order. Apply, Box 68, Allandale.

### SALE OF OTTAWA VALLEY TIMBER LIMITS.

The auction sale of timber limits belonging to the insolvent estate of William Mason & Sons drew a large attendance of lumbermen to the Russell House at Ottawa on November 30th. The two large parcels offered for sale were disposed of at good prices, but for the smaller ones and for the mill property of the firm there were no bidders, and consequently no sale. Mr. W. H. Lewis was the auctioneer.

Berths No. 388 and 389, on Big Lake, River Dumoine, containing 100 square miles, were purchased by Mr. E. B. Eddy, for $35,000. The limit contains considerable spruce, and is valuable for pulp purposes. A depot, farm and provisions on the limits, valued at $10,000, were also sold to Mr. Eddy for $10,000, less 25 per cent.

Parcel No. 2, containing berths Nos. 343, 344, 205, 233 (or berth A) and berth 234 (or berth B) situated on River Coulonge, in the province of Quebec, containing 245 square miles, was sold to Mr. E. B. Eddy for $29,600. The farm and depot on these limits were sold to Mr. Eddy for $9,000, less 25 per cent. discount.

Berths in the townships of Brougham and Bagot, on the Madawaska, and in Papineau and Cameron, on the Ottawa, near Mattawa, were withdrawn, owing to low bidding.

The Mason mill at Bayswater was put under the hammer, but no bids were offered, and it will therefore remain in the hands of the Bank of Ottawa, under whose auspices the sale was conducted.

---

The schooner Beaver has been chartered to load lumber at Shulie, N.S., for Barbados.

The bark W. W. McLaughlan has been ordered to Jordan, N.S., to load lumber for a South American port.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

Lumber manufacturers and dealers in Ontario are not complaining of lack of trade. While they would welcome a greater number of orders, they are disposed to look upon the business of the season now drawing to a close as satisfactory. The volume of lumber movement during November was larger than in the corresponding month last year, and from present indications the record for December will show a similar result. Notwithstanding that navigation is closed, considerable pine lumber is moving by rail to local points and to the Eastern States, and the tendency of prices is towards an advance. It is probable, however, that the late activity in shipping has been due to the anxiety to avoid the winter freight rates, and that the closing weeks of the year will witness a falling off in trade. In the Ottawa valley negotiations are under way for the purchase of the coming season's cut of the large mills, and it is believed that several stocks will be secured by the same shippers as formerly, and at almost the same prices. In the hardwood districts efforts are being made to secure a large crop of logs. The farmers and jobbers are being offered higher prices than last year, and it is certain that, with favorable logging conditions, more than an average quantity of hardwood timber will be secured by the mills.

#### QUEBEC AND NEW BRUNSWICK.

Navigation from the St. Lawrence has now closed, and quietness prevails in shipping circles and in the lumber trade generally. Figures of the export of lumber from Montreal show that the quantity shipped this season was, approximately, 300,000,000 feet, which is about 20,000,000 feet less than in the season of 1897. The following figures give the respective export of the various shippers: Dobell, Beckett & Co., 76,924,116 feet; W. & J. Sharples, 62,488,502 feet; Watson & Todd, 44,819,842 feet; Robert Cox & Co., 39,627,140 feet; McArthur Bros., 35,595,538 feet; J. Burstall & Co., 30,802,571 feet; E. H. Lemay, 5,122,000 feet. It is understood that contracting for next season has so far been entered into only very moderately. There is no doubt, however, but that the usual quantity will be placed on foreign account. In the maritime provinces the situation has not changed materially, the most inquiry being for cedar shingles. Limited operations are being carried on in the woods, and the production of lumber next season is likely to be somewhat below the average quantity. Nevertheless, a number of lumbermen are carrying over logs from this season, and should the market revive they will be in a position to increase their production to some extent.

#### UNITED STATES.

The reports from the lumber markets of the United States tell of increased confidence. In the Western States recent storms checked consumption, but as lumber is wanted for immediate use, a revival of demand is looked for. The Minneapolis stocks are 50,000,000 feet less than they were at the close of the sawing season last year, which feature has had the effect of maintaining higher prices. The average stocks at northern mill points are somewhat smaller than they were one year ago, and as the generally prosperous condition of the country at large is likely to result in a healthy demand for lumber next year, holders of stock are firm in their asking prices. In the east a considerable volume of lumber is moving, and dealers at Buffalo, Tonawanda and other wholesale points are convinced that their supply will be inadequate for the winter and early spring trade. The most spirited demand is for low grade stock for box-making. The stock of lumber suitable for this purpose is now greatly reduced, and it is probable that box manufacturers will be compelled to buy better grades in order to obtain sufficient material to last until the new cut is ready for the market. The hardwood market continues to attract much attention in view of the scarcity of stock. The supply of dry lumber at the mills has either been shipped or is in second hands, and a large part of the stock to be cut for months ahead has been placed under contract. The small production during the winter months will be taken as rapidly as manufactured, so that the present eagerness to secure lumber will at least extend well into the spring of 1899. Soft and rock elm, birch, maple and black ash cannot be located in any quantity, while basswood, which is in larger stock, is being purchased by box makers. The production of hardwood logs this winter in the northern districts will no doubt be large, but it is generally believed that there is no danger of an overstock. While prices may weaken slightly next spring, it is not anticipated that there will be any marked reduction. The eastern spruce market has improved to a moderate extent, frames now being quoted at $14.

FOREIGN.

In the British market the tendency of lumber prices generally is upwards. This is due to the steady consumption and to the fact that the import season has closed. In spruce there has been a marked improvement and a general advance at all leading centres. At Cardiff and Manchester the advance is from 10s to 15s per standard. Spruce deals are again attracting greater attention on the east coast, and it is probable that some good-sized contracts will be entered into for next year's delivery. There were received at Glasgow this year from New Brunswick and Nova Scotia ports, a total of 54,800 loads of deals and about 20,000 loads of birch logs and planks, as against 53,000 loads af deals and 10,000 loads of birch last year. At Liverpool prices are also hardening, and there is every prospect of a good demand during the winter, so that high prices are likely to be asked for early shipments next year. At London good pine is selling freely. At the late public sales the stocks offered have consisted chiefly of common and inferior qualities, which are now well cleared off. It is noteworthy that the market is so firm at this season of the year, as increased activity is not usually looked for until after the holidays. Some uncertainty exists as to the price which first-open-water shipments will command. Very little new business has so far been placed, and for some reason importers appear to be holding off. We learn of one large contract of spruce for a Lancashire firm, to be shipped from Saguenay, Que.

STOCKS AND PRICES.

The schooner Nimbus sailed last week from Annapolis, N. S., for Rosario, with 755,478 feet of lumber.

The M. Brennen & Sons Company, of Huntsville, Ont., are buying quantities of pne, spruce and hardwood logs.

Herbert Taylor, of Cookshire, Que., has been given a contract to furnish 6,000 cords of pulp wood to the Cookshire Mill Company.

J. D. McArthur, of Winnipeg, Man., has sent a large gang of men to his timber limit on the Bird's Tail creek. His cut of logs this winter will be 3,000,000 feet.

This winter only 2,000,000 feet of logs will be cut on West river, at Sheet Harbor, N.S., compared with 9,000,000 feet last year. No logs will be taken out on the East river.

James Harnish, of Deep Cove, N.S., has just sold 6,000 acres of timber land in Lunenburg county to W. H. Murray and John Hamilton, of St. John, N.B., for the price of $20,000.

J. A. Christie, of Brandon, Man., has purchased from John B. McArthur, of Winnipeg, the old McLaren-Shields timber limit in north-western Manitoba. The logs will be taken to Mr. Christie's mill at Brandon for manufacture.

The C. Beck Manufacturing Company, of Penetanguishene, Ont., have five large camps in the woods this winter. They expect to secure a large stock of logs, and in all probability their mills will be kept running constantly next season.

At a recent auction sale held by Hodson, Mabbs & Co., London, Eng., Canadian goods realized the following prices: Ex Wildcroft, from Montreal, 3-11 1st bright white pine, $17. Ex Kirriemoor, from Quebec, 12-16, 3x9, 3rd quality spruce, £7; 10-13, 3 x 7 and 8, £6 3s 6d; 11-16, 3 x 6, £6 5s; 11-14, 3 x 7-12, 4th quality spruce, £6 12s 7d; 9-14, 3 x 5-11, £5 15s; 10-16, 3 x 5-12, £5 17s 6d.

The Kirby-Carpenter Company's three mills at Menominee, Mich., closed down last week, having cut upwards of 90,000,000 feet of lumber. The company is operating five logging camps this winter, and will put in from 12,000,000 to 15,000,000 feet of logs. Besides these camps jobbers will get out for the company about 65,000,000 feet of logs.

A rumor has been current that the Rat Portage Lumber Company intended building a new saw mill at Winnipeg. This report is now confirmed by the manager, Mr. D. C. Cameron, who makes the following statement: "If the Winnipeg and South-Eastern Railway be completed next year to Rainy Lake, I will advise my company to establish a large log cutting and lumber industry in Winnipeg, and have secured an option on certain property in Point Douglas, east of Louise bridge. We will build a mill to employ at least three hundred men, and one that will cut from 20,000,000 to 30,000,000 feet each season. This will supply the city of Winnipeg and district and points along the line of the Northern Pacific Railway. Points where we do business along the Canadian Pacific Railway in the province and the Territories, as far west as we go, will be provided for by the mill at Rat Portage."

BUFFALO AND TONAWANDA.

[Correspondence of the CANADA LUMBERMAN.]

There is much improvement in the lumber trade, all branches combining in reports of better prices and a better demand than the late setting in of winter would be supposed to warrant. If the up-turn of this branch of the trade is real and continuous, it means a great deal, as lumber has the name of feeling any change last of all the industries. We are generally under the impression that the long-awaited prosperity is at hand, and lumber is doing what it can to make this a certainty.

The activity in car building is one of the features of the improvement. All of the car shops have started up with such vim that the price of lumber that is used in them has gone up materially. Some of the dealers report an advance of $3 in yellow pine car sills, and other lumber used for this manufacture has risen also.

The lake trade in lumber has continued much later than usual, and the fact that the port of Buffalo received 27,000,000 feet of lumber and 25,000,000 shingles during November, which is often a slack month in this branch of the lake trade, is sufficient proof that dealers are at last convinced that it is going to pay to buy lumber to hold. The improved demand of late will reduce the stocks of pine, both in Buffalo and Tonawanda, so that neither port will have any more than an average stock, if it does that. Tonawanda has not received nearly as much as it sometimes does, and such big firms as Smith, Fassett & Co. report sales of late heavy enough to reduce their stocks very materially. Buffalo, which is a light shipper of lumber by canal, sent east 5,200,000 feet in November, which is about a boat load a day.

But for the giving out of the big Black Rock yards of Arthur Hill & Co. and the Holland & Emery Company, there would have been more lumber stocked in Buffalo for the winter than usual, for several of the up-town firms have more than they had one year ago. The Arthur Hill yard has now practically gone out of existence, all of the lumber having been sold sometime ago, and the Holland yard has not laid in much stock. It was the severe falling-off of the custom planing mill trade of these two yards that brought the Plummer mill to extremities, and drove it into bankruptcy.

The box makers are the most active members of the wood-working trade, and most of them are reporting an increase of custom at a time when it is common to reduce force and wait for spring business. There is so much demand for boxes that some of the mills are still obliged to turn away orders, and none of them are slack or likely to be right away. But for the advance of all sorts of box lumber there would be good profit in the business, but the fact is that so many concerns have gone into the making of boxes that profits were at one time next to nothing.

I find that there is an uneasy feeling in the air on account of the expected scarcity of all sorts of pine lumber before long. It is already a fact that hardwood is so difficult to keep in stock that it is practically sold as soon as it is bought, and something of the sort is looked for in pine. Only from the south is the sentiment against the reduction of the tariff on lumber at all unanimous. Many of the northern dealers who were so eager to shut out Canadian lumber are now more than willing to see it come in again. But the south sees in it a strong competitor of the woods peculiar to that section, and it will fight free trade with all its might.

There is a good supply of Pacific coast shingles laid in for the winter, considering the scarcity of all shingles of late, and much effort has been made to add to the supply of pine. Though the entire stock cannot be called large, it appears to be larger than it has been, and the price is fairly good.

The general all-round demand for hardwoods continues, and the opening of the south-west, though late on account of the continuation of yellow fever quarantine, will soon add to the scant stocks in that direction. There is no poplar of account to be had yet, and the demand for it is so good that it will be a long time before it is plenty again. All regular hardwoods are scarce, and will remain so right along now. The supply is too light for any of them to become really plentiful.

T. Sullivan & Co. are sticking close to ash and elm, with additions of special lots of other hardwoods that happen to come their way. They reported a month ago that they had doubled the sales of 1897.

There is a stir in the hemlock trade. Dealers are of the opinion that this lumber will be higher soon, and counsel holding off unless top prices can be obtained. The price of hemlock is so low that it has to be handled with care—that is, not handled at all between the producer and the consumer unless it is strictly necessary. There is considerable Michigan hemlock in the trade, but the Pennsylvania producers have got the handling of it down so fine, and know so well what the east wants, that western hemlock stays out of competition for the most part. Besides, the west is its own market, and is really paying more accordingly for lumber than the east is. The Atlantic seaboard has been very slow till of late. Just now there is a diversion on account of the preparation of the government to buy lumber in large quantities to ship to Cuba. It looks as though this move would alone be enough to advance the prices, especially as they are so strong to begin with.

BUFFALO, December 5th, 1898. J.C.

PACIFIC COAST LUMBERMEN IN CONFERENCE.

An important private meeting of the representative lumbermen of the Pacific coast, including the British Columbia mills, was held recently at San Francisco, the object being in connection with the contemplated alliance of interests in order to secure better prices for lumber. What brought the subject of a combination to a head again and resulted in the conference being held was the scarcity of logs. It has been recognized for a long time that the day would come when the supply of logs within easy reach of the coast must fail, but no one seemed to realize that it would come all at once; yet this is just what has happened. The logs on the coast are scarce, and now they have to be cut so far from the water that railways will have to be put in to bring things back to their normal condition of supply. The price of logs has advanced to $6 and $7, and they are scarce even at that figure. The result is that some of the mills have had to pay pretty heavy demurrage in some cases for vessels waiting to load. Other mills—the Chemainus, for example—have had a supply on hand from the old prices, and therefore can hold their own at the present price of lumber, which is nominally $9. This condition of things, however, will not likely last for more than five or six months, by which time logging railways will be in operation and the price of logs will fall. Even then, however, it is confidently expected by lumbermen that the price of lumber will not drop again to the old figure, which left no profit at all to the mills, they only cutting to fill orders, so as to hold their customers till better times came to the industry. It is understood that at the conference most of the mills on the Sound and in British Columbia were represented.

Mr. Buckner's planing mill at Orrville, Ont., was totally destroyed by fire recently, at a loss of $2,000. There was no insurance.

BUSINESS NOTES.

J. H. Dansereau & Co., lumber dealers, Montreal, have registered partnership.

Dame E. M. Thomas has registered proprietress of the business of E. F. Keene, lumber dealer, Sherbrooke, Que.

E. E. Sasseville & Company, lumber jobbers and traders in the province of Quebec, are reported to be financially embarrassed.

The stock of lumber held by J. M. Hall, Winnipeg, Man., has been taken over by the Rat Portage Lumber Company, and the business will probably be closed out.

The assignment is reported of Lefebvre, Mantha & Laperriere, sash and door manufacturers, Montreal, with liabilities about $40,000. A meeting of creditors will be held on 9th inst.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts. per 100 lbs. Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc.. to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R., writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct, Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M few and over, $2.50; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 50c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $2.75; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4 25; under 50 M feet, $4.50; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3 00; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4 75; lath, 250 M pieces, 60c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.25; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 65c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.: lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 10c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

# THE NEWS.

—John Schade has erected a shingle mill at Magnetawan, Ont.

—John Aush has started a saw and shingle mill at Lunenburg, Ont.

—T. W. Grey, saw mill, Nelson, B.C., is offering his business for sale.

—Mr. Guthrie has purchased the steam saw mill at Selby's Pond, Que.

—W. W. Doherty's saw mill at Campbellton, N.B., has been rebuilt, and is now in operation.

—It is probable that Dobell, Beckett & Co., timber exporters, will establish an office at St. John, N. B.

—The William Hamilton Mfg. Co., of Peterboro', Ont., are installing machinery in a saw mill at Fernie, B.C.

—George McPherson, of Keewatin, Ont., was awarded a certificate as lumber culler at a recent examination.

—It is announced that a new saw mill, with a capacity of 25,000 feet per day, will be built at Revelstoke, B.C.

—Sergeant Bros., of Chatham Head, N. B., have sold their mill, together with tenement houses, to Timothy Lynch.

—The Oro Mining & Milling Company have built a saw mill at Oro, Ont., in connection with their mining operations.

—A. F. Bentley has removed from Five Islands, N. S., to St. Martins, N.B., where he has engaged in lumbering operations.

—J. A. Calhoun, of Savannah, Georgia, has supplied considerable lumber for a new elevator now being built at St. John, N.B.

—Mr. Madder is making preparations for building lumber sheds at Douglas, Man., where he will establish a retail lumber yard.

—A company has purchased the soft timber in the swamps west of Exeter, Ont., and intend erecting a stave mill in the vicinity.

—Arniel & Company are erecting a sash and door factory and planing mill in connection with their lumber yard at Port Stanley, Ont.

—The Hepworth Manufacturing Company's building at Hepworth Station, Ont., is expected to be completed by the first of January next.

—The Rat Portage Lumber Co. have been supplying the Canadian Pacific Railway with grain car doors at the rate of one car load per week.

—Cressman & Stauffer, who recently sold their cigar box factory and saw mill at Baden, Ont., have purchased a saw mill property in Muskoka.

—Chew Bros., of Midland, Ont., have purchased the old mill property at Dollartown, Ont., and are about to erect a large box factory thereon.

—The works of the Gardner Tool Co., at Sherbrooke, Que., in liquidation, have been sold to William Farwell, manager of the Eastern Townships Bank, for $15,659.

—Robert Watt is building a new saw mill at Wiarton, Ont., which, when completed, will be one of the best in that district. The frame is now in course of construction.

—Maitland, Rixon & Co., of Owen Sound, Ont., have made arrangements for the building of a new tug, to replace the Adam Ainslie, which was recently destroyed by fire.

—Boyd & Company's saw mill at Bobcaygeon, Ont., closed down last month. The men employed, to the number of sixty, left for the firm's limits in Glamorgan township.

—McLaurin & McLaren, of East Templeton, Que., have just installed two 80 h.p. boilers in their mill. These were supplied by Bannerman & Findlater, boiler makers, of Ottawa, Ont.

—The shingle mill of S. Rainey, at Severn Bridge, Ont., has been purchased by Smith & Thompson, of Orillia, Ont., who have taken it to Barrie to manufacture railway ties and shingles.

—It is stated that two gentlemen are negotiating for the purchase of the saw mill and factory at Trout Creek, Ont., owned by William Burke, with a view to improving the plant and operating it.

—Austin Bowen, found guilty of conspiracy to rob Mr. McLaughlin, paymaster at Gillies Bros'. saw mills, Braeside, Ont., was recently sentenced at Ottawa to seven years in the penitentiary.

—T. Sims & Co., of St. John, N.B., have purchased the old saw mill, spool and box factory at Hardington, N. B., together with 700 acres of timber lands, formerly owned and operated by L. P. Hayden.

—Samuel Freeze, of Doaktown, N. B., who returned last summer from the Klondike, has erected a mill to manufacture furniture stock for tables, chairs, organ cases, etc., for shipment to Great Britain.

—C. & I. and George D. Prescott, of Hopewell Hill, N. B., have made arrangements with an English company to establish a box factory to manufacture glove and other boxes for export. The new factory is now in course of construction.

—F. S. & W. E. Roop & Co. are rebuilding their woodworking factory at Middleton, N.S., assistance having been granted by the municipality. The establishment will consist of a main building, three stories high, 41 × 91 feet, brick engine room 20 × 35 feet, and a dry kiln and storage room 34 × 35 feet, all to be equipped with latest machinery, and to be in operation by February 1st, 1899.

—Several artisans of Trenton, Ont., have organized the Trenton Lumber Cutting & Manufacturing Company, to manufacture lumber, boxes, furniture, etc. The undertaking is launched upon a co-operative principle, and is stated to be a labor-employing venture.

—It is reported that an English syndicate is negotiating for the purchase of the factory of the Perfection Hoop & Veneer Co., at Eugenia, Ont., with a view to manufacturing wood specialties for export to Great Britain. Further developments are looked for in the near future.

—A Winnipeg exchange states that it is now an assured fact that two of the large saw mills on the Lake of the Woods will be removed to that city upon the completion of the South-Eastern Railway to Rainy River. Negotiations for a site for one of these mills are now said to be in progress.

—The Hiltz Company, of New Ross, N.S., which commenced operations last February, have sawn between five and six hundred thousand feet of lumber, two and three hundred thousand of staves, and about two hundred thousand of shingles. They intend going in on a larger scale this winter.

—The King Lumber Company, Limited, are erecting a wood-working factory at Chipman, Queen's County, N.B. The machinery will consist of planer, matcher, moulder, trimmer and cutting-up saw, and in the near future it is contemplated to add machinery for the manufacture of doors and sashes.

—The Nova Scotia Lumber Co., of Sherbrooke, N. S., have completed one of the best gang and rotary saw mills in the Dominion. It is fitted with modern improvements, including saw dust, bark and refuse conveyor. The conveyor carries the waste wood 400 feet from the mill, where it is consumed by fire. The gang saw has a capacity of 100,000 feet per day, and the rotary between 25,000 and 30,000 feet per day. Upwards of 100 men are employed.

—Fred. W. Eddy, late of West Lucan, Mass., has taken up a large tract of land at the head of North-East Margaree River, N.S. On this property there is a large amount of valuable timber, which he proposes to take down the river to Margaree Harbor, where he is erecting a saw, shingle and stave mill. The machinery for the above is being supplied by the Robb Engineering Company, Limited, of Amherst, N.S., and will include a 50 h. p. boiler and engine as the power plant.

—At the recent convention of the Women's Christian Temperance Union, held in Ottawa, a report was submitted by Mr. Lecky, a lumbermen's missionary, who has been kept travelling among the northern lumber camps. This report stated that the evil of intemperance was working great havoc among the men employed in the lumber woods. A further report stated that some of the supplies sent into the lumber camps by the Temperance Union had been sold to the men by the agents of the company.

—The Sarnia Salt Company, Limited, of Sarnia, Ont., has applied for permission to increase its capital stock from $20,000 to $100,000, the intention being to resume operations on a larger scale than formerly. This development of the Canadian salt wells no doubt bears some relation to the prohibition of the export of Canadian logs to Michigan. The Michigan salt wells, as is generally known, use the refuse from the lumber mills as fuel, and when this cheap fuel is cut off the cost of operating the wells will be greatly increased, thus affording a material advantage to the Canadian wells.

—Mr. James A. Smart, Deputy Minister of the Interior, in company with Mr. E. F. Stephenson, Dominion Crown Timber Agent at Winnipeg, made a trip last month to Moose Mountain, in the Northwest Territory. An inspection of the timber there showed that there was a large quantity of good serviceable wood in the district. Mr. Smart believes that the preservation of this belt is absolutely necessary, and next year steps will be taken to insure its protection. The above gentlemen also visited the Turtle Mountain timber reserve, and expressed themselves as well pleased with the fire guard which has been made from the north side of the timber belt to the lake at the summit.

—On October 27th last the lumber, shingle and lath mill of J. D. Shier, at Bracebridge, Ont., was completely destroyed by fire. In some quarters an impression seems to prevail that the fire was caused by a hot box. This is not in accordance with the facts. While the cause of the fire is unknown, it certainly did not originate from a hot box, as the mill had been running perfectly cool, and particularly this season; in fact, we learn that no trouble has been experienced with hot boxes for three years. The band mill was also giving the best of satisfaction right up to the time of the fire. It is possible that the fire was due to some disarrangement in the electric wires. Mr. Shier is now engaged on the erection of a new mill, which will be up-to-date and completed in time for an early start next spring. His planing and shingle mill is running full capacity.

—Much interest is taken in a lumbermen's lien case recently tried before Judge Wilson at Fredericton, N.B. A number of lumbermen had claims against certain logs taken out last winter by A. Cushing & Sons, of St. John. These logs were hung up on the Oromocto river, and last summer lien claims were filed against them. These claims were allowed by the judge, who ordered that the logs be sold to satisfy the same. The case was appealed to the Supreme Court, which reversed the decision and held that the logs could not be claimed while in transit. The Oromocto river has now risen sufficiently to permit the logs to be floated, and recently Cushing & Sons sent a crew of men to raft the logs ready for towing. At this juncture Sheriff Holden, of Sunbury, served an attachment upon Cushing's workmen on behalf of the lien holders. This, however, was disregarded, and the logs are now on their way to St. John. What the next step will be is being awaited with keen interest.

## CASUALTIES.

—Robert Grant, employed in Mickle, Dyment & Co.'s camp, five miles from Dorset, Ont., had his leg broken last month.

—J. Ray was engaged piling logs on a rollway at Whitney, Ont., when one of the timbers rolled back on him, crushing his leg severely.

—While working in the lumber woods at Nashwaak, N. B., for Elias White, George Clark had his leg broken by a log rolling upon it.

—W. Sheridan, employed in the Gilmour camp at Canoe Lake, Ont., had his leg broken by a falling tree, and was taken to the Toronto General Hospital.

—David Tyand, head sawyer in T. L. Pardo's saw mill at Blenheim, Ont., was working in the vicinity of the boiler when a steam pipe burst, the flying iron breaking his leg in two places. It is not expected that his injuries will result fatally.

—James Hillier was killed while working in a saw mill in the township of Dawn, near Chatham, Ont. By some means a board fell across the rapid revolving circular saw, and was hurled with terriffic force against the deceased, killing him instantly.

## PERSONAL.

The death occurred last month of Mr. L. W. Ross, bookkeeper for M. M. Boyd & Co., Bobcaygeon, Ont.

Mr. G. Harley White, of the Alma Lumber & Shipbuilding Co., of Sussex, N.B., was recently married in Montreal.

Mr. George H. Perley, of the late firm of Perley & Pattee, lumbermen, Ottawa, sailed with his family on November 5th for a tour of the European continent.

At Galt, Ont., Mr. Raymond F. Shurly, eldest son of Mr. C. J. Shurly, of the firm of Shurly & Dietrich, saw manufacturers, was recently married to Miss Gilholm.

Mr. Henry Pedwell, of Thornbury, Ont., has been in England for the past couple of months, investigating the prospects of finding a profitable market for Canadian hardwood lumber.

The death of J. N. Draper occurred at New Westminster, B.C., on October 22nd last. Deceased was born at Woodstock, N.B, in the year 1834, and removed to British Columbia twenty-five years later. After remaining there a short time he went to Puget Sound, and engaged in the lumber business, returning to New Westminster in 1877. Since that time he has been associated with Messrs. Ewen & Co.

In our last issue reference to the death of Mr. Stephen Jarrett was inadvertently omitted. On October 7th he succumbed to typhoid fever at his home in Deseronto, Ont. Deceased was well known in lumber circles in Ontario. Coming to this country from England when fourteen years old, he spent some five years in a printing office, but fifteen years ago turned his attention to the lumber business. His first employment was as clerk with Christie, Kerr & Co., of Toronto, and subsequently he was associated with Messrs. Tennant & Co., the Ontario Lumber Co., J. A. McBean, Robert Thompson & Co, Donogh & Oliver, Davidson & Hay, and the late Toronto Wood & Shingle Co., being on the road for the last five named, as either salesman or buyer and shipper. For the last five years of his life he was employed by the Rathbun Company, of Deseronto, as inspector and foreman.

A prominent lumberman of the maritime provinces, in the person of Mr. James Miller, died on November 4th. The primary cause of his death was a severe cold which he contracted a short time ago while attending to his lumbering interests in the Temiscouata region. Deceased had lately completed arrangements with Mr. D. A. Huntley, of Parrsboro, N.S., to carry on extensive lumbering operations in Quebec, having secured valuable timber limits on the Temiscouata Lake. The erection of a mill was to have been commenced immediately. Mr. Miller was a son of the late senior member of the firm of Miller & Woodman, one of the largest saw mill owners and operators of St. John, N. B. He was born at Hollis, Maine, in the year 1855, was educated at St. John, Sackville and Sheffield, N.B., and then went into the lumbering business. His first venture was in 1881, at Economy, N. S., where he operated successfully for about ten years. He then removed to St. Mary's River and established a business there, which he continued until negotiations were opened for conducting operations at Temiscouata.

Mr. Madison Williams, Port Perry, Ont., reports the following recent sales: E. Beare, Greenbank, Ont., large globe case and flume; T. A. McLean, Charlottetown, P.E.I., 30½" Leffel; N. McLean, Newville, Ont., Lane set works; Monastery du Bon Pastam, Pare Laval, Que., three 61" and one 35" Vulcans, with two 36" Vulcans to follow; J. H. Stanford, Chester, N.S., one 30½" Vulcan, with gears, gauge roll and Green mountain dogs; The Succession du Masson Terrebonere, Que., one Lane double circular 30 ft. carriage and rope feed.

## OTTAWA LETTER.

[Correspondence of the CANADA LUMBERMAN.]

THE chief topic of conversation of late among the lumbermen of the Ottawa valley has been the financial embarrassment of Messrs. William Mason & Sons. This firm have been regarded as one of the most progressive in the district, and it is a matter of regret that arrangements could not be made to tide them over the present difficulty. The sale of their limits yesterday brought together a number of prominent lumbermen, including Messrs. Alexander Fraser, J. R. Booth, E. B. Eddy, R. H. Conroy, Alex. Lumsden, M.P.P., H. K. Egan, C. B. Powell, M.P.P, Hon. George Bryson, Alex. Barnet, J. B. Fraser, and others. The only purchaser was Mr. E. B. Eddy, who secured 100 square miles on Big Lake, River du Moine, and 245 miles on the River Coulonge, in the province of Quebec. Several other berths, as well as the sawmill at Bayswater, were withdrawn. The sale was held under the auspices of the Bank of Toronto.

The E. B. Eddy Company, of Hull, have adopted a unique system of continuous labor, the result being attained by a change concerning the dinner hour. The company give the employees a free dinner, served hot, and in the factory. Half the employees go to dinner say, at twelve o'clock, and the other half at half-past twelve, taking only half an hour for lunch. In consideration of this the employees are given a half holiday on Saturday. The company have recently added new machinery, which brings the output up to 30,000,000 matches per day. We understand that the machine recently completed by the Victoria Foundry Company for Merritt Brothers & Co., of St. John, N.B., had a capacity of 25,000,000 matches per day of ten hours.

The experiments with furnaces for the manufacture of calcium carbide, which are being carried on at the mills of W. C. Edwards & Company, continue to attract attention. Mr. J. G. Gardner, of Baltimore, Md., was in the city recently in connection with the scheme, and it is said that if the plant is not established here, he will offer Mr. V. L. Emerson special inducements for the establishment of such a manufactory on the American side.

The Ontario crown timber office, which for many years has been situated in the building at the corner of Kent and Queen streets, has been removed to the Sun Life building.

Mr. J. M. Portrais, representative of the Northern Pacific Lumber Company, Limited, is at present in British Columbia. His mission is understood to be in connection with the opening of the Ross-McLaren mills on the Fraser river, in that province. One drawback to the operation of these mills has been the report which gained currency that the Fraser river was not navigable for vessels of any size. This has now been contradicted by the investigation of the coast pilots, made during their recent visit to the Fraser river.

It has been the privilege of your correspondent to read the memorial which has been forwarded by the Ottawa valley lumbermen to the British commissioners at Washington. The document contains some strong arguments against the contentions of the United States lumbermen. At the outset, facts are given which show that the lumber shipped from Canada to the United States is of an average quality. Then follows some figures showing the imports from Canada by the United States, and vice versa. A denial is given to the statement that lumber is produced in Canada more cheaply than in the United States. The claim of the American lumbermen that dams, slides, booms, and river improvements generally for the purpose of lumbering operations, are constructed in Canada by the government, is met by the statement that in every case where improvements are made slidage dues are charged the lumbermen, sufficing to cover interest on cost of construction and maintenance, and in addition yielding a revenue, in some instances, as high as 15 per cent. Fully ninety per cent. of the improvements, however, are constructed by the lumbermen themselves, at their own cost. The amount of capital required for equivalent production in the two countries is next dealt with, the figures showing that the cost of producing white pine lumber in Canada is $2 per M greater than in Michigan. The memorial concludes with some pointed arguments in favor of free lumber.

OTTAWA, December 1st, 1898.

## BRITISH COLUMBIA LETTER.

[Correspondence of the CANADA LUMBERMAN.]

THE destruction by fire of the Hastings saw mill, owned by the British Columbia Mills, Timber and Trading Company, is regarded as a serious loss to this city, more especially as there is some probability that the mill will not be rebuilt. The Hastings mill was the pioneer saw mill on the mainland, having been erected in the year 1862. Shortly after being built it passed into the possession of a firm named Dickson, DeWolf & Heatley, which firm for many years managed the establishment, San Francisco at that time being the principal market for its output. Mr. Heatley afterwards became almost sole owner, and some years ago sold the mill to the Hastings Saw Mill Co., Limited, which was afterwards merged with the British Columbia Mills, Timber and Trading Company, Limited, who are still the owners thereof. Nearly three hundred men were employed around the establishment, and the company's pay roll amounted to $12,000 per month.

Mr. John Hendry, manager of the Hastings saw mill, returned last month from Australia, Mr. Sisson, who accompanied him, remaining there. While Mr. Hendry naturally feels indisposed to make public all the information gathered regarding trade prospects in Australia, we learn that he feels somewhat encouraged by his trip, and that an effort will be made to increase the business of his company in that colony.

A change has been made by the government in connection with its policy of disposing of public lands. A notice is gazetted to the effect that hereafter no lands or timber will be sold or disposed by the government except under special circumstances. Persons desirous of purchasing lands must apply to the department, showing any special reason why they should be allowed to purchase, before any expense is incurred.

The Victoria-Yukon Company, whose mills at Lake Bennett, in the Yukon district, did a large trade last season, intend making extensive improvements in order to be better equipped for next season's business. The management believe that in future there will be a still greater demand for freight barges. There are also a number of steamers to be built, and no doubt quite a town will grow up around Bennett.

When the Beaver saw mills are completed they will be one of the finest in the province. W. G. Neilson, M.P.P., is manager of this establishment.

Mr. F. B. Waterous, of the Waterous Engine Works, Brantford, Ont., has recently been on the coast. He appointed Mr. H. B. Gilmour, formerly with the C.P.R., as agent for this province, and we have no doubt that Mr. Gilmour's extensive acquaintance, coupled with his sterling qualities, will secure a large business for the company.

The British Columbia Mills, Timber and Trading Company will probably open up one of the largest timber limits on the north coast. It is situated 135 miles up the coast, near Bear Island creek, and was recently prospected by Mr. J. St. Clair. Mr. St. Clair estimates that it will yield 80,000 feet of lumber to the acre. In connection with the logging operations, it will be necessary to construct a short line of railway from the coast in seven miles to the first of the chain of lakes that run from end to end of the limit. The logs will be floated down these lakes and loaded on trains, which will haul them to the shore line.

VANCOUVER, B.C., November 22, 1898.

## THE OTTAWA SAW WORKS.

A SMALL fire occurred in the band-saw department on the second story of the Ottawa Saw Works, Ottawa, on the morning of Thanksgiving Day, causing damage to stock and building to extent of about $2,000; fully insured. Fortunately the fire was not extensive enough to interfere with the running of the works or any of the departments, and the company inform us that they are in a position to fill orders as promptly as ever. They also purpose making some additions in their facilities for making saws before the end of the year, so as to be prepared for the usual rush of trade during winter and spring months.

The Knight Bros Co., of Burks Falls, Ont., who make a specialty of kiln-dried birch flooring and sheeting, are having their factory fitted throughout with steam heaters. They also contemplate putting in a large engine during the coming winter.

## GOOD ADVICE TO BOILER ATTENDANTS.

THE Manchester, Eng., Steam Users' Association has issued the following hints to boiler attendants :

WATER LEVEL.—Before lighting fires see that there is sufficient water in the boiler. Test the water gauges frequently and keep the water level steady.

BLOW-OFF COCKS.—Before lighting fires be sure that the blow-off cocks are closed and not leaking. Occasionally feel if the blow-off waste pipes are hot. Blow off from bottom before starting the engine. Sediment has then settled in the elbow pipe. Blow off the scum before stopping the engines, but only when the water level is at the correct height. At such times most of the scum has collected in the troughs.

LIGHTING FIRES.—Sudden changes of temperature may produce fractures or start leakages. Therefore never raise steam hurriedly. The top and bottom of a boiler should grow warm together. If convenient, fill the boiler with warm water through the economizer. If the boiler water is cold, allow fully six hours for raising steam. If pressed for time, fill the boiler to the top of the water gauge, fire slowly, and keep the safety valve open until steam blows off freely. After closing the safety valve, blow out the bottom cold water till the working level is reached. The pressure may now be raised more quickly.

SMOKE PREVENTION.—Smoke and imperfect combustion are caused by an insufficient air supply or by premature cooling of the flames. Therefore after coaling, when the fires are black, admit air either at the door or through the split bridge. It is less wasteful to admit too much air than too little. With smoky boilers or when hard pressed, keep the fires thin and even. Fire steadily. Don't coal all furnaces at once. Coal each furnace on one side at a time.

EMPTYING BOILERS.—Do not empty boiler while steam is up.

OVERHAULING, CLEANING AND INSPECTION.—Clean the boiler monthly or oftener ; remove the scale while soft, if possible while emptying the boiler. Sweep the soot off the boiler plates and clean the flues every three months, as well as on the occasion of the annual inspection. All leakages should be stopped, any cause of dampness in the setting should be removed, corrosion should be arrested. The fusible plugs should be cleaned on the fire side and water side once a month, and the fusible metal should be renewed once a year at the time of the annual inspection. All cocks should be kept oiled, and, unless asbestos-packed, they should be overhauled once every month. These cocks, the feed valves, steam stop valves, and all safety valves, should be overhauled annually on the occasion of the inspector's visit.

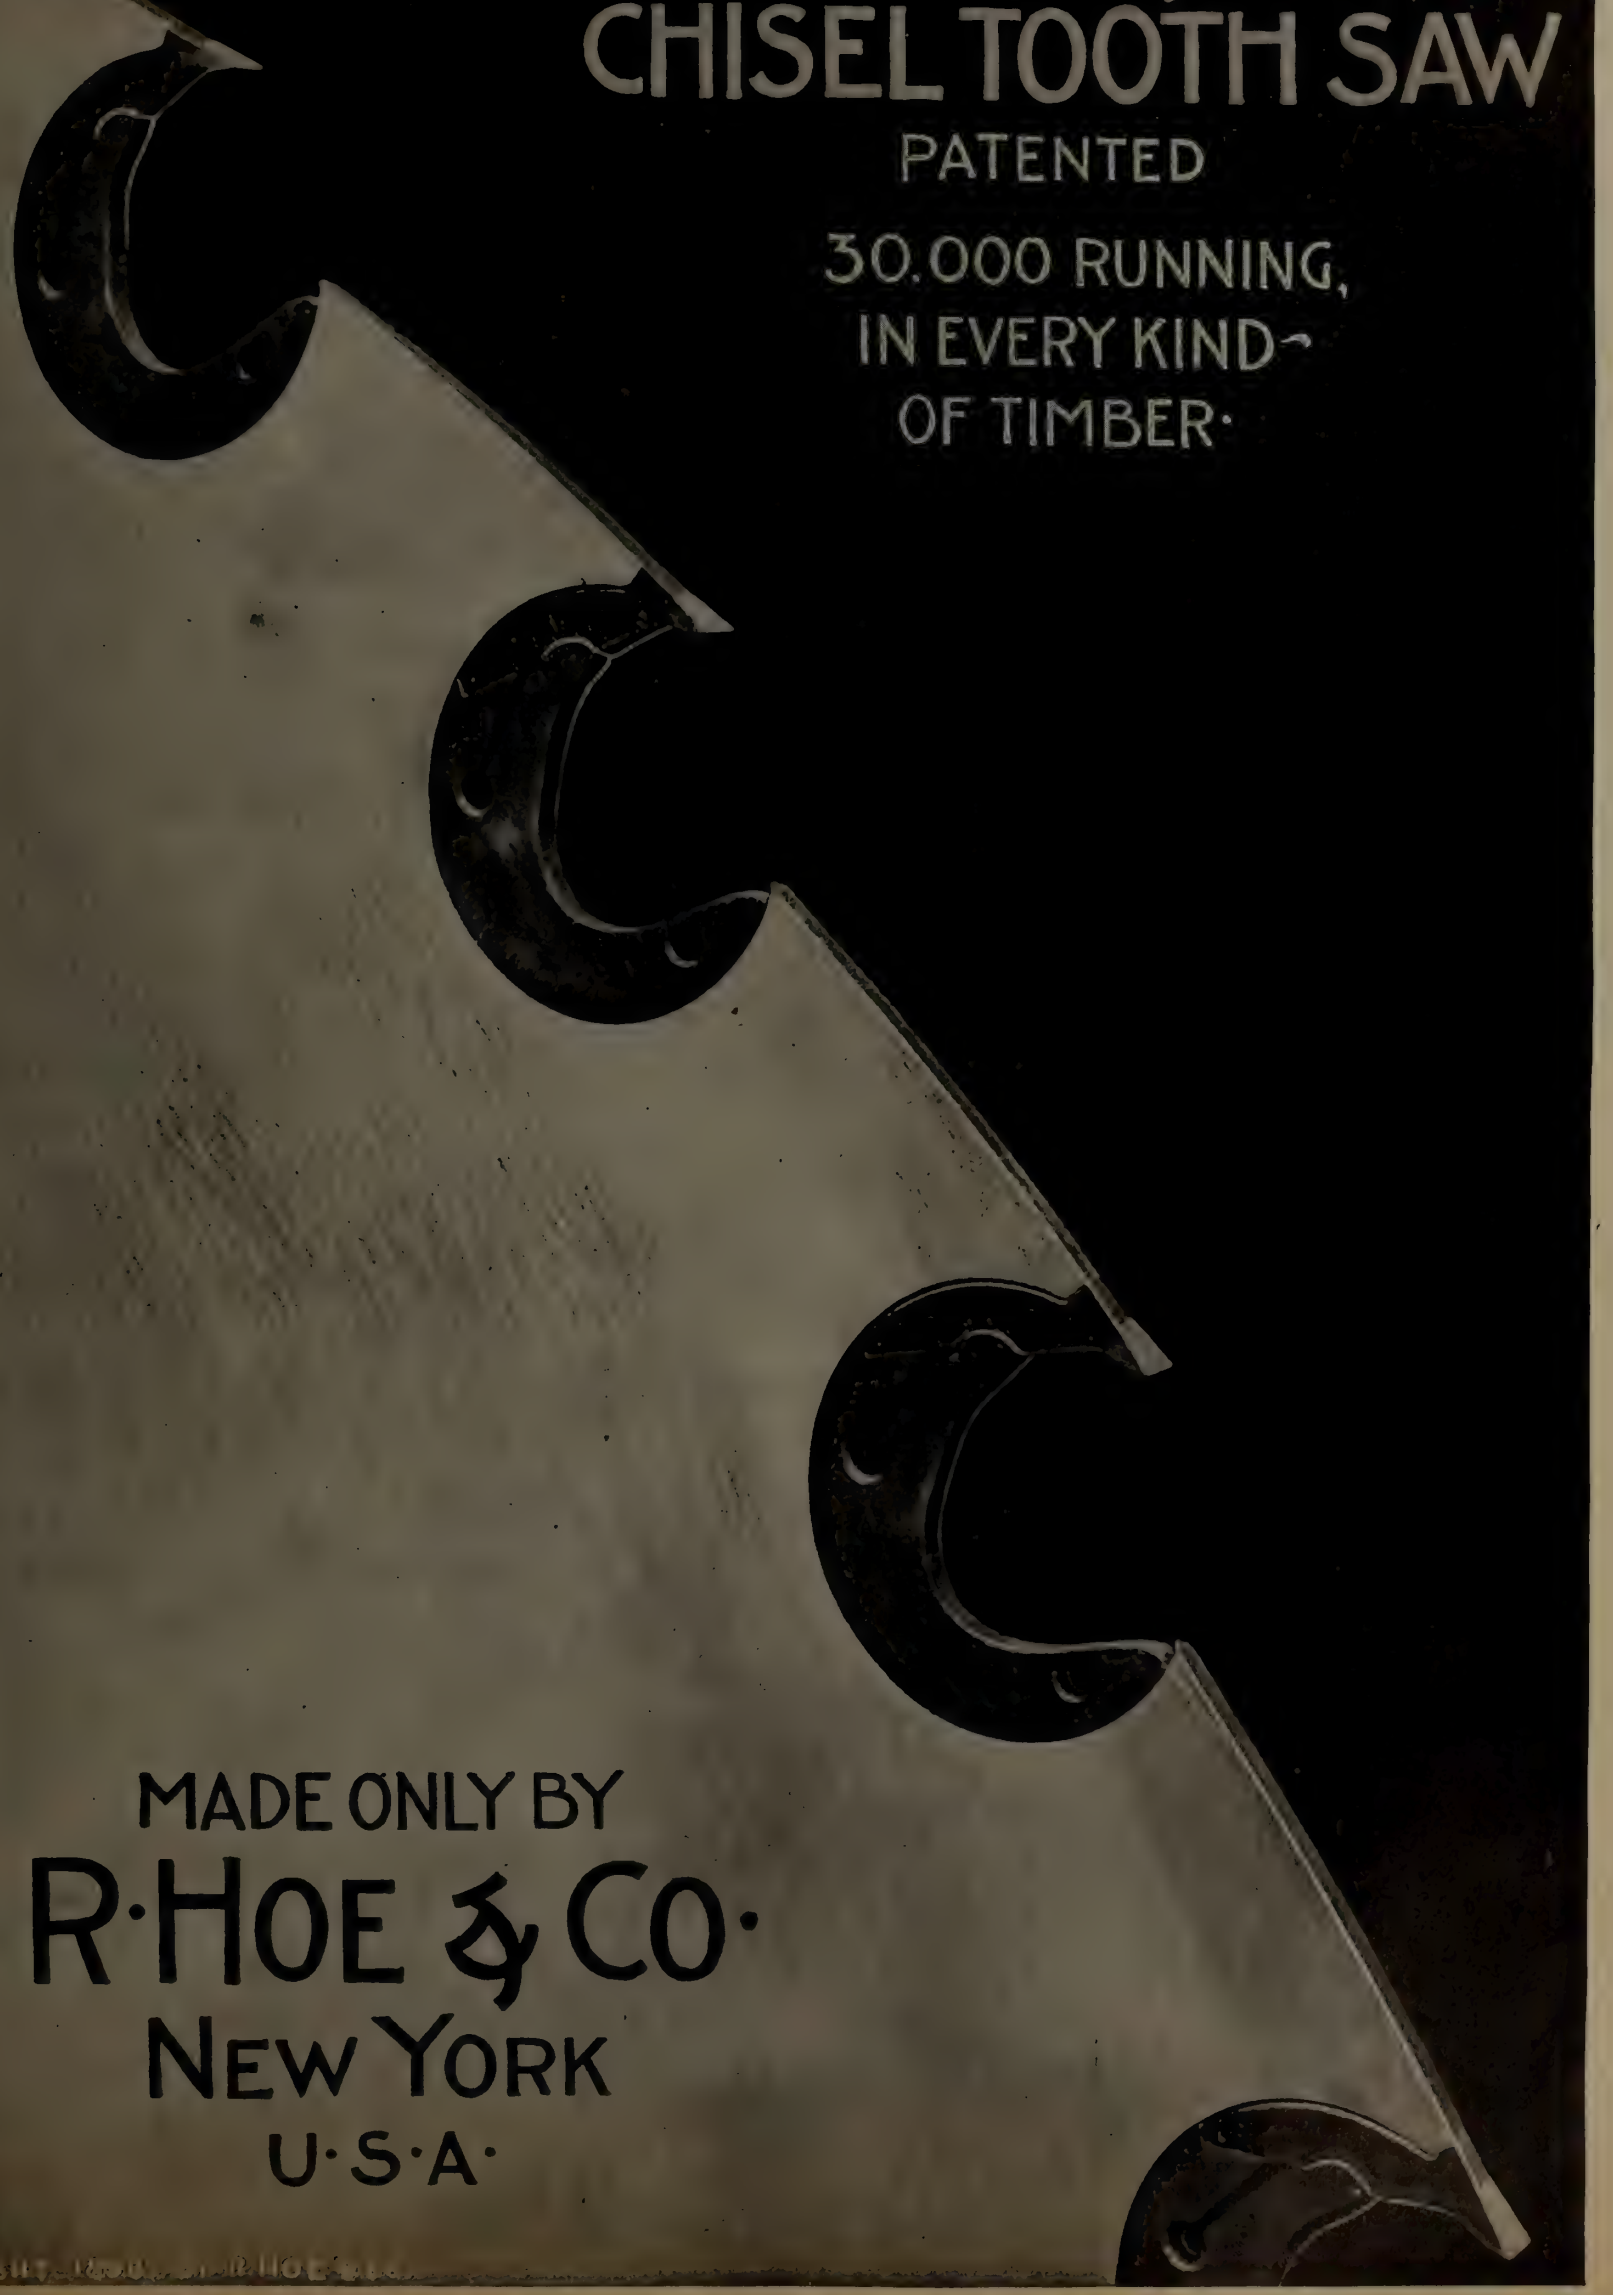
MANHOLES.—Before opening the man-holes, ease the safety valve so as to be quite sure that there is no pressure in the boiler. Before entering a boiler secure the steam valves and blow off cocks.

SAFETY VALVES AND LOW WATER ALARMS.—Never overload or tamper with safety valves or with low water alarms. Ease or test them regularly every day. Be sure that they are in working order. If they will not work properly, reduce the steam pressure and then report to the manager.

# R·HOE & CO'S CHISEL TOOTH SAW

PATENTED

30.000 RUNNING, IN EVERY KIND OF TIMBER·



MADE ONLY BY

R·HOE & CO·

NEW YORK

U·S·A·

COPYRIGHT, 1898, BY R. HOE & CO.

R. HOE & CO.'S NEW YORK WORKS

PRINCIPAL OFFICE: 504-520 GRAND STREET, NEW YORK, U.S.A.
Works on Grand, Broome, Sheriff and Columbia Streets.

The recent Addition to our New York works, shown above, gives a combined floor area of 480,000 square feet, or about twelve acres, in New York and London. These enormous Plants are devoted to the manufacture of Printing Presses, from the Octuple Web Perfecting Press, with a running speed of 96,000 8-page Papers per Hour, down to the Washington Hand Press, and the Celebrated....

# PATENT CHISEL TOOTH SAW

illustrated on the opposite side of this page, of which 30,000 have been put into Successful Operation in all parts of the Civilized World. Many thousands of these Saws are operating in Canadian mills, from the Atlantic to the Pacific, and their sale to English mill-owners is rapidly extending. This is unquestionably the Best Saw manufactured; Unequalled for Frozen Timber—an Economical, Efficient Tool. **Catalogues and Net Prices on Application.**

MANSFIELD STREET, BOROUGH ROAD, LONDON, ENGLAND.

# WOOD PULP DEPARTMENT

## THE EXPORT OF PULP WOOD.

THE probability is that the Quebec Legislature will open another session early in January. This fact accounts for the interest which is now being shown in the question of the export of pulp wood. It is understood that influential interests have requested the Cabinet to take some steps to protect the spruce forests of the province, and to assist the development of the pulp iudustry in Canada. The provincial government has no power to impose an export duty on pulp wood, and the federal government has taken no action. Therefore, it has been suggested that this difficulty can be overcome by imposing a stumpage tax of say $4 per cord upon all wood cut in the province for pulp, and to give a rebate of $3 or $3.50 per cord upon all manufactured into pulp in the province. This would virtually prohibit the export of pulp wood from the province into the United States, and would no doubt be ruinous to those American pulp factories that are dependent upon Quebec for their raw product.

Whether or not any action will be taken by the government is a question in doubt. Those opposed to the imposition of heavy stumpage upon pulp wood intended for export, argue that it would interfere with the large trade done by individual farmers in cutting this wood upon their own lands for export. Against this it is claimed that the stumpage would only apply to lumber cut on Crown timber limits, and that a little courage in the matter on the part of the local government would lead to an industrial revolution in the province of Quebec, forcing the location there of many pulp mills, and probably paper mills as well, that are now situated on the other side of the line and furnishing employment to American labor.

Quebec's strong point is this, that the amount of spruce available in the United States is decidedly limited and will soon be practically exhausted, while in Quebec, the greatest spruce province of the Dominion, the supply is virtually unlimited.

A significant feature of the situation is the rapid absorption of the spruce lands on the St. Lawrence river. The International Paper Company of the United States, which began purchasing only a few years ago, now owns 2,500 square miles. The Laurentide Pulp Company, of Grand Mere, and two other companies own between them 3,500 square miles. The Shawenegan Water & Power Company bought 700 square miles at the sale of limits in Quebec recently, paying over $50,000. These and other facts, such as the acquisition of large tracts in Ontario by the Petawawa Lumber, Pulp & Paper Company and by the Sturgeon Falls Pulp Company, show that paper manufacturers are convinced that the supply of available spruce in the United States is almost exhausted, and that the paper mills of that country must soon be dependent upon us for their raw material. The International Paper Company alone has a capital of $36,000,000, and the effect of such a transfer of industrial activity is almost incalculable.

## PULP NOTES.

Grenville, Que., is said to offer a good location for a pulp mill.

The pulp mill at Sturgeon Falls, Ont., resumed operations early in November.

Hamelin & Ayers, of Lachute, Que., are experiencing a large demand for their felts for pulp and paper mills.

The Sault Ste. Marie Pulp & Paper Co., according to reports, exported over 10,000 tons of pulp to the United States since October 1st.

A rumor is current that a number of Truro capitalists have in view the establishment of a pulp mill at Farm Lake, Colchester county.

The first shipment of pulp from the pulp mills at Sturgeon Falls, Ont., under the new management, was made on Wednesday, Nov. 30th last.

The Dominion Pulp Company, of Chatham, N.B., has closed a contract with E. Leonard & Sons, of London, Ont., through their St. John branch, for one of the largest digestors ever made in Canada, this being the fourth digestor to be supplied by this firm.

The project for a pulp mill at Baie St. Paul, Que., on the St. Lawrence river, is reported to be making good headway. Cross & Ewing are said to be making arrangements to secure a water power at Lime Ridge, near Marbleton, Que., for the purpose of manufacturing pulp.

At the next session of the Newfoundland legislature, application will be made to incorporate the Newfoundland Bleached Pulp Co., with a capital of $2,000,000. It is proposed to exploit wood pulp, and probably coal, lime, stone and pyrites. The Messrs. Reid are prime movers in this important concern.

The manager of the Dominion Pulp Mills Company, Chatham, N.B., announces himself as strongly in favor of a regular line of steamers between St. John, N.B., and London, England, the year round. He states that his company are in a position to supply four car loads of pulp every week for shipment to London.

It is rumored that an English syndicate have in view the erection of a large pulp mill at Alma Island, near Tadousac, Que. The company purpose expending about $2,000,000, and is said to have made an offer to the local government to manufacture 450 tons of pulp per day, provided the free use of certain water powers is accorded.

According to figures just compiled, the export of pulp wood to the United States increased from $677,221 in the fiscal year ending June 30th, 1897, to $876,690 in 1898. As showing the marked increase in the export of pulp wood in recent years, it is stated that in 1890 pulp wood was shipped from Canada only to the value of $50,197, and up to 1896 the exports had not reached the half-million mark.

In connection with the proposal of Mr. George Taylor, of Toronto, to build a pulp mill at Seven Islands, on the north coast of the St. Lawrence, it is learned that the river in some parts is 400 feet wide and 10 feet deep, and that there is a waterfall of 112 feet, giving an immense power. Mr. Taylor has purchased 76 square miles of spruce timber limits in the vicinity, and intends to proceed immediately with the erection of the mill.

An important decision has just been rendered by Judge Routhier in the matter of the Cascapedia Pulp & Lumber Co., of Cascapedia, Que., in liquidation. Mr. Alfred Lemieux, of Quebec, had been appointed liquidator to the company, and as such obtained in May last leave from the Court to sell the property. The sale was advertised to take place on the 14th of July last, but on that date, the bidding not being considered satisfactory, the sale was postponed, and on the following day the Court again granted Mr. Lemieux's petition to sell the property on the 17th of August last. On the latter date the sale took place, and Mr. McLellan purchased the property for $20,700. Mr. J. M. Fortier was a shareholder and creditor of the company when the latter assigned, and took action in September last against Messrs. Lemieux and McLellan to have the sale to the latter annulled, on the ground that the notices required by law were not given previous to the sale, and that the property was worth much more than the price obtained. Notwithstanding this action, the liquidator notified the shareholders and creditors that the property had been sold, and published notices to that effect in the Quebec Official Gazette. Mr. Fortier then presented a petition to the Court, praying that all proceedings upon the ratification of the deed of sale be suspended until a decision was obtained in his case against Messrs. Lemieux and McLellan, and Judge Routhier granted the petition and ordered that all proceedings respecting the ratification of the sale to Mr. McLellan be suspended, as requested.

## APPRECIATES THE PULP DEPARTMENT.

IN renewing his subscription to the CANADA LUMBERMAN, Mr. B. L. O'Hara, of Quebec, writes: "The Pulp Department, which seems to have become a regular feature of the LUMBERMAN, is most interesting, and I hope in the course of the next few months to see many good articles on the different stages of the manufacture of pulp, material used, power required, etc. Considerable fir (peeled) is shipped from this province each year."

Readers of THE LUMBERMAN who contemplate enlarging their mill, or purchasing new machinery of any kind, are asked to advise us of their requirements. Such information is greatly appreciated.

**FOR SALE**

24 sets good Lumbering Sleighs. Width, 5 feet 2 inches over all; runners, 4 x 6 x 7 feet; bunk, 8 feet; spring steel shoeing. Will be sold cheap. Apply to THE WHALEY LUMBER CO., Limited, Huntsville, Ont.

**The LUMBERMAN is issued fifty-two times a year for $1.00. Can you afford to do without it?**

**CITY BRASS FOUNDRY - HAMILTON, ONT.**

Messrs. Adams, Burns & Company, of Bathurst, N.B., are investigating the prospects for a pulp mill at that place.

Messrs. Abbott & Company, London, Eng., and Olive & Company, Manchester, Eng., are looking into the question of importing spruce pulp wood from Canada.

It is understood that the Commissioner of Lands and Forests for Quebec has ordered the collection of information bearing upon the existence of water supply and spruce forests, with a view to aiding the establishment of pulp manufacturing industries. This will no doubt prove of great value to capitalists seeking fields for investment.

Mr. Charles R. Loring, of Livermore Falls, Me., the expert engaged to report on the outlook for a pulp mill at Woodstock, N.B., has given his conclusions to the Board of Trade of that town. He expresses regret that more water power is not available. The wood supply, he states, is plentiful, but for the mechanical process of pulp manufacture an enormous water supply is required. The mechanical process is simply a grinding up of all parts of the wood into pulp, giving a ton of pulp for a ton of wood, while the sulphite process only yielded 1,100 pounds to t ton. He recommends the establishment of a sulph mill, particularly on account of the cheapness of the r product. He estimates that a sulphite mill of 40 to capacity would cost, including building and machine about $75,000, while a mechanical pulp mill of 40 to capacity would cost $100,000, and each would requi about the same number of hands to operate it. Mess Hugh Hay and H. Paxton Baird, members of the Boa of Trade, have expressed themselves as well satisfied wi the report.

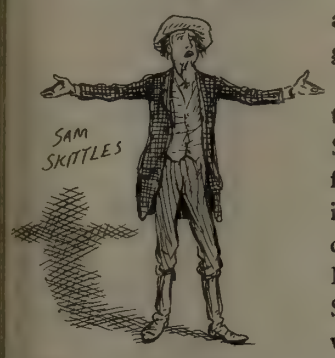
## LIGHT ON THE LUMBER QUESTION.

BY "JOSIAH THE TRUTHFUL."

"YES, sir, we're a-goin' to expand—we've busted eour narrer limits same's my growin' boy Jake hes busted his last year's coat—and we're a-goin' to spread out, and take a hand in the gin'ral affairs of the world, 'long with the other great powers, and don't you forgit it. W'y, I see by the paper t'other day thet deown to Washin'ton they're a-tawkin' beout buildin' a bang-up palace for the president's residence, jest as immense every way as what Queen Victorey or the King of Roossia lives in, and turn the old White House into a work-shop. That's right, too. We got to git up and put on some style, to let the hull of creation un'stand that the cry of expansion hes got here. Ef we don't hev things in reg'lar sure enough royalty style, sose eour President kin set 'em up and intertain in a manner becomin' to the leadin' nation on top of earth, w'y, we haint in it, that's all. It's eour distiny, and everything goes!"



So ran the peroration of Mr. Sam Skittle's speech before the assemblage in the corner grocery of Squashville, Mass., on a recent Saturday night. It was generally conceded that Sam was the greatest orator in the village, and as a man with a good command of language is always a centre of more or less influence, Mr. Skittles had a considerable following, notwithstanding that in other respects he did not count for much, being fonder of talking than of working, and as a consequence, having a distinctly low rating in the local Bradstreet's credit list. The sentiments quoted above, with which he concluded a lengthy harangue delivered with much effective gesticulation, were received with great applause by the miscellaneous audience gathered about the stove. But Demosthenes himself did not carry all the Athenians, and there was one unconvinced auditor in Sam's presence.

"But haint it a-goin' to cost like thunder?" piped up the tremulous voice of old Deacon Smithers. "I see it in the Bosting paper thet we'll hev to pay 'beout twice as much es them folks in Yurrup does to keep up army and navy and all like of that. I don't believe in it. I stick to old George Washin'ton. We'd orter go on jes' mindin' our own business; that's how I look at it."

The growl, a dissent which greeted this view, brought Sam to his feet once more—he had taken a seat on a convenient biscuit-box at the close of his oratorial effort.

"I haint got nothin' agien George Washington on ginril principles," he began. "He was a right good man, and done fust rate fer them fur back times, but the world is a-movin', and this kentry hes growed bigger'n George Washin'ton ever hed any idea it would, so his harness don't fit things es they is to-day. Yes, gentlemen, the hour has struck, and the word is 'expansion'. These United States is a-growin'. We've took in Haywayee and Port Ricco and the Phillipines es a part of the Union, and we're agoin' to foller our destiny ef we hev to annex colonies all round the airth!"

During this supplementary burst an additional auditor had arrived, in the person of Sol. Wheatcroft, and gladsome anticipations of a lively argumentative scrimmage at once filled the breast of the collected idlers.

"What hev you got to say to them idees, Sol?" asked Deacon Smithers, as soon as Mr. Skittles had finished his period.

"Expansion is all right," replied Sol, taking his pipe from his mouth, "so long as it haint got no Dingley nonsense in it."

"Dingley nonsense!" echoed Mr. Skittles, greatly shocked, "what do you mean?"

"I mean what they call protection," promptly replied Sol. "I don't believe in takin' in a lot of foreign parts and puttin' a high fence round 'em to keep out everybody but ourselves."

"Well, I swan?" exclaimed Mr. Skittles, "I didn't expect to live fer to hear Sol. Wheatcroft go back on his kentry like that—I really didn't. I spose you will next argy thet we'd dorter low them Canady fellers that is down to Washin'ton to send lumber in here free es they're askin' fer."

This fine stroke called out a roar of applause.

"As to that pint," replied Sol, with a guileful air of reconsideration, "of course I draw the line somewheres, and I guess we can't stand free lumber over here, not jes yit, anyhow."

"Well, I'm glad you got some sense left, after all, Solomon," said Sam, approvingly.

"I calklate I hev, neighbors, and I try to make use of it, es fur's I kin," responded Sol. "My sense tells me, fer instance, that when we fetch lumber over from Canady we do it jes es a neighborly act to the Canucks, jest to oblige 'em, and as a matter of Christian kindness, but es they don't belong to the union, we haint bound to treat 'em that way less we've a mind to. So, of course, when they send some ef their leadin' fellers to Washin'ton to ask us to let 'em send lumber in here right along free of duty, we haint a-goin' to do no sech a thing, 'cus that would be 'bleegin' us to ack neighborly whether we liked it or not. Haint that sound sense?"

There was a general murmur of assent.

"You're buildin' a new dwellin' house jes now, I believe, Elder Simpson?" resumed Sol, turning to a weary looking citizen on his left.

"Not yet—I'm a thinkin' of it, but lumber's too dear. I'm waitin' fer a fall in the price," replied the Elder.

"Oh," commented Sol, "lumber's too dear jes' at present, the Elder says. I s'pose he wants white pine, and that is dear 'cus it got to be brung 'way down from Min'soty and Michigan an' round thar', and its pooty scarce even thar', I bleeve."

"Scarce?" put in the grocery man. "W'y, I've allus ben told that's a thick wooded kentry up yender."

"It haint now, though I guess it wus at fust," replied Sol. "You see we've went right along cuttin' it deown and sawin' it up fer years, 'thout ever takin' eny thought fer the future or plantin' more trees like the Canady fellers hev, and now in Michigan we've got 'bout to the lingth of our rope. Fer years past the mills up thar has bin kep' agoin' on logs brung over from Canady, up 'round Georgain Bay, but that can't be did no more as the government up in Ontario hes stopped it by passin' a law to make everybody that cuts logs over thar' man'facture the lumber on the spot."

"W'y, blame my cats!" interjected Sam Skittles," I never knowed all this afore. Do you mean to say we hev run out of lumber ourselves, and yit won't let Canady send it in to s'ply our wants?"

"Not 'thout $2 a thousand duty on to it—that's the Dingley tariff, you know. And thet's why lumber is so dear thet the elder can't go on with thet buildin' of his, and I guess there's thousands more folks all through New England in jes' the same fix—would like to build if they could git cheaper lumber."

"I'm beginnin' to think thay hain't so much of a statesman 'bout Dingley es I had s'posed," remarked Sam.

"Hold up, there, neighbor!" cried Sol; "it's agin the law to raise eny question 'bout the wisdom of Dingley. He's a true patrit, and is bound to protect his kentry agin free lumber—not like them Canady statesmen thet lets lumber go into Manitoby free fer the benefit of farmers and so forth up thar—they buy 'bout 20 million feet from eour side of the line every year. But Dingley don't b'lieve in such foolishness. He can't see why the United States should suffer from free lumber jes' to oblige a foreign kentry."

"I'm willin' to stand some sufferin' along thet line fer one," said Elder Simpson.

"You be?" cried Sol, turning upon the little man with simulated scorn—"What! air you a

traitor, too? You mean to say that the duty of $2 a thousand on lumber is not in the interests of the United States, es Dingley says?"

"Well," replied the Elder, "I don' want to say a word agin Dingley, but I don't see what good it does me to keep lumber out when I want to use it; so fer es I kin see the $2 per thousand of duty only adds that much to the price, and I want it cheaper."

"But I tell you, repeated Sol, rising to a warmth of eloquence, "Dingley says the Uinted States would lose by free lumber, and you kin see that's Gospel truth when you come to understand what the United States is, es Dingley looks at it. It is a community of people thet owns lumber mills and timber limits, and earns a honest livlihood by furnishin' lumber to folks thet wants to build. You kin see that if we took off the duty and let Canady lumber come in, the United States would lose trade or hev to bring down the price and so lose profits."

"But, jes' hold your hosses a minute, Solomon," piped up Deacon Smithers, "I don't agree to it thet the United States is jes' a passel of lumber mill fellers—I guess thase a few millions of us folks that don't make and sell lumber, but hes to buy it. Whar' do we come in?"

THE CONSUMER AND THE LUMBER BARON.
(Showing their relative size in the eyes of the Dingley law.)

"Thar' you hit the nail right on the head, Deacon," said Sol. "In the Dingley way of lookin' at things you don't come in at all. You belong to the class they call the consumers, and the Dingley kind of statesman don't know you at all. You may be several millions more'n the protected class, but you haint got any political pull to speak of, and don't amount to nothin' in the lobby at Washin'ton—that's the way it is. It must be plain to eny man of common sense that free lumber would be a big blessin' to the people of the United States in gineral, and especially to us of New England that happens to be right next door to Canady—but I won't say no more less Sam there might s'pose I didn't hev the respect I'd orter hev fer Mr. Dingley of Maine."

"I've kinder got new light on this lumber question this evenin', neighbors," said Sam, candidly, "and es I look at it now, I can't see why eour folks at Washin'ton shouldn't 'gree to put lumber on the free list, specially es Canady is willin' to take the duty off other things we send over thar'. What's the trouble with it Sol? Why haint it agreed to?"

"I don't quite know," replied Sol, refilling his pipe, "but I have an idea that our commissioners is afraid the Senate won't let 'em, and the Senate dassent on account of the big lumber fellers in the lobby."

"This is my hour fer closin', friends," mildly suggested the grocery man, and the company dispersed.

J. W. BENGOUGH.

## MESSRS. E. D. DAVISON & SONS, LIMITED.

THE Lahave river, which passes through the town of Bridgewater, and empties into the Atlantic ocean, fifteen miles below, has, with its tributaries, without doubt, the largest area of timber lands to be found in the province of Nova Scotia. Lumbering on a large scale has been carried on there for forty years. At one time there were three large operators on the river, but for the last ten years or so the firm of E. D. Davison & Sons, Limited, have been the sole owners, having purchased the mills and timber properties of the other operators. Within three miles up the river from the town of Bridgewater there are several excellent water privileges, also owned and controlled by E. D. Davison & Sons, where in all likelihood pulp mills will be erected in the near future.

Messrs. Davison & Sons own over 200,000 acres of timber property, and are therefore the largest land-holders in the province. The present firm was established on the Medway river in 1840, and on the Lahave river in 1865, but their ancestors had been getting timber in the district since 1760. On the Lahave river the firm own 50,000 acres on which no logs have been cut for twenty years, and 30,000 acres on which none have ever been cut. It is estimated that their lands will produce about 4,000 feet of timber to the acre, which would give a total production, from all their property, of 800,000,000 feet, the bulk of which is spruce. There is also a considerable quantity of pine and hemlock. The facilities for logging are excellent, owing to the numerous streams and lakes, the longest haul to water not exceeding three miles. The logs are driven from twenty-five to fifty miles.

At Bridgewater the firm have two saw mills, shown in the accompanying illustrations. They are operated by water power, and are thoroughly equipped for the manufacture of first-class stock, the plant consisting of a slabbing and stock gang in what is known as the lower mill, and a live gang in the upper mill. There are also lath, picket and box machines, patent edgers, and gang circulars in both mills for sawing scantling, planks and boards up to six inches wide. The firm exercise great care in the manufacture of their lumber,

LOWER MILL OF E. D. DAVISON & SONS, LIMITED, AT BRIDGEWATER, N. S.

using very thin saws as compared with the usual gang mills sawing spruce—as thin as thirteen gauge being successfully used. The capacity of the two mills is about twelve million feet, when working day and night.

Messrs. Davison & Sons also operate a water power gang and rotary mill at Alpena, a station on the Nova Scotia Central Railroad, the timber for which is cut on the Nictaux waters and driven to the mill. The sawn lumber from this mill is taken by rail to either Bridgewater or Lunenburg for shipment. From three to five million feet are usually cut there. They also own a large two gang mill on Port Medway river, at Mill Village, and have large limits on this river, but they have not

UPPER MILL OF E. D. DAVISON & SONS, LIMITED, AT BRIDGEWATER, N. S.

operated on them for four years, preferring to let the timber grow.

The principal part of the firm's shipments are made from their wharves at Bridgewater, which are a mile below the mills, and where large vessels can load with safety. Having been in the lumber business longer than any other concern in the province, they have secured markets out of the ordinary course, and preferring to saw specifications which require considerable labor compared to the amount of lumber produced, and for which the price realized is considerably higher, they do not draw as heavily on their forest area as those who ship only deals. With the large timber limits they own, and their system

of manufacture, the lumber business bids fair to be perpetual with them. They manufacture largely for export, shipping to Great Britain, South America, West Indies, Madeira, Canary Islands, United States, Portugal and other countries.

The business was founded by the late Edward D. Davison, at Mill Village. He, with his son, acquired the privileges at Bridgewater, with some timber limits on the Lahave river, and since, from time to time, have succeeded in getting control of the whole lumber interests on the river. A few years ago the business was put into a joint stock company, under its present name, with Mr. C. Henry Davison president and general manager. After his death, which occurred in 1896, Mr. Frank Davison, brother of the deceased, became president, Mr. E. D. Davison vice-president, and Mr. A. F. Davison secretary. Mr. Frank Davison is also president of the Bridgewater Steam Packet Co., which owns the splendid Glasgow-built iron steamer, "Bridgewater," running between Bridgewater and Halifax in summer, and coast ports and Halifax in winter. Lunenburg, 19 miles by rail and 12 miles by common road, is the winter port, open the year round, from where the company ship considerable lumber.

## OBITUARY.

### ROBERT THOMSON.

THE sudden death of Mr. Robert Thomson, the well-known lumber merchant of Hamilton, which occurred on December 6th, was learned with sincere regret, not only by the citizens of Hamilton, but by a host of friends and acquaint-

THE LATE ROBERT THOMSON.

ances throughout the country at large. Mr. Thomson was apparently in the best of health, and was actively engaged in business pursuits almost up to the hour of his death. He went to Toronto in the morning to attend the meeting of the Board of Directors of the Traders' Bank; he returned by the G.T.R. train at 7 o'clock, and drove from the depot to his residence on upper James street, where he took dinner with his family. Almost immediately afterwards he complained of a sharp pain in his chest, and medical aid was at once summoned. No assistance could be given, however, and he expired in a few minutes, death being due to heart disease.

Deceased was a man of remarkable energy and clear business perception, and success attended his career. He was a Scotchman, born in Kirkconnel, Dumfriesshire, on May 21st, 1833, and was therefore in his 66th year. His parents were William and Jean Charteris Thomson, his mother being of Amisfield, Dumfriesshire, from which place the family residence in Hamilton took its name. Mr. Thomson came to America when 19 years of age, his father, mother and three sisters accompanying him. They settled at Wellington Square, now Burlington. From there they removed to Puslinch, in Wellington county, between Hamilton and Guelph, an elder brother of deceased, who had come to Canada three or four years before the rest of the family, having settled there. There they took up farming and lumbering, and Mr. Robert Thomson soon became a factor in the lumbering interests of the country. His father died in 1854, but his mother survived many years, passing away at her son's residence in Hamilton about nine years ago, at the age of 88 years. In 1856 deceased went to Cummingsville, county of Halton, and there successfully pursued the lumbering business on a large scale until 1874, when he purchased the business in Hamilton of the late Julius Cæsar McCarty. His business grew into great proportions, and of late years he controlled mills at Huntsville, Gravenhurst, Katrine, Powassan, Callendar, Chelmsford and Biscotasing, with branch offices at Windsor and Toronto, and agencies in Glasgow and Leith, Scotland, and Belfast, Ireland. The business was carried on under the name of Robert Thomson & Company.

In public affairs the late Mr. Thomson exercised considerable influence, although he would never consent to accept a public position. For many years he had been a member of the Board of License Commissioners of Hamilton; besides being a director of the Traders' Bank, he was a member of the board of the Hamilton Electric Light and Power Co., and a former director of the Hamilton Jockey Club. He was on the board of the Central Fair in the old days, and a member of the body that organized the Central Fair Agricultural and Exhibition Company, owners of the Jockey Club property.

Mr. Thomson was a member and officer of MacNab street Presbyterian church, holding the position of trustee. It was in private life that the fine qualities of the man were seen. He was of a warm hearted and generous disposition, and attracted the respect and esteem of all who knew him. In 1863 he married, and his widow and only son, Mr. J. J. C. Thomson, who has long been connected with his late father in his lumbering interests, survive.

### WILLIAM BEATTY.

AFTER a lingering illness and gradually declining health, the death of Mr. William Beatty, of Parry Sound, Ont., took place on December 11th. Deceased was the pioneer lumberman of the Parry Sound district, and was the founder of that town. He was born at Stoneyford, county of Kilkenny, Ireland, in 1835, and was therefore 63 years of age. He came to Canada with his parents when but a child, and settled at Thorold, in the Niagara district, where he spent the first thirty years of his life.

Mr. Beatty was educated at Victoria College, Cobourg, and at the University of Toronto, where he took the degree of L.L.D. He was the first representative from the county of Welland to the Ontario Legislature after Confederation, being elected in 1867. In 1863, in association with his brother, James H., and his father, Mr. Beatty purchased from Messrs. J. & W. Gibson, of Willowdale, the mill and timber limits at Parry Sound, and shortly afterward bought his father's and brother's interests and became sole owner of the Parry Sound property. Mr. Beatty foresaw that Parry Sound was destined to become an important shipping and railway centre, and up to within a short time of his death he labored zealously in the interests of the town.

When Mr. Beatty first settled in Parry Sound there were but a few log shanties. He surveyed the property into village lots, and proceeded to establish communication with other points. The steamer Waubuno was built to ply on the Georgian Bay, and from this modest commencement grew the now famous White Line of steamers and afterwards the Black Line. Mr. Beatty was instrumental in getting the government to give the first grant towards the building of a main road from Bracebridge to Parry Sound. He built much of the Parry Sound road, by means of which settlers and lumbermen could drive to Barrie, where the Northern railway then had its terminus.

Mr. Beatty was all his lifetime identified with lumbering, operating a saw mill at Parry Sound and taking contracts for logging. During the last eight years he operated only in a moderate way, although still owning timber limits on the Georgian Bay.

In 1865 the subject of our sketch was elected to the Board and Senate of Victoria University, continuing a member by re-election for about twenty-five years. Although "learned in the law," Mr. Beatty never followed the practice of the profession. In politics he was a Liberal, in religion a Methodist. In 1873 he married Miss Bowes, daughter of the late J. G. Bowes, for many years mayor of Toronto. Of his personal qualities the Parry Sound Star says: "In him the poor had a friend who did more than console them with kind words. He daily practised the spirit of the golden rule, and his loveable and gentle disposition endeared him to all who loved righteousness and truth. Truly he earned the endearing title of "Governor" which was universally accorded him, and of him it can be truly said he "bore the white flower of a blameless life." His reputation extended far beyond the borders of the town and district where his life's work has been spent, and wherever he was known he was loved and respected."

### JOHN FISHER.

IN the death of Mr. John Fisher, senior member of the firm of Small & Fisher Company, Woodstock, N.B., lost one of its best citizens and most enterprising men. Mr. Fisher was the eldest son of the late John Fisher, who moved to Woodstock from England with his family in 1859. He was born in Cockermouth, Cumberland Co., England, in 1840, thus being, at the time of his death, in his 58th year. He served as a student of mechanical engineering with Haw-

THE LATE JOHN FISHER.

thorne's, of Newcastle-on-Tyne. Coming to Canada in 1859, deceased went into the foundry and machine business with R. A. Hay, of Woodstock, N.B. In 1865 the firm of Small & Fisher was formed, with Mr. Fisher as partner. They soon worked up an extensive business in the manufacture of shingle machines, rotary mills, threshing machines, mill supplies, etc. On the decease of Mr. Small, Mr. Fisher became the head of the business. A few years ago the Small & Fisher Co. was organized as a joint stock concern, with Mr. Fisher as president and manager.

On several occasions Mr. Fisher served in a public capacity, being at different times town councillor, and a member of the county council. He was of a most kindly and benevolent disposition, and was much respected.

## PERFORATIONS IN CIRCULAR SAWS.

THERE are some points of interest connected with the perforations which have been made, from time to time, in circular saw blades. The objective point of different efforts varied considerably. The results in practice have in some cases surprised those who originated the designs. Some instances might be cited where the perforations accomplished more than the designers expected, and others which resulted in comparative or total failure when practically considered.

Perhaps the earliest record relates to a circular saw designed by J. Gove, of Fayetteville, N. C., in 1839. The object in view was to prevent the saw from buckling from the unequal expansion due to unequal heating. The saws were made as shown in Figs. 1 and 2. This invention was patented nearly 60 years ago, and saws made in both patterns are in use at the present time. Pattern shown in Fig. 1 was utilized not long since to prevent cracks from forming in circular cut-off saws. This was done as the result of an investigation into the cause of these cracks and the result arrived at independently of any knowledge of Gove'e invention. A practical test not only established the efficiency of the remedy as to the prevention of cracks, but incidentally confirmed the value of Gove's proposition. The saws run lighter, cut smoother, and always cut squarely.

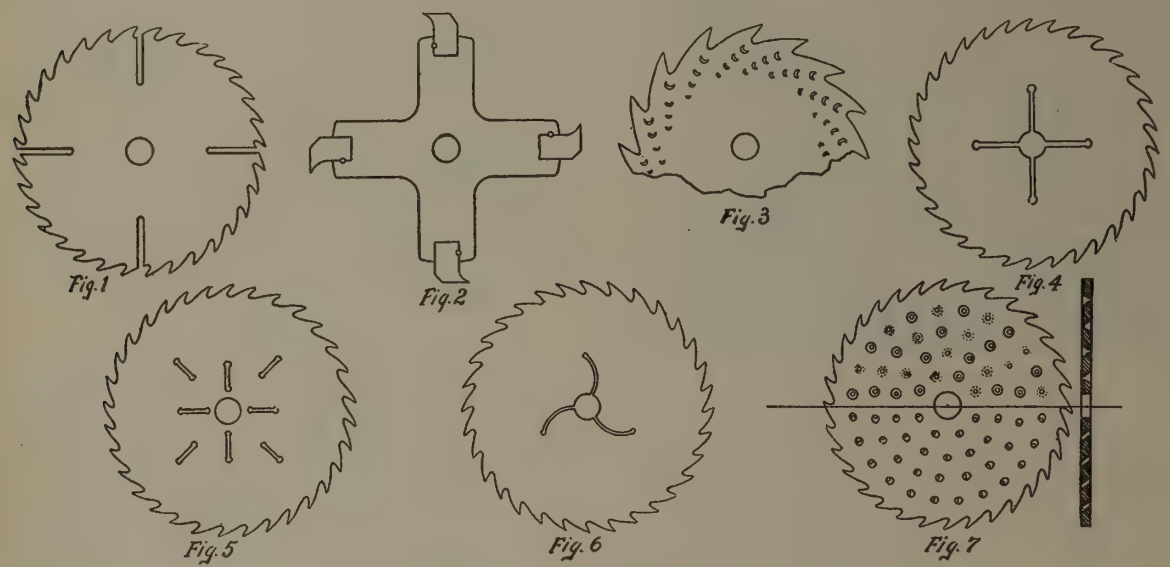
Thirty years later J. E. Emerson, of Trenton, N.J., brought out a circular saw with a series of holes or perforations extending from the gullet of the tooth some distance into the body of the saw, as shown in Fig. 3. This was designed to facilitate in gumming out the saw, and was calculated to save time and labor. At that day the modern emery saw gummers were unknown, and saws were kept in shape by filing by hand or being sent to a saw factory from time to time to be gummed out under a punch press. It can readily be seen how well contrived this plan was to the prevailing conditions. It also served to keep the periphery of the saw cool, and thus added to its efficiency. Saws of this description are still in use, and the design has proved to be of permanent value.

In 1867 I. J. Lockwood designed a circular saw with radial slots located at the centre of the saw blade, as shown at Fig. 4. This was the reverse of the Gove effort, and aimed to keep the saw free from buckle when cool on the rim and heating at the centre. Large numbers of these saws were made and were well received by lumbermen. They are still on the market.

Ten years later E. W. Tilton designed a variation in the arrangement of the slots, shown in Fig. 5. By this arrangement the range of the slots was extended to a larger proportion of the blade, at the same time leaving the saw as stiff or stiffer than in the design shown in Fig. 4. The following year a third arrangement was brought out, shown in Fig. 6. Some advantages were claimed for this design over the others, but it never came into general notice, if used at all.

A little later J. A. Miller, of Oshkosh, Wis., and W. P. Miller, of Brooklyn, N. Y., designed an arrangement of holes involving the entire saw blade, illustrated in Fig. 7. The upper part of the saw is the Oshkosh pattern, in which the holes are countersunk alternately on opposite sides of the saw. The lower half shows the Brooklyn pattern, in which the holes pierce the saw blade at an oblique angle. These saws were termed "ventilated saws," and no one will be likely to object to the term. The designer intended to keep the saws cool by inducing air currents to flow through the holes when the saw was in use. The inclined walls or sides of the holes were arranged to afford as little opportunity as possible for lodgment of sawdust. Only one saw of this sort ever came under the observation of the writer. It was a 72-inch circular, inserted tooth. The saw was made to order, as specified by the owner of the mill, six and seven gauge When put to work it persisted in heating, and was finally returned to the factory to be refitted. When it was received back at the mill it had a large number of holes about ¾-inch diameter arranged as shown in the lower half of Fig. 7. It did not work in this condition. Possibly there were too many holes and the saw lacked stiffness. It did not meet with approval and was returned to the makers. No doubt the ventilating and cooling idea was accomplished, but it made a saw difficult to hammer satisfactorily.

With these efforts and others which are simply variations or combinations of some of them, the circle looking to equalizing the expansion and contraction in circular saws by means of perforations in the saw blade, seems to have been completed. An intelligent adaptation of some features of these designs is of special value even at this late day. All of them have been the subject matter of patent claims, but the patents have now expired.



SPECIMENS OF PERFORATED SAWS.

For small circular saws and for saws running in gangs, the Gove saws are of unquestionable merit. It is a just criticism of these early inventors that they were too liberal in application. There is a dimension limit, soon reached, beyond which the area of openings in circular saw blades cannot go without impairing the strength of the saw. Inside of this limit they are, in many instances, of special value.

There is another set of openings in circular saw blades which may be dismissed very briefly. They are comprised within efforts made to effect planing or smoothing with a saw at the time the lumber is sawn. They consist of openings, varying in size and position, having edges set out beyond the surface of the saw and sharpened to make a planing cut, or, of openings into which plane irons are inserted for the same purpose. It is sufficient to say that although numerous efforts have been made to achieve success along this line, nothing has yet appeared of practical value.—Theron L. Hiles, in Wood-Worker.

## MR. VALAMORE E. TRAVERSY.

MANY of our readers will recognize in the accompanying portrait the countenance of Mr. V. E. Traversy, of Montreal, a gentleman well known in Ontario and Quebec. Mr. Traversy is a native of Ottawa. Although a young man, he is by no means a novice in mercantile affairs, having had eighteen years' experience in the lumber business, both at the mills and with the largest dealers in Canada. He has, therefore, a thoroughly practical knowledge of the trade. He represented extensive western companies until five years ago, when he went into business with George W. Perkins, of Ottawa, and established their large yards at 268 Ottawa street, Montreal. The firm, V. E. Traversy & Co., are wholesale dealers in lumber, especially white and red pine, spruce, hemlock and hardwoods, and under the able management of Mr. Traversy, a prosperous and constantly increasing business is being built up.

MR. V. E. TRAVERSY

The LUMBERMAN acknowledges receipt of calendars for 1899 from Mr. A. F. Bury-Austin, wholesale dealer in lumber and timber, Montreal, and Messrs. John Bertram & Sons, Canada Tool Works, Dundas, Ont.

## LUMBERING OPERATIONS IN NOVA SCOTIA.

[Correspondence of the CANADA LUMBERMAN.]

THE bulk of the lumber cut for export in the western part of Nova Scotia goes to South America and the West Indies, only a small portion being shipped to the United States and Europe. Beginning at Yarmouth and coming up the Bay of Fundy, the principal operators and exporters are Blackadars & Co., of Hectanooga and Methegan River. At the former place they have a steam rotary mill and at the latter a water power gang mill, with a combined capacity of six million feet. Parker, Eakins & Co. have a water power mill at Methegan river, which cuts one and one-half million feet. These mills are situated on the line of the Dominion Atlantic Railway, and the lumber is freighted to Yarmouth for shipment.

At Weymouth, G. D. Campbell saws about two million feet, and Charles Burrill & Co. buy the product of several mills, all of which is shipped direct. The Sissiboo pulp mill is about five miles above the town of Weymouth, on the Sissiboo river, and has a capacity of about twenty tons per day.

Pickles & Mills, Annapolis, have a considerable timber limit at Paradise, their output being about four million feet, which is taken by rail to Annapolis for shipment. T. S. Whitman, Annapolis, buys the cut of several small mills inland, and also ships from Annapolis. R. W. Hardwick, Annapolis, saws about one million feet for export to the United States and West Indies, also considerable for the local trade. He has a sash and door factory in connection and carries on a large building trade.

Clarke Bros., Bear River, operate several small mills, sawing from four to five million feet, which they ship in their own vessels to South America, United States and the West Indies. The vessels bring return cargoes of sugar and molasses from the West Indies, and coal from the United States.

R. W. Kinsman & Co., Canning, successors to Hon. F. W. Borden, the present Minister of Militia, have a rotary mill at Blomidon, in which they saw about three million feet per year for export. They saw some deals for the English markets, as well as boards for the United States and the West Indies. They ship via Minas Basin into the Bay of Fundy.

### THE JORDAN RIVER.

H. W. Freeman carries on lumbering operations on this river, which is about thirty-three miles east of Liverpool. About two years ago he purchased the Doull property adjoining his own, on the same river. This, with the Freeman property, which he purchased about five years ago, makes an excellent limit. Last year he thoroughly rebuilt the mill, putting in new water wheels, new rotary, and practically a new gang, and put all the other machinery in first class shape. The mill has now a capacity of five million feet in a season. Formerly the mill cut exclusively for the South American, West India and United States markets, but latterly it has been turned to sawing deals. Mr. Freeman is thoroughly practical, and is always ready to manufacture for the market that yields the best returns. He intends stocking the mill for next season to its full capacity. He resides in the shiretown, Shelburne, seven miles further west.

### MILTON.

This town is situated on the Liverpool river, about three miles from Liverpool, which is about one hundred miles west of Halifax. If the name had another "1" and a "w" put in the proper places, it would spell "Milltown,' and would describe the place exactly. There are two dams on the river, about three-quarters of a mile apart, each furnishing power for four mills, by which the town is practically sustained. There is also a large pulp mill about two miles further up the river. On the lower dam are the mills of Henry L. Tupper, John Millard, Millard & Freeman and John G. Morton. John Millard's mill is a rotary and stock gang, with patent edger, trimmers, lath machine and planer, while the others are live gang mills. At the upper dam Harlow & Kempton have a live gang and rotary mill, with patent edger, lath and picket machines, box and shook machinery. They handle from three to four million feet each season. This firm also have another mill, with planers and sash and door machinery. The Estate of Joseph Ford has a rotary, which has not been in operation this year, and Eldred Minard has a live gang, in which he saws from three-quarters to one million feet. The principal stock cut in all these mills is pine, spruce and hemlock boards, which are exported to the West Indies, South America and the United States. There is a considerable quantity of oak on this river, some of which is cut every year for Halifax markets, and also for the car works at Amherst. The pulp mill referred to is owned by the Acadia Pulp & Paper Company, who use a large quantity of the smaller logs. Their output is about sixty tons of net pulp for twenty-four hours. The pulp and lumber are transported to shipping point at Liverpool on a steam tramway, built about two years ago. The lumber operations in Milton have been very slack for the past two or three years, owing to the complications in Cuba and other West Indian Islands, but now that there is a prospect of business reverting to its normal condition, the outlook is brighter.

About three miles east of Milton, J. &. J. Coops have a steam gang, shingle and planing mill, and also a mill for cutting pulp blocks for the Acadia pulp mill at Milton. This firm saw about one million feet per year, of board, ship and building timber. Lumber shipments from Liverpool are made in a small class of vessels—brigs, brigantines and schooners—which usually return with sugar or molasses to some of the Nova Scotian ports.

### SHEET HARBOR.

The section of country that goes under the name of Sheet Harbor has been operated for a long time, but for a few years back neither of the large limits which converge there have been operated but to a very limited extent. There was an American syndicate which bonded these and a number of other properties, but for some reason the purchase was not completed. Afterwards capitalists at Amherst concluded that these properties offered good fields for investment, with the result that both were purchased in 1896, and have been operated to a moderate extent since. The property at West River, Sheet Harbor, is owned by the Sheet Harbor Lumber Co., who have sawn about four million feet of English deals in each of the two years they have owned the property. At East River, some two miles distant, the East River Lumber Company have operated to about the same extent. These two rivers afford splendid water power privileges, and a description of one mill will suffice for the other. The equipment consists of a live gang and rotary, with the necessary edging and trimming machinery and planers. Large ships can take cargo in the river, a short distance below the East River mill. These mills have usually sawn for the English markets. Sheet Harbor is about sixty miles by water east of Halifax, on the Atlantic coast.

## WANT FREE LUMBER.

AT the monthly meeting of the Massachusetts Wholesale Lumber Dealers' Association, held in Boston on December 8th, one of the subjects to which careful attention was given by the members present was "Reciprocal Trade with Canada from the Lumberman's Point of View," which was interestingly treated by Mr. W. R. Chester. He pointed out that the enormous amount of lumber that is being used for manufacturing purposes in the United States, particularly for supplying the immense and steadily increasing demand for wood-pulp paper, is fas decimating the forests of that country. In New York and New England alone the amount of spruce used in paper manufacturing now amounts to 650,000,000 feet a year, while from Maine to Michigan, inclusive, all except the coarser qualities of pine have been practically used up. Under these circumstances he felt that the hour had arrived when the rapid destruction of the forests of the United States should be stopped, and what is left of them carefully husbanded. This necessary policy in the face of the continuous demand for lumber of all kinds could only be carried out by drawing what is needed for manufacturing purposes from the abundant supply to be found in the forests of Canada. In pursuance of his advice, a resolution was introduced and referred to a special committee stating that "the Association favors reciprocity relations with Canada whenever such relations can be established on a fair and equitable basis; that it behooves this Association to give this subject careful consideration, as the lumber interests of the two countries are extensive; and that, owing to the vast amount of spruce now being used for pulp to be manufactured into paper, this wood being considered the most valuable for that purpose, our spruce forests are being rapidly decimated, while our pine forests have been practically cleared of all but coarse qualities, from Maine to, and including, Michigan. We believe the time has come for us to carefully husband the remaining forests, as the source of future wealth, health and beauty, and to borrow from our neighbor, who still has an abundance."

## REPORTS FROM FOREIGN COUNTRIES.

THE government of Tasmania, a colony south of Australia, has passed an act making certain changes in the customs duties. The new schedule relating to timber is as follows:

Timber, sawn, 3 inches or over, not elsewhere specified, 1s. 6d. per 100 superficial feet; timber, sawn, under 3 inches, 2s. 6d. per 100 superficial feet; timber, planed, of every description, including tongued and grooved boards, 5s. per 100 superficial feet; timber, in short lengths, suitable for making cases, not exceeding two cubic feet in measurement, 1½d. per case; timber in log and veneer wood, free.

Mr. J. S. Larke, commissioner for Australia, writes to the Department of Trade and Commerce as follows:

I have had an inquiry respecting sculls and boat oars. The extent of the trade I have called attention to in previous reports. The chief demand is for ash oars, and they are bought in lots of five hundred and a thousand pairs. The number of spruce sculls required is more limited. The business is now largely done by Detroit and New York firms. The following are prices quoted f.o.b. at Detroit, cash:—

| | Per Foot |
|---|---|
| Plain ash oars, 6 to 12 ft. in length | 5c. |
| " " " 13 to 16 ft. in length | 6c. |
| " " " 17 to 18 ft. in length | 6½c. |
| " " " 19 ft. and upwards (Extra up to 22 ft. 2c. after.) | 1c. |
| " " " 6 to 12 ft. in length, copper tipped | 5½c. |
| Pine spoon oars, 7 to 8 ft. in length | 10c. |
| Spruce spoon oars, 7 to 8 ft. long, copper tipped, leathered and varnished | 13c. |
| Straight spruce oars, 7 to 8 ft. long, copper tipped | 7c. |

The report of Mr. G. Eustace Bird, commercial agent for Kingston, Jamaica, says of lumber:

"What, however, concerns me most to bring to the notice of your honorable department is, that as a result of the war and the difficulty at first in chartering American bottoms, lumber of all descriptions made a considerable advance; in fact, in many instances orders could not be supplied. I then thought it a good opportunity for the exporters in the provinces of Quebec, New Brunswick and Nova Scotia to introduce their spruce and pine direct instead of via New York, and felt it incumbent on me to take measure to bring the situation to their notice. I accordingly addressed a communication to the CANADA LUMBERMAN, of Toronto, Ontario, and other organs on the subject, giving full particulars as to the sizes and descriptions required, offering my services for any other information desired. I, however, regret to say that but one cargo arrived at the port of Montego Bay, and that by chance, the craft being unable to enter a Cuban blockaded port. Although results were anything but satisfactory, I felt satisfied that I had done my duty, and I again through your honorable department call the attention of Canadian lumbermen to the fact that there is plenty of room for a direct profitable trade."

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

The J. C. McLaren Belting Company, of Montreal, are sending to their customers a neat 15-inch desk rule, drawing attention to their well-known brands of belting, general mill supplies, pulleys, etc.

## THE JAMES SHEARER COMPANY.

THE lumber and building trade of Montreal is one of its most important industries, as evidenced by the numerous substantial houses engaged in the various branches of the trade. Foremost among the establishments of this character is that of the James Shearer Company, located at No. 172 Shearer street. This company are extensive manufacturers of doors, sashes, blinds, mouldings and all kinds of house and steamboat work, as well as lumber, flooring, laths, shingles, clapboards, etc. The business was founded forty years ago by Mr. James Shearer, and on the 1st of January, 1896, the present company was organized under the laws of the province, with a capital of $200,000, Mr. James Shearer being president, Mr. James T. Shearer vice-president, and Mr. Bert H. Wills secretary and treasurer. The plant comprises a four storey planing mill, sash, door and blind factory, shown in the accompanying illustration, and a large lumber yard, bounded by Shearer, St. Patrick, Island streets and canal bank; while the equipment embraces the latest improved machinery, operated by water power and auxiliary engines of one hundred horse power. Steady employment is given to one hundred and forty skilled workmen.

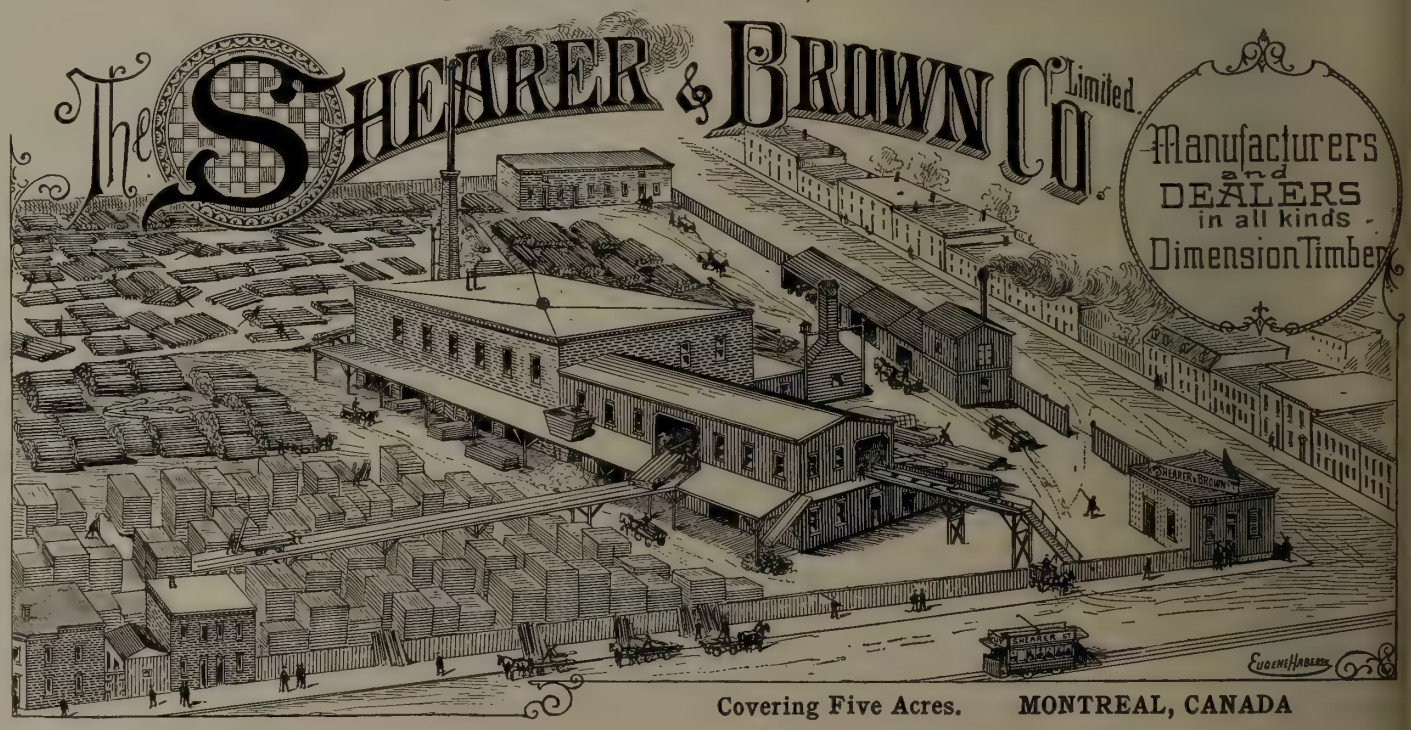
Covering Ten Acres. MONTREAL, CANADA

The facilities of the James Shearer Company for supplying builders and consumers with first-class materials are such as can be readily appreciated by those thoroughly understanding the business, and who are enterprising enough to take advantage of every convenience whereby orders may be promptly filled and with satisfaction to customers. The situation of their factory commands unsurpassed facilities for the receipt and transportation of supplies by rail and water. This company are also prominent as builders and contractors, and among notable specimens of their work may be named the Merchants Bank of Halifax, corner Seigneurs and Notre Dame streets; Dominion Cotton Mill plant; Watson, Foster & Co.'s plant; Belding, Paul & Co.'s silk mills; John McDougall's boiler shop; Sadler & Haworth's leather belting factory; the Rodier block; Protestant Insane Asylum at Verdun; Montreal Sailors' Institute; Queen's Park grand stand; Montreal Baseball Co.'s grand stand, and Montreal Arena building, besides many residences. Orders and commissions receive immediate personal attention, to which is due, in no slight degree, the extensive trade of the company both in city and country.

President Shearer, the founder of the business, is a native of Scotland, and deservedly prominent as president of the Shearer & Brown Co. of that city, a member of the Board of Trade, and a representative business man. His son, Mr. Jas. T. Shearer, vice-president, was born in Montreal, and holds important positions in many other companies. Portraits of these gentlemen appear on the opposite page. Together with the secretary, Mr. Wills, they bring special qualifications to bear on the building trade. They are closely identified with the best interests of Montreal, and have ever given cordial support to all measures calculated to promote the future benefit and permanent welfare of the city, whose commerce and trade they are promoting with zeal, enterprise and marked success. We predict for this company a steadily increasing patronage.

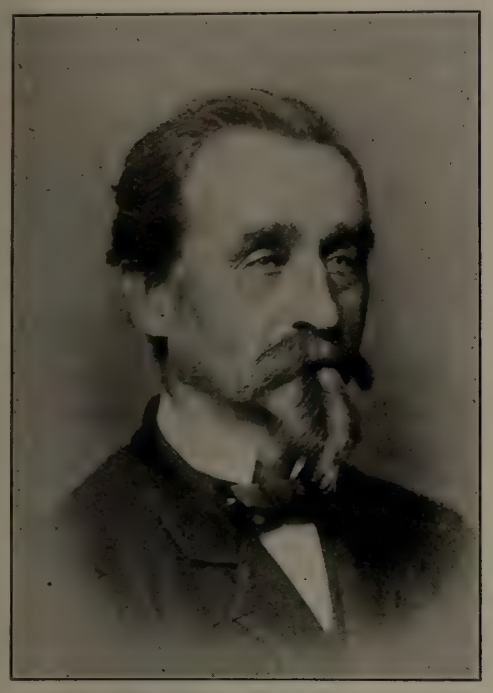
## THE SHEARER & BROWN COMPANY.

The Shearer & Brown Company, Limited, are manufacturers of dimension timber and saw mill lumber in Montreal. It is one of the few houses in the trade that are conducted under a management whose policy is a successful continuation of all the sterling principles of old-time trading, with a strong progressive tendency so essential to success. The large and successful business conducted by this company was established by Messrs. James Shearer and Jonathan Brown in 1866. The present company was incorporated under Dominion laws on November 1st, 1895, with a capital stock of $100,000. The office of the company is conveniently located at No. 172 Shearer street, while the exterior mill and yards are at the corner of Richardson and Shearer streets. The saw mill at Montreal, of which a view is shown, is fully equipped, and has a capacity of cutting forty thousand feet of lumber daily. A large stock of the best white and red pine, hemlock, spruce, tamarac, cedar, rock elm and oak lumber is kept on hand and cut to order, a specialty being made of dimension timber and joisting. The company own and operate timber lands in the Nipissing district, in the province of Ontario, Mr. D. McIntyre, jr., Cache Bay P. O., being manager, also in Clarence township, Russell county, of which Mr. John Hunter, Hammond P.O., is manager. The trade of the company is with dealers throughout the Dominion, shipments being made by rail and canal. Buyers everywhere are said to accord this company unlimited confidence as one of the most satisfactory and reliable from which to obtain their lumber requirements. In addition to the



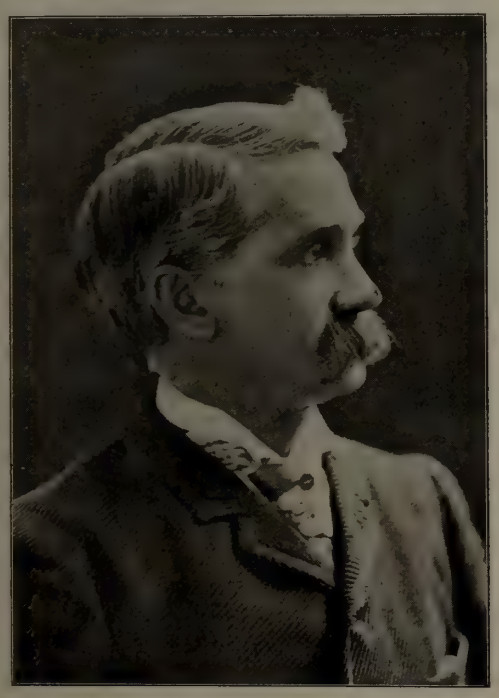
Covering Five Acres. MONTREAL, CANADA

various classes of lumber above mentioned, the company are in a position to supply telegraph poles, railroad ties, cedar posts, British Columbia fir, Southern pine, and car and boat timber, and are always pleased to furnish quotations on bills. Mr. James Shearer, president of the James Shearer Company, is also president of



MR. JAMES SHEARER.

this company, and is an energetic business man. Mr. Jonathan Brown, the vice-president, who is also a native of Scotland, is thoroughly experienced in the business. Mr. James T. Shearer is manager and director. He is vice-president of the James Shearer Company, president of the Canadian Construction Company, director of the Philipsburg Junction Railway and Quarry Company, and director of the Jacques



MR. JAMES. T. SHEARER.

Cartier Pulp and Paper Company. Mr. Bert H. Wills is secretary and treasurer of this company, as well as of the James Shearer Company. He is a man of tried and sterling personal worth.

---

Mr. H. R. McLellan, of St. John, N.B., has recently returned from England.

Messrs. G. B. Housser & Co., of Portage la Prairie, Man., intend erecting large lumber sheds.

## THE FILER.

BY "MECHANIC."

SAW fitting is considered one of the most important jobs in the saw mill. The quantity and quality of lumber cut and the steady hum of the saws depend largely upon how the saws are fitted up, and the filer is therefore a profitable or profitless man for his employer, according as he fits his saws in condition to operate. As a rule, the filer should have some knowledge of millwright work, at least to the extent that he may ascertain when faults lie in the saw, in the mill, the carriage, the track, or any portion of the plant directly under his personal supervision or operation.

Defects may lie in any of these places, which, if not ascertained and remedied, will render only partially effectual the best of efforts tending to improvements in the care of saws. The service of a saw filer may be invaluable at from three to eight dollars per day, or expensive at two dollars per day. One fitter may increase the cut of well manufactured lumber from two to five thousand feet per day; another may not only lessen the average cut, but also impair the quality of the output, a double loss.

The actual results in the running of saws depend largely on the skill of the filer, and upon his having good saw fitting machinery to work with. If the filer has not the proper saw fitting tools he is not in a position to do fine work.

Every filing room should be equipped with the best saw fitting tools procurable, and saw filers should be interested in any method, or machines, or tools that are well calculated to improve or facilitate saw fitting. Their services are mental and mechanical rather than physical. Hence, intelligence and skill in a filer are better recommendations than physical strength or a disposition to hammer and file from morning till night. It is not a question of quantity altogether, but of quality of work.

(To be Continued.)

## PUBLICATIONS.

An attractive feature of the January Ladies Home Journal is the collection of photographs of "Some Remarkable Old Ladies" artistically grouped on a single page. Of the fourteen ladies all are above four score, and five are centenarians. The photograph of each one reflects the beauty of a happy life of well-doing—a beauty that time cannot obliterate.

An illustrated anecdotal character sketch of the late General Garcia, the Cuban patriot, is contributed to the January Review of Reviews by George Reno, who was closely associated with General Garcia for two years. The frontispiece of the Review is a portrait of General Garcia from a photograph taken by Clinedinst, of Washington, only a few days before the general's death.

Messrs. John Hadden & Co., Bouverie House, London, Eng., have published an attractively printed brochure entitled "A New Field for British Manufacturers," in which are concisely set forth many important facts concerning the nature and extent of Canada's trade requirements. Suggestions are made as to advertising and other methods by which British manufacturers might develop their business in the Dominion. This little book is well calculated to promote closer trade relations between Great Britain and this country, a subject of much present importance.

---

Readers of THE LUMBERMAN who contemplate enlarging their mill, or purchasing new machinery of any kind, are asked to advise us of their requirements. Such information is greatly appreciated.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## MILL AND FACTORY SITES.

MASSEY, Dec. 19th, 1898.

Editor of the CANADA LUMBERMAN:

DEAR SIR,—If you will allow me space in your valuable paper, I would like to call the attention of the public to our immense water powers on the Sauble river at Massey. Massey is situate 58 miles west of Sudbury, on the Soo branch of the C. P. R., at a point near the Spanish river where the Sauble river intersects it. There are three water falls within a little over half a mile from the town, excellent sites for erecting pulp mills or factories, and great shipping facilities either by the C.P.R. or by boat down the Spanish river.

Massey is a lumbering town, and the lumbermen have foot roads cut out and graded for over fifty miles north of the town parallel with the Sauble river, and camps are erected here and there through and near the vast tracts of spruce. We have over twenty townships of spruce in this part of the district, besides an endless quantity lying along the Spanish river which is of easy access to the water powers on the Sauble. Our town is willing to assist in every way possible to induce capitalists to invest in mills of any kind. I might say also that we have an endless quantity of good maple, birch and oak for furniture purposes, plenty of room for two or three factories or mills, and an excellent site for a good large town. For any information regarding the above apply to Newton H. Bowers, J.P., and the same will be cheerfully given.

Yours respectfully,
"READER."

## HARDWOOD LUMBER RATES.

OWEN SOUND, ONT., Dec. 24th, 1898.

Editor CANADA LUMBERMAN:

NOW that a demand for hardwood stock, in rough, for export, is springing up, the question of rates is of vital importance to the hardwood lumber manufacturer. For a number of years, for some unaccountable reason, the railway companies of Canada have made a discrimination against hardwood lumber, charging from one cent to two and one half cents per 100 lbs. more than for pine or basswood lumber. This discrimination has caused thousands of acres of beech and maple to be cut into cordwood in the counties of Grey and Bruce alone that would have gone largely into lumber if the railway people would only take a more just view of the equalization of rates When cut into cordwood it is carried in the same cars and largely to the same markets and over the same roads for just about one-half the rates they would get were the same trees made into lumber and carried on the same rates as pine. Then, again, in the manufacture of hardwood lumber, there is, on an average, 30 per cent. that runs to common and mill culls that it is difficult to sell for anything but firewood; but you can't ship it as such unless you cut it four feet or shorter in length. Neither can you load it up as cull lumber and ship it with pine or hemlock, without paying the additional charge made against hardwood lumber.

If the hardwood manufacturers were to take this matter up unitedly with the Canadian railway companies, I am sure they would ultimately succeed in getting this discrimination removed. There are no roads in the United States which make this most unjust discrimination. The writer would be pleased to hear from others of your readers who are interested in hardwood manufacture. Lack of time prevents me from pursuing this subject further, but I will at a later date take up the matter again. In the meantime, I will be glad to hear from other interested manufacturers on the subject.

Yours respectfully,
"HARDWOOD."

---

A well-known logger, in the person of Robert Law, died at Vancouver, B.C., last month. He had been handlogging on Thurlow island and had a boom ready. He went to Vancouver about December 1st, and stopped at the Terminus hotel, waiting for the arrival of the tug with the boom, but took ill and expired suddenly. He had been connected with logging operations for ten years, and was a native of London, Ont.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the tr Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. it ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## 1898-99.

THIS issue of the CANADA LUMBERMAN marks the incoming of another year, and suggests a few thoughts as to the conditions which have prevailed during the year which has just passed into history. Speaking from an international standpoint, the past twelve months have not witnessed that peace and harmony which is so much to be desired by all nations. The great Republic to the south felt called upon to take up arms to defend the freedom of a helpless people. Later the war cloud hovered over the European continent, and for a time a conflict between the mother country and France seemed certain. But at the close of the year the horizon brightened, and war seems to be a more remote condition, for which all should be thankfnl.

So far as Canada is concerned, the year has been a remarkable one in many respects. After a somewhat lengthened period of depression, it has marked the return of prosperity. There has been a substantial improvement in the commerce of the country, in the development of our natural resources, and a large increase in the number of industrial establishments—to the betterment of the people in general. The development of our mines, the greater number of buildings erected, the contemplated construction of railways, harbor improvements, pulp mills, all bear evidence that we have entered upon a new era of prosperity. The amount of British capital that is finding its way to this country for investment is an indication that our natural advantages are becoming known abroad. Following this will come the much desired increase in population.

The lumber trade has, in some degree, shared in the general improvement, although probably not in equal degree with other industries. Peculiar circumstances affecting the export trade, and which may not be experienced again for years to come, have precluded the full measure of benefit which would otherwise have come to the trade from the improved commercial conditions. One feature, however, particularly favorable to lumbermen is the increasing local demand, as a result of the establishment of a greater number of wood-working factories and of more extensive building operations. We believe that during the past year the consumption of lumber per capita by the population of Canada was larger than ever before. As our home consumption increases, we will become less dependent upon foreign markets.

It is with gratitude to our advertisers and readers that the publishers of this journal announce their participation in the general business improvement. During the year the CANADA LUMBERMAN has been accorded a liberal support, its circulation having been greatly extended in foreign countries, as well as in Canada. This we regard as a practical demonstration that our efforts to furnish the trade with a thoroughly reliable and up-to-date journal are appreciated. Throughout the present year our efforts will be unceasing to improve the standard of the journal, and to render it of greater value and assistance to the trade. To all our readers we extend a New Year's greeting, and trust that 1899 may be a year of continued prosperity.

## THE LUMBER TARIFF PROBLEM.

THE December number of the monthly edition of the CANADA LUMBERMAN has been received, and it is remarkable how quiet it is on the subject of the lumber tariff.—Mississippi Valley Lumberman.

Our contemporary is evidently non-plussed at our total indifference. We are glad that this same degree of indifference pervades the lumber trade of Canada and the country at large. In the words of a prominent lumberman, in speaking of the negotiations at Washington: "We will be content if they do nothing." Why should we be continually worrying over a matter after having definitely announced and acted upon our policy? Free logs for free lumber has been offered—nothing short of it will be accepted. If the United States objects to this method of equalizing conditions, then the prohibition of the export of logs will continue. It is not a question to be settled by the Dominion of Canada, but by the various conflicting interests in the United States.

Should the efforts of the Joint High Commission prove abortive, the other provincial governments will no doubt follow the example of Ontario and prohibit the export of pulp wood. Indeed, the authorities at Quebec are now believed to be considering this step. By cutting off the timber supply of the United States, and thus wiping out their export trade to a large extent, we will be enabled to place a much greater quantity of lumber and pulp in foreign markets. Public sentiment is strongly in favor of this course being adopted even in the event of free admission of our lumber to the United States. The feeling is against the building up of pulp and paper industries in the United States by means of Canadian raw material.

The Commission sitting at Washington has adjourned until January 5th. What has been offered by the representatives of the two countries as the basis of a reciprocity treaty is not definitely known, yet as to the lumber duties the reports are on certain points almost unanimous. The Canadian Commissioners have, it is said, been offered several modifications of the tariff, in the shape of the removal of the duty on the higher grades of lumber; the reduction of the duty to one dollar per thousand feet; or a sliding-scale arrangement, commencing with a reduction of 20 per cent. and eventuating in the entire removal of the duty at the end of five years. None of these concessions will be accepted by the Canadian Commissioners. Even were they disposed to agree to a settlement of the question on the lines of any of the above offers, there would still be found an insurmountable obstacle in the Ontario government. Hon. A. S. Hardy and his colleagues have spoken in unmistakable terms. They will permit the exportation of saw-logs only in consideration of the free entry into the United States of the forest products of Canada.

## VALUE OF LUMBER ASSOCIATIONS.

THE number of lumber associations in the United States, and their continuation from year to year, leads to the conclusion that they have proved beneficial to their members. Not only are there associations representing the different branches, such as the white pine, the yellow pine, and the hardwood manufacturers, wholesale and retail dealers, salesmen, etc., but the secretaries of these various lumber associations have also an organization of their own, the purpose of which is to discuss ways and means for executing their work in the most efficient manner. There can be no doubt that the meetings of these associations accomplish good results—they diffuse new ideas, broaden the minds of the members, promote social intercourse, and, in the end, oil the wheels of business.

That in Canada the movement towards organization has been so backward is not readily explainable. In an industry of the magnitude of that of lumber, there cannot but be questions which could be discussed with profit by associations formed to represent the different provinces and interests, to say nothing of the social advantages. Yet the only lumber manufacturers' association in existence in Canada to-day is the Lumbermen's Association of Ontario, which was revived into activity about eighteen months ago. We must not, however, overlook the Western Retail Lumbermen's Association of Manitoba, of which the manufacturers catering to that market are honorary members. An association once existed in New Brunswick, but as no meetings have been held for some years, it has probably become extinct.

A social society which has invaded Canada from the United States is the Hoo-Hoo order, composed of lumbermen and persons identified with the lumber trade. Two branches have been established, one at Vancouver, B. C., and

one at Winnipeg, Man. It is probable that an effort will be made to form others at various points in Canada, the success of which we would welcome as indicative of a growing disposition towards closer relations between persons having interests in common.

Probably the most urgent need of organization is among the spruce manufacturers of Quebec, New Brunswick and Nova Scotia. It should not be a difficult matter to form an association to conserve the interests of the lumber manufacturers of these provinces, situated, as they are, adjoining each other. The headquarters of the association might be in St. John, the most suitable place. Owing to its central location, members from all points could attend the meetings with but little expense or loss of time.

We hope that during the coming year the lumbermen of Canada will take steps in the direction of more complete organization, and that live associations may be formed representing every branch of the trade.

## EDITORIAL NOTES.

INFORMATION is now being collected for the annual review of the lumber trade to appear in the February number of THE LUMBERMAN. Blank forms have been sent to manufacturers throughout the Dominion, and we respectfully ask that they be returned to this office, with the required particulars, without delay. In addition to this, we would be pleased to receive from any of our readers statistics or general information which would assist us in the preparation of the review.

THE timber interests of Canada will learn with satisfaction that there is now a fair prospect of an early settlement of the chartering difficulty, referred to in our last issue. The Documentary Committee, by whom the charter party was drawn up, has submitted to the British Timber Trade Federation certain modifications in the Baltic charter, the amended form being a distinct improvement on that previously submitted. With a settlement of this charter, it is believed that no difficulty will be encountered in arranging amicably the Canadian document, more especially as the shipowners are now fully cognizant of the attitude of the timber trade in general.

REVERTING to our remarks in last issue anent the discrimination in freight rates against hardwoods, we find the Mississippi Valley Lumberman taking up the cudgels on behalf of the hardwood trade. It concludes its arguments for a rate on hardwoods similar to that on pine in the following words: "The car can be loaded to its maximum capacity better with hardwood than with pine. A car heavily loaded with hardwood is safer to haul than one heavily loaded with pine. The damage to hardwood in case of accident is usually less than that to pine. The greater value of the hardwood should not make the difference in the rate, for pine uppers may be worth more than hardwood uppers, and low grade hardwood may be worth less than average pine."

THE Dominion government is to be commended for the step it has taken to preserve forest areas in Manitoba and the Northwest Territory. This western country is largely a prairie region, and timber areas are therefore specially valuable. With proper attention it is possible, also, to make these reserves a source of revenue to the couutry. The town of Freudenstadt, in Germany, owns a forest of less than six thousand acres, which is said to produce a revenue sufficient to meet the annual expenditure of the town. The great Black Forest in Germany yields an annual net revenue varying from $2.50 to $10 per acre, and is a region unfit for cultivation in any other manner. Canada should profit by the experience of older countries.

IN common with all Canadians, we welcome the establishment of a new service of steamers between Canada and Great Britain. The points of destination are Paspebiac, at the mouth of the St. Lawrence river, in Quebec, and Milford Haven, in Pembrokeshire, England. It is claimed that a considerable saving both in time and distance, as compared with the Liverpool route, will be effected by this line. But perhaps the greatest advantage will be in the direction of providing the necessary shipping facilities for Canadian produce, the lack of which has in the past resulted in a large proportion of our products being exported to Great Britain by way of United States ports. In many instances, also, these products of Canada were credited to our neighbors. It is to be hoped that the promoters of the enterprise may be able to make it a financial success, and be encouraged to establish other similar services.

## HOW TO USE A LOG RULE OR SCALING STICK.

THE ordinary log scaler's rule is something of a puzzle to the beginner in its use, even when he knows just how to use the common board rule. A correspondent wants to know just how to use the rule; in other words, as near as I can make out, how to scale a log.

The log rule is usually a flat hickory stick 4 or 4½ feet long and about 1½ inches wide. It has two lines running lengthwise on each side, making three spaces in the width of the rule. On the head or lower end in these spaces are stamped, beginning on the left, the figures 12, 14, 16 on one side, and 18, 20, 22 on the other. These figures represent the lengths of logs to be scaled. There are rules for special purposes beginning with smaller numbers for shorter logs, and a few are made to order wider and with four or more spaces on each side. But the man who can not scale any length of log that was ever cut on a three-run, four-foot rule or stick has not learned his business.

Stamped on one edge of the rule is a regular four-foot rule in inches, usually beginning with eight inches, as that is supposed to be the smallest log ever scaled. The two flat faces of the rule are also marked across into one-inch spaces to correspond with the inch marks on the edge. In these spaces are stamped figures to represent the contents in board feet of a log of the diameter of the corresponding figures in inches on the edge and of the length of the figures on the head of the rule in the same space.

Now to scale a log, first get its diameter inside the bark at the top or smallest end, then get its length, then look in the column containing the length, in the space opposite the figures on the edge denoting the diameter you have found, and there you will find the amount. For instance, if the log is 14 feet long and 16 inches in diameter at the top end inside the bark, look along the edge of the rule to the figure 16 inches, then to the figures in the space indicated by 14 on the head of the rule, and the figures there found will give the contents in board measure. According to Doyle's rule this amount will be 126 feet. If the log is only 12 feet long and of the same diameter, the contents will be 108 feet, and if 16 feet long, 144 feet. The old Scribner rule gave these figures as 139, 119 and 159 respectively, for a 16-inch log 14, 12 or 16 feet long.

I would say the figures for diameter are usually stamped on both edges of the rule, and the figures for the length are usually also stamped across the top or handle end of the rule, as well as on the head. Some rules are also made with these figures denoting length with the lowest number, 12, on the right, but in scaling a good many million feet of logs I always used the other or right-handed rule. There are a lot of things a scaler must learn, but only by practice under a good instructor. If the log is crooked, he must get his diameter between two straight lines, drawn by the eye so as to leave out the crook; in other words, straighten the log. If the heart is defective, its proportion to the total bulk of the log must be thrown off, either in making the diameter or from the total contents; the former is preferable for reasons to follow. Other defects must also be measured out.

In practice, except when buying a few logs at a time which one may want to figure on the spot as a matter of convenience, the scaler makes little or no use of the scale on the face of his rule. Instead, he has a tally book in which he simply tallies each log in the column denoting its length at the top and opposite the figures in the margin denoting the diameter. When his day's work or job is done, all he has to do is to multiply the number of feet in a log of a given size and length by the number of tallies set against it and add the totals. He thus saves a lot of unnecessary figures and besides has a complete record of every size and length of log in the lot, which is often of great moment in determining their value. Scribner's tables as now published use only the Doyle rule, having practically discarded the old Scribner rule, as the latter was never a favorite with log buyers.

In scaling logs of other lengths, those below 12 feet are measured at one-half or the proper fraction of one of the lengths given. For instance, a 10-foot log is measured for one-half a 20-foot, and so on. 12, 14 and 16 are considered the standard lengths, and all logs over 22 feet are measured as though cut into standard lengths, "raising the scale," or in other words increasing the diameter one inch for every standard length made from the top down. A 24-foot log 12 inches in diameter at the top is scaled as if cut into two 12 foot logs, calling the butt log one inch larger than the top one, or 13 inches, to allow for supposed taper. A 30-foot 12-inch log is scaled as one 16-foot 12-inch and one 14-foot 13-inch, always making the top log the longer one where the division can not be made even, remembering that all logs are measured in even feet unless otherwise agreed on in the contract. But there are long logs that have so little taper that it would not be fair to "raise the scale," and that is a question for the good judgment of the scaler.

These and other questions should naturally suggest themselves to him with experience. He should remember that but few logs are actually round, generally having one short diameter, which is the one to take.—O. S. Whitmore, in The Wood-Worker.

WHEN in Owen Sound recently I dropped into the office of the North American Bent Chair Company, and was surprised to learn that notwithstanding that their large new factory was erected about two years ago, they have in contemplation the building of an addition. This is necessitated by their rapidly increasing trade both at home and abroad. Their principal foreign markets are Australia and England. I am informed that the company have oponed a branch at 447 Kent street, Sydney, Australia, which will be managed by Mr. L. O. Banting, who lately left Owen Sound for his new field of labor. In the manufacture of chairs the North American Bent Chair Company consume a large quantity of hardwood lumber, of elm, birch, beech, maple and oak. Hemlock and basswood are used for packing the chairs for foreign trade. Last year over three million feet of hardwood logs were manufactured into chairs, and in 1899 four million feet are expected to be required.

* * *

IN certain ancient hardwood districts of Ontario the timber has become almost exhausted. Mills that once were overstocked with logs are being removed to new locations where the primeval forests are still untouched. Take, for example, the Owen Sound and Wiarton district. No such quantity of hardwoods as once existed can now be found. But it is surprising how long after the supply is believed to have become exhausted some of these localities continue to rank as lumber producing. This question I discussed with an Owen Sound hardwood man, who gave as a reason that the older men, imbued with the necessity of making provision for coming generations, were husbanding their timber. "As they die off," he remarked, "the sons, less mindful of the interest of their successors, place the timber upon the market. I know of just such lots of hardwoods at the present time. Ten years ago, when we were taking out logs of 45 feet average, we could see but one or two year's supply, yet to-day we are still cutting timber of that size." Another mill man with whom I conversed remarked that some persons owning a little timber refused to sell, on the ground that prices would be much higher in years to come. From a financial point of view he thought they were making a mistake. "They will find," he said, "that the quantity obtainable in the locality is so small that dealers will not handle it. That is what has actually happened in the case of cherry, walnut and other scarce woods. Unless you have a considerable supply you can't find a market for it."

* * *

I NOTICE in the Timberman an item of special interest to Canadian exporters. Its English correspondent says: Some time ago in these notes I mentioned that a firm (The M. Timber Co. of Canada) had started business on this side for the purpose of supplying the chair trade of this country (which has its centre at High Wycombe) with partly converted "stuff," i.e., tops, bottoms, rails, etc., of chairs. The success that has attended the operations of this concern has induced one of the leading chair manufacturers of High Wycombe to go into the business on his own account and import direct. I refer to Messrs. R. Howland & Co., and I recently gathered from Mr. R. Howland, jr., who has negotiated the business, what the intentions of his firm are. Mr. Howland has appointed an agent in Canada who will look after his firm's interest exclusively, and besides utilizing the ready-made articles in their own business, his firm contemplates placing the stuff on the local market. It is hoped that the use of same will mean a good deal to the Wycombe manufacturers, and will enable them to keep their hold on trade that seems inclined to drift away from the town; provided, of course, that satisfactory terms can be arranged with the shipping and railway companies in the matter of freight. Anyhow, Mr. Howland has placed orders to the extent of £8,000 for goods to be delivered during 1899, and if the venture proves successful (as there is every prospect of its doing), a still larger business will doubtless be done in the future, which should be fraught with good to all concerned on both sides of the Atlantic.

* * *

EVERYONE knows C. Beck, of Penetang, he who figured so prominently in the movement to have embodied in the Ontario laws the manufacturing clause which is now causing the Michigan lumbermen so much anxiety. When on one of his frequent visits to Toronto last month he was captured by one of the invincible representatives of the daily press. On the lumber question he said: "As far as the lumbermen of Ontario, and especially of the Georgian Bay, are concerned, it is immaterial to them whether we get free lumber or not. As I understand free lumber, it means the free exportation of logs which is now prohibited. Although the Americans no doubt have large quantities of southern pine, in many cases it will not fill the requirements of our white pine. Minnesota and Wisconsin pine are too far away from the eastern market, and, besides, the timber of that region is not so good as our Canadian pine. Therefore, I think it would be to the interest of Ontario if the present arrangements were maintained by our local government. The shortage in the eastern market that would be caused by the stoppage of the export of our logs to Michigan would cause an advance in the price of our lumber, and the consumers would have to pay the advanced price, and we would, besides, have the manufacturing of the whole of our Ontario pine. The present arrangement is a great benefit to the province at large, and in my opinion it would be better for Ontario not to get free lumber. As free lumber would mean free logs, that is where the Georgian Bay millmen and the country would lose. I would not, however, object to free trade in lumber, if that could not be done; I would not feel contented to have a half measure, that is to say, to have the duty reduced to one dollar and give the Americans free logs. If the arrangement fails in regard to the lumber question, all I would ask and expect of our government would be to put a duty on the American lumber equal to their duty now on ours."

## HELPFUL IN BUSINESS.

A COPY of this issue of THE CANADA LUMBERMAN will fall into the hands of a number of persons interested in lumbering and allied industries who are not regular readers of the journal. From these we respectfully solicit their authority to add their names to our already large number of readers, believing that they will find THE LUMBERMAN of interest and value in their business. The nominal sum of one dollar per year covers the subscription price of both the weekly and monthly editions. Begin the new year by investing one dollar for 52 issues of THE LUMBERMAN.

## TWO CIRCULAR SAWS.

THERE is a noticeable difference in the tension of high-speed circulars. Saw-makers, like filers, differ in opinion on this point. Take, for instance, a 60 inch saw running 800 revolutions per minute. One saw-maker will send you a saw that can hardly be pulled through at the eye, while another will send a saw that will pull through much easier, while both saws have the same amount of tension, writes "Foreman" in the Wood-Worker. This looks contradictory to the average filer, indicating that one saw is too open while the other is not open enough. Keep in mind that both saws have the same amount of tension, but in different places. The first saw has the tension nearer the eye, while in the latter it is nearer the rim. These are not extreme cases.

Both saws will run fairly well. The first (which we will call No. 1) is the best saw and will give the best satisfaction, for several reasons. I have seen extreme cases of No. 2, where the filer and sawyer would declare such a saw would not run, yet it ran fairly well. The conclusion was, it was a "hard" saw, as it ran with "less" tension, while No. 1 would be considered a "soft" saw, requiring more tension.

Some filers in fast mills do not seem to understand this difference in saws when they are of the same temper. Take a saw while standing on edge and dish it back and forth. Notice carefully at right angles to its support and you will see that with saw No. 1 the stationary line will be fully 12 inches from rim, while in No. 2 it will be as close as six or seven inches to rim, showing that the latter has tension much nearer the rim. A talk with filers on this subject will surprise one. The majority claim that tension must be this near the rim for high speed, yet, as stated, saw No. 1, which is more open, is the best running saw. It will slab much better than No. 2.

I do not mean that the most open saws are always the best. There is a limit, and when it is passed the result is a broken saw at the eye. Some "experts" claim to be able to run a 56 inch saw at 800, with but little tension, on heavy feed, with plenty of power. A Texas filer runs a saw so open that it will come down to the floor before the centre will go through. Which is right? The filer who runs a saw with little tension at high speed has trouble and his saws run badly. He is compelled to hammer more than is necessary, for, as the wheel cuts down into the throat, the tension is removed.

Saw No. 1 requires but little tensioning after gumming. It is understood that we are now treating new saws as they come from the shop. Saw No. 1, as stated, gives the best results. I know of a saw firm that sends all its saws out hammered like No. 1; they all give satisfaction and do not break at the eye, unless some "expert" gets his "segment" hammering in on them. This saw is so tensioned that the average filer can wear it out in medium mills without getting "stuck." When it needs tension, opening it up a little about half way from rim to eye gives it the right amount.

Another firm sends out saw No. 2, as stated. It goes fairly well on the start, but the first heavy grinding causes a change, and presently it must be hammered. By this time it is accepted and paid for. If the right man hammers this saw all is well; if not there is trouble and lots of it. To open it up half way, as may be done with No. 1, will give only temporary relief; the saw will let down sooner than before. It may now be opened up at this place as open as No. 1, yet it will not take a slab well and will run off badly.

Along comes a man and applies his "infallible" rule and hammers it from rim right down to the eye. After a half day's hard work the saw goes very well. This man goes to the next mill and finds No. 1. It also needs hammering. He applies this "infallible" rule. The saw works very well, but presently this saw is broken. No one thinks it the filer's fault, as he had improved the saw and had it running nicely. The sawyer accounts for it. "The saw suddenly dodged out of the cut a little, and 'pop' it went."

As a rule, a 60-inch saw, properly hammered, should lean to almost a 45 degree position before the centre will drop through, though this is according to the power and feed. If it is driven up to 12-inch feed in hard pine, it should lean fully 45 degrees before the centre drops. A saw may be more open than this and run well, yet it is not as nearly perfect as it can be made. As stated, in extreme opening there is danger of a broken saw.

A filer may be deceived in saw No. 2 and conclude that it needs more tension. Opening it up a little makes it run worse. The only remedy is to let out the tension and then put it back near the collar. Saw-makers tell us to keep away from the collar. Generally speaking they are right, for it is an easy matter to do too much there, and then a lot of skilled work is required to get the saw right.

The British Columbia Mills, Timber and Trading Company have decided to rebuild their saw-mill at Vancouver, B.C. According to the present contracts part of the new mill will be completed by April, which will enable the company to resume its shipping business from that date while the remainder of the work is being completed. When the entire mill is finished it will have a capacity of 200,000 feet per day of ten hours. The William Hamilton Manufacturing Company, of Peterboro', Ont., will supply the machinery.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., DECEMBER 28, 1898 No. 49

**CANADA LUMBERMAN**

PUBLISHED BY

**The C. H. Mortimer Publishing Co'y of Toronto, Limited**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

Toronto, Canada
C. H. MORTIMER, Publisher
1895

THE above is a fac smilie of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED—12 x 12-30 feet White Pine Timber. THOS. MYLES' SONS, Hamilton, Ont.

**LUMBER WANTED.**

BASSWOOD, 500,000 FEET ONE INCH STUFF. TAYLOR, SCOTT & Co., Toronto.

BASSWOOD WANTED.

FOR IMMEDIATE SHIPMENT, AIR DRIED, 1", 1⅛" and 2" thick plump, square edge, rough, 12' long, 10⅞ 10' long. The 2" Bass could be round edges, random widths and lengths. "WHOLESALE LUMBER," Box 862, Bangor, Maine.

WANTED.

ROCK MAPLE BLOCKS FOR MANGLE ROLlers, car lots, sizes 26 in. x 6½ in, 22 in. x 6½ in., 26 in. x 5¾ in., and 22 in. x 5¾ in., first quality. State lowest prices loaded on cars, railway station; immediate delivery; state quantity.

BOX 222, CANADA LUMBERMAN.

FOR SALE.

SAW MILL COMPLETE, CAPACITY 25 TO 30 M. ft per day, with three block carriage, 60-inch saw mandrill and pu leys, double edger, trimmer and slash tab'e, log jack, with about 150 feet chain, 40 h.p. engine, 50 h.p. boiler, pulleys and belting, 3 lumber cars, 2 carts and a quantity of boom chain, all in good order. Apply, Box 68, Allandale.

**ENGINE FOR SALE.**

ONE HEAVY DUTY HIGH SPEED ARMINGton & Sims pattern Automatic Cut-off Engine, cylinder 19 in. diameter, stroke 30 in., 6 in. steam connection. This engine is capable of 200 horse power at 120 revolutions per minute; it is in good working order, and has been replaced by a heavier engine of greater capacity. For further particulars apply at once to the GUTTA PERCHA & RUBBER MANUFACTURING CO. of Toronto, Limited, 61-63 Front street west, Toronto.

### CURRENT TRADE CONDITIONS.

ONTARIO.

A slackening of the demand for lumber is permitting the trade to give the necessary attention to balancing up the business of the year and arranging plans for next season's operations. We believe the year 1898 has, in general, shown some improvement over its predecessor, although but few reports have as yet been received. One point, however, on which there is little doubt, and which is encouraging to the trade, is that the quantity of low grade pine in the hands of manufacturers is comparatively small. Even mill culls are not in heavy stock, and the price thereof is higher than it has been for some years. It is also true that for the last two years several of the mills in Ontario have not been in operation, and consequently the stock of lumber in the yards has been considerably reduced, if not cleaned out entirely. The shingle market is also strong and the supply light. The outlook at the close of the year, therefore, is not the darkest, more especially as there is a good prospect of a continuation of active building operations in 1899. Hardwoods continue to be sought after, all classes being in demand. No better indication of the scarcity of these woods can be found than the number of enquiries received at the office of this journal for stock of different kinds. There appears to be a desire to contract with mill men for their cut, evidently to ensure securing the necessary lumber for requirements.

MANITOBA AND BRITISH COLUMBIA.

Building operations are still being proceeded with in Manitoba, the Northwest, and British Columbia, and consequently some lumber is moving from retail yards. More than usual activity marks the closing days of a successful year, so far as the lumber trade is concerned. The outlook for next season is also promising. The improved condition of the west is attracting capital, and a number of new enterprises are likely to take definite shape in the spring, to the benefit of lumber manufacturers and dealers. An effort has been made on the Pacific coast to advance prices to a profitable basis, and at a recent conference of mill men $9 was decided upon as the figure for standard lengths, while $9.50 was suggested as the price of overlengths. Local trade is good, and the foreign demand is improving.

UNITED STATES.

The demand in the United States for lumber is much better than in December last year, and the tendency of the market is upwards. The east has recovered of late in an almost surprising degree, and the year will close with a satisfactory volume of trade to its credit. One feature of much significance is the demand for low grade boards in almost all kinds of lumber, but particularly in pine. This is due, in a measure, to the activity in box making. It is believed that the box requirement will continue for a year at least, so that there is no prospect that the demand will diminish in the near future. At the head of the lakes lumber is well sold out, and No. 3 and No. 4 boards have advanced in price. At Buffalo and Tonawanda dealers are closing the year in good spirits. There is a scarcity of box lumber, some grades of barn boards, and nothing is in full supply except cutting-up stock. Advanced prices are looked for before many weeks, or at least as soon as the spring trade commences to move. In New York, although the movement of stock is light, prospects are quite encouraging, and the market is firm. This is also the outlook at Pittsburg. The consumption of hardwoods is very large throughout the United States in the manufacture of agricultural implements, wagons, furniture, etc., and at the close of the year the situation is very strong. Perhaps the most activity is in the Eastern States, where there has been an industrial revival since the close of the Cuban war. Advanced prices for all the hardwoods are being obtained, and with dealers it is more a question of securing the dry stock than of getting orders. Basswood has taken on increased strength of late.

FOREIGN.

At the recent auction sales of wood goods in Great Britain there has been exhibited perhaps more than the usual eagerness to secure stock, and consequently the tone of the market is firm. All the wood-consuming industries have large orders on hand, although some of them are closed down for the holiday period. Shipbuilding on the Clyde is active, and deals landed by the steamers from Canada have been disposed of ex quay. In another column are given the results of a sale held by Churchill & Sim. In some instances the lumber was of inferior quality, which accounts for a slight depreciation in prices. In general, there has been a decided advance in spruce deals, and a tendency to strengthening of prices in the case of pine deals and some other lumber. Buying for next year is progressing as favorably as could be expected, and after the turn of the year more buoyancy is anticipated. The reports from other foreign markets tell of a quiet demand.

### STOCKS AND PRICES.

W. Cook and R. Oliver are taking out ties on Bedford Island, near Little Current, Ont.

William Hone, of Topping, Ont., has purchased 50 acres of timber land in the township of Stanley, Huron county.

L. P. Hovey is getting out 1,500,000 feet of spruce in Compton county, Quebec, for the Turner Falls Lumber Co.

Joseph Dobson, of Stoney Creek, N.B., is lumbering at Lower Hillsboro', and expects to get out 600,000 feet of deals.

Messrs. DeCew & Sons, who have purchased the Thornton stave factory at Fenelon Falls, Ont., are buying large quantities of elm logs.

Messrs. Turner and Coleman, of Euphemia township, Lambton county, have sold the elm timber on their farms to Wideman & Co., obtaining therefor $1,220 and $750 respectively.

The Rat Portage Lumber Company is said to have purchased all the lumber of

the Graham, Horne & Co. estate at Fort William, Ont. Mr. Graham has been appointed local manager.

J. Davidson, of Ashland, Wis., has closed a contract to cut 4,000,000 feet of logs for Mr. McCaul, the waney board operator.

The Dock Department of New York city opened bids last week for 1,643,872 feet of yellow pine, and awarded the contract to Cooney, Eckstein & Co., at $15.93 per thousand feet, delivered.

The tug St. Clair arrived at the Brunette saw mills, New Westminster, B.C., recently, with 733,000 feet of logs. This is the largest raft of logs which has ever been received at the Brunette mills.

It is estimated that at least 3,500 men are working in the woods on the Kennebec waters, and that the season's cut, including saw logs and pulp wood, will reach 100,000,000 feet, against 97,000,000 feet last year.

Cockburn & Son, of Sturgeon Falls, Ont., have contracted with the Sturgeon Falls Pulp Co. to take out a large quantity of pulp wood. They will cut 5,000 cords this winter, and 10,000 cords in each of the two succeeding years.

Next to Chicago, Cleveland has been the largest buyer of coarse white pine stock along the chain of great lakes. The present holdings are believed to be fully 25 per cent. above those of one year ago, or in the neighborhood of 125,000,000 feet.

New York dealers report having received enquiries for a considerable quantity of box shooks required in Argentina, Brazil, the British West Indies, and Porto Rico. It is estimated that from 15 to 18 car loads will be required immediately.

At Manistee, Mich., prices on hemlock are especially good. There has recently been experienced a considerable growth in demand for hemlock in the northwestern states, no doubt due, in a measure, to the comparatively high price of Norway and white pine dimension.

John Connelly, of Lake Bennett, B. C., will apply to the Chief Commissioner of Lands and Works for a license to cut timber on 960 acres of land situated on the bank of Pine creek, in British Columbia. Oliver Rolston will also apply for permission to cut timber on a similar berth.

There were received at North Tonawanda, N.Y., during the year now closing 349,463,600 feet of lumber and 60,674,500 shingles. In 1897 the receipts were 415,114,450 feet of lumber and 46,501,200 shingles. At Tonawanda there were received 119,653,878 feet of lumber in 1898 and 169,722,000 feet in 1897.

Eastern buyers have lately purchased some stock at Menominee, Mich., to be shipped by rail. One firm sold 500,000 feet of green mill culls, to go to Chicago, at the price of $7.50 on cars. The box manufacturers are buying up all the lumber in the market that can be used in their business, which will practically clean up all the No. 3 and No. 4 boards.

It is stated that never in its history has there been such a boom in hardwood lumber in Michigan. Ash, oak, elm, basswood and soft maple are from $2 to $5 a thousand higher than they were two years ago. The sale of 40,000 feet of basswood was recently made at Saginaw at $17, whereas two years ago not more than $13 could have been obtained for the same stock. Another sale of 85,000 feet of hardwood is noted at advanced prices.

The Assiniboine Lumber Co., of Brandon, Man., have sent a large gang of men to their timber limit on the Saskatchewan river. The company have this year put in a portable mill, with which they will cut the timber in the locality where it is felled. The ties will be floated down the Saskatchewan river to Minnedosa and there loaded on cars. The Shell river cut of timber will be floated down the Assiniboine river to the saw mill at Brandon.

The lumber market at Boston has gained strength, owing to an understanding which has been reached by the spruce manufacturers in the matter of quotations. There is now a fair profit on such sales as are being made, and the prospects are considered favorable for a better trade next year. Plans have been prepared for a number of buildings to be erected in the city and suburbs during the next twelve months, and throughout the factory cities and towns of New England there is considerable industrial activity.

According to the Northwestern Lumberman, there were received at Michigan ports during 1898 246,090,441 feet of Canadian logs, as follows: Saginaw river, 155,000,000 feet; Detroit, 10,000,000 feet; East Tawas, 9,800,000 feet; Alpena, 17,500,000 feet; Cheboygan, 46,700,000 feet; total, 238,800,000 feet. A comparison of the logs rafted from Canada shows the following: 1893, 184,500,000 feet; 1894, 301,000,000 feet; 1895, 279,229,943 feet; 1896, 279,388,654 feet; 1897, 252,344,532 feet; 1898, 238,843,024 feet.

## SALE OF CANADIAN LUMBER.

At a recent auction sale held by Messrs. Churchill & Sim, at London, Eng., Canadian lumber of the dimensions given below sold as follows:

PINE.—Ex Milwaukee, from Quebec—6-13 ft., 3 x 6 in. 1st bright white pine, £14 15s; 6-13 ft., 3 x 5, £14 15s; 7-13 ft., 3 x 4, £13 10s and £13 5s; 6-16 ft. 3 x 6 4th bright white pine, £5 5s and £5 10s; 6-16 ft., 3 x 5, £5; 6-16 ft., 3 x 4, £6; 6-16 ft., 3 x 4-6, £5 5s; 6-13 ft., 3 x 4-6 1st white pine, £5; 6-16 ft., 3 x 6 4th white pine, £5. Ex Marino, from Quebec—6-8 ft., 3 x 10 1st bright white pine, £14 5s; 6-8 ft., 3 x 9, £14 10s; 6-8 ft., 3 x 8, £13 15s; 6-8 ft., 3 x 7, £13 15s. Ex Yola, from Quebec—10-11 ft, 3 x 11 1st bright white pine, £19 15s; 9 ft., 3 x 11, £16; 9-13 ft., 3 x 12-20, £17 5s; 9-11 ft., 3 x 9-10, £13; 9 ft., 3 x 7 and 8, £11 10s; 8 ft., 3 x 11-21, £15 10s; 6 ft., 3 x 11-27, £10 15s; 6 ft. 3 x 5-10, £9. Ex Progressist, from Quebec—12-16 ft., 3 x 12-28 2nd bright white pine, £14 5s; 9-11 ft., 3 x 12-25, £13; 10 ft., 3 x 12-26, £12 15s; 9-16 ft., 3 x 11, £13 15s; 16 ft., 3 x 10, £11 5s; 12 ft., 3 x 10, £11; 12-16 ft., 3 x 7-9, £10; 6-11 ft., 3 x 7-22, £10 5s. Ex Montezuma, from Quebec—16 ft., 3 x 11 3rd white pine, £7 10s; 12-16 ft., 3 x 11, £7 10s; 6 ft., 3 x 6 1st white pine, £12 10s; 6 ft., 3 x 5, £12 10s; 6 ft., 3 x 4, £12 5s. Ex Lokoja, from Quebec—12-16 ft., 2 x 12 1st white pine, £19 10s; 12-16 ft., 1½ x 12, £19 and £18 15s; 12-15 ft., 1 x 12, £17 10s; 11-13 ft., 1 x 12, £17 5s. Ex Hazelmoor, from Quebec—12 ft., 3 x 11 in. 1st white pine, £18; 13 ft., 3 x 11, £18 and £17 10s; 13 ft., 3 x 9, £17 10s.

SPRUCE.—Ex Progressist, from Quebec—12 ft., 3 x 9 2nd spruce, £7 10s; 11-16 ft., 3 x 9, £7 5s; 12 ft., 3 x 10 3rd quality, £6 15s. Ex Cameo, from Quebec—13-16 ft., 1¼ x 9 2nd quality, £8 15s; 14-16 ft., 1 x 9, £8 15s. Ex Madura, from Saguenay—5-8 ft., 3 x 8 and 11 in. 1st, 2nd and 3rd quality, £6 15s; 4-8 ft., 3 x 9, £6. Ex Turania, from Quebec—13 ft., 3 x 9 in. 2nd quality, £7 10s and £7 5s; 12 ft., 3 x 9, £7 10s. Ex Chatfield, from Quebec—11-17 ft., 4 x 8 unassorted white, £6 5s. Ex Kirriemuir, from Quebec—13 ft., 3 x 9 bright white spruce, £5 10s; 11 ft., 3 x 9, £5 10s; 10-16 ft., 2 x 8 and 9, £5 5s. Ex Cheronea, from St. John, N.B.—12-16 ft., 3 x 11 1st, 2nd and 3rd quality, £6 5s.

## SPRUCE VS. WHITEWOOD.

The West Hartlepool correspondent of the Timber News, of Liverpool, Eng., thus refers to the competition between spruce and whitewood: "Prices are well maintained, and whitewood is, if anything, a little firmer, though the arrival of another spruce cargo may have a slightly depressing effect. This is the fourth or fifth cargo of spruce imported here during the present season, and there are now fair stocks in the port. We expressed the opinion at the beginning of the year that the question as to whether spruce would find a ready market in this district depended very much upon the quality of the spruce brought in, and now that we have seen what it is like and can report that, though the quality has varied a good deal, the goods, on the whole, have presented a fairly attractive appearance, we can only say the question is still a very doubtful one. The opinion expressed by consumers is by no means unanimous; but, so far as we can gather, if dressed goods are required, whitewood is much preferred. The fact remains, however, that in quoting for whitewood, the strong competition of spruce has had to be taken into consideration, and this has not tended to strengthen the position of whitewood."

## THE BARBADOS MARKET.

Recent circulars to hand review the Barbados lumber market as follows:

WHITE PINE.—There have been several arrivals during the fortnight; the Grace Rice from Liverpool with 107 M shipping and 35 M 2nd quality, was sold for St. Vincent. On 28th November we had the Oasis, from Shelburne, with 56 M shipping, 11 M 2nd quality, which we placed locally at $22.16 and $16.30 respectively, and on the following day the Trader arrived from same port with 94 M shipping, which we sent on in vessel to Trinidad. On 5th inst. the Arthur V. S. Woodruff arrived from Calais, Me., with a small lot of 20 M ft. 2nd quality (cargo principally shingles), which was of very inferior quality, and was sold at $10.16 with all faults. We have since had the Alma and Eva May, both from Port Williams, N. S.; former had 85 M shipping and 58 M 2nd quality, which we placed at $22.26 and $16.30 respectively, and latter 98 M shipping and 54 M 2nd quality, which we have sold at $22.30 and $16.30 respectively. Dealers are all now fairly supplied, and as demand is beginning to slacken, will hardly continue increasing their stocks at these rates.

SPRUCE.—The only arrival of boards is a small lot of 38 M shipping, and 8 M. 2nd quality by the Alma, which we placed at $18 and $14 respectively. The Woodruff had 25 M scantling, which we sold at $16.26, with all faults. The demand for spruce boards generally sets in about this or next month.

SHINGLES.—Cedar—Gaspe, last sale at $5.54; spruce laying, $2.25; cedar laying, $2.76½; cypress, $8.50 and $6.50 for 6-inch hearts and saps, ex Cora.

## CONDITIONS IN BRITISH COLUMBIA.

A recent issue of the News-Advertiser, of Vancouver, B.C., contains the following: Mr. W. A. Ward has just returned from San Francisco, where he attended a conference of lubmermen, at which the majority of the mills agreed to maintain a price of $9. The Chemainus mills, however, stayed out of the arrangement. The advance from $8 to $9 per M for a 12.26 log, which was made the standard length, with $9.50 for overlength, was probably made on account of the large number of orders on hand and the anticipated demands of China and Siberia. Mr. Ward is of the opinion that some action should be taken by the Government to have the pilotage charges and the consequent extra charges of the American tugs in bringing shipping here reduced, as this greatly handicaps the British Columbia mills. The American lumber carriers now ask 1s 3d extra to take a cargo at a British Columbia port as compared with the Sound, and in this they were upheld by the conference. The representatives of the British Columbia mills held that they are entitled to a differential, and the conference finally resolved to allow the British Columbia mills the 1s 3d, or to put them on an equal standing with Puget Sound in regard to charges. Mr. Ward says the Americans, knowing that the British hold of the carrying trade of the Atlantic is secure, are fighting strenuously for the commerce of the Pacific. Shipping charges, wrecking and coasting laws, are still framed to give the American shipping the fullest advantage. Ships are everywhere being put under their flag and trade is being created for them. The great encouragement given the American mercantile marine is rapidly building it up, and Canada must move speedily to protect her interests in the Pacific.

The president of the United States has issued an executive order fixing the customs tariff for the island of Cuba, to go into effect January 1st, 1899. The lumber schedule shows that the duty on boards, deals, rafters, beams, round wood and timber for ship-building is 40 cents per cubic meter, equal to 94⅓ cents per thousand feet board measure. It is expected that there will be much activity in house building in Cuba, and that a considerable quantity of lumber will be required for that purpose.

Attention is directed to the changes and additions in the lumber freight rates of the Canadian Pacific Railway, as published on the third page.

## LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts. per 100 lbs. Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2 20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

The rates at present in effect on the Canadian Pacific Railway to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. The rates are based on a minimum of 30,000 lbs. per car."

Summer rates to New York, via Albany and barge line, expired on November 28th, owing to closing of navigation on the Hudson river, and the usual all rail rates became effective, as follows: To New York, for track delivery, and all points on the Hudson river, of the New York Central and West Shore railways, from Ottawa, Hull, Aylmer, Deschenes Mills 15c. per 100 lb.; from Carleton Junction, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including litherage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

Summer rates to Montreal expired on November 15th, and the usual winter rates became effective as follows: From Ottawa, Hull, Aylmer and Deschenes Mills, 5c.; Carleton Junction, 6c.; Arnprior and Braeside, 7c.; Renfrew, Eganville and Pembroke, 8c. The rate to Three Rivers is 4c. and to Quebec 5c. over the rate to Montreal. The minimum car load in all cases where rates are computed on a weight basis is 30,000 lbs.; when on a measurement basis 10,000 feet B. M.

The C.P.R. also make the following rates on seasoned pine lumber to West St. John, N B., for export: From Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, $3.75 per M feet; Carleton Junction, Braeside and Arnprior, $4.00 per M feet; Renfrew, Douglas, Eganville and Pembroke, $4.50 per M feet. On lumber for local consumption at St. John, N B., and common points the rate is 20 cents from Ottawa, Hull and Aylmer, and to Halifax 21 cents from same points. On seasoned pine lumber the rate from Ottawa to Oswego, N.Y., is $1.90 per M feet, and to Syracuse, N.Y., $2.20 per M feet; from Ottawa to Buffalo, 12 cents and to Detroit 14 cents per 100 lbs.; to Boston, Mass., and common points, 15 cents from Ottawa, Hull, Deschenes Mills and all points east thereof; 16 cents from Carleton Junction; 17 cents from Arnprior, Braeside and Renfrew, and 18 cents from Eganville and Pembroke, and proportionate rates from points further west on lumber or consumption in the United States. The export lumber rate is 13 cents from Ottawa and Hull, 14 cents from Deschenes Mills, Aylmer and Carleton Junction, and 15 cents from Arnprior and Braeside to Boston.

## CANADIAN EXPORTERS AND WHOLESALERS

**Keenan—— Brothers**
*OWEN SOUND, ONT.*

# THE RETAILER AND Wood-Worker

## WOOD-WORKING FACTORIES OF MONTREAL.

REVIEWING the woodworking industries of Montreal, the Herald remarks that there are many allied trades which make an aggregate lumber business the size and importance of which is not generally realized. Scattered over the city of Montreal are planing mills, sash and door factories, and lumber yards which supply builders with the finished woods. A favorite site on account of the facilities for transportation by rail and water is along the canal bank. Here, for example, at the corner of Napoleon and Tracey streets, is the business established about ten years ago by Mr. Toussaint Prefontaine and incorporated last spring under the name of T. Prefontaine & Co., Limited. The company has extensive yards on each side of the canal, and carries a large and varied stock valued at over $75,000. The planing and moulding mill is equipped with the most improved machinery. Mr. Prefontaine has been in the lumber business for over 25 years, and having a wide connection in the country, he is able to control a large outside trade, shipping direct to country firms from the yards in Ottawa.

At 469 William street is the well furnished yard of V. Pauze & Son, who acquired it from End, Metayer & Company a couple of years ago. Their mills are at 193 St. Urbain street. The firm, in addition to carrying on an extensive general lumber trade, are among the largest contractors of the city. They built the woodwork of Laval University, the church of St. Louis de France, and the church of the Blessed Sacrament, and at the present time are engaged on a block of six houses on St. Denis street, a school for the nuns of Maisonneuve, additional storey to the Jacques Cartier bank, extension to the Ville Marie bank on Notre Dame street, a large extension to the Grey nunnery on Dorchester street, and other important works.

John A. Bulmer & Company, who established their business as long ago as 1871, had for some years a number of yards, but have lately concentrated their business at the corner of Dorchester and St. Charles Borromee streets, finding the locality best suited for the requirements of their trade. The firm makes a specialty of mahogany, quartered oak, quartered sycamore, and all kinds of hardwoods. They are also well equipped with kilns, and make a further specialty of kiln-dried maple flooring. In addition to a large local trade, the firm ships extensively to other points.

Mr. Damase Parizeau is one of those French-Canadian merchants who, with little or no capital at the outset, save what he had saved himself, has succeeded in establishing himself in the front rank of Montreal's lumber merchants. He has been president of the Chambre de Commerce, and sat four years in the Quebec legislature for the St. Louis division of Montreal. He does a large lumber business, and has yards at 512 Lagauchetiere street, at the Lachine Canal Basin, and in St. Louis du Mile End.

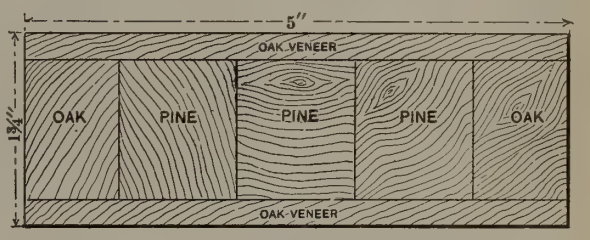
### ALEXANDER MACLAREN.

Situated within easy distance of the lumber wharves at Maisonneuve is the extensive lumber factory of Alexander MacLaren, 107 Papineau avenue, a view of which is shown. Mr. MacLaren lives at Buckingham, Que., but his manager, Mr. Ashley P. Twidale, attends to all the details of the business in Montreal. The firm manufactures doors, windows, blinds, mouldings, etc., and deals in rough and dressed lumber, and hard and soft woods of all grades. Kiln-dried lumber is a specialty. Mr. MacLaren has one of the best equipped dry-kilns in the city, the capacity of which is two hundred thousand feet. Estimates are made on all kind of factory work, and the establishment carries a full line of foreign woods, such as Indiana quartered oak, mahogany, sycamore, etc. The doors and windows of the new mining building of McGill University and the wood-work for the new London and Lancashire Insurance Co.'s building on St. James street, on the site of the old Barron block, were supplied by this concern. The advantageous situation of the factory in respect of shipments by water is being utilized by Mr. Twidale, who intends to cultivate the export trade to England in doors, blinds, mouldings, hardwood, etc. There is a strong demand in the English markets for the finer qualities of lumber, and Mr. Twidale is confident that the superiority of his firm's products will be quickly recognized as soon as they have been properly introduced.

FACTORY OF ALEXANDER MCLAREN.

## CONSTRUCTION OF VENEERED DOORS.

IN order to make a good veneered door which will not warp it is first necessary to glue up a core, which will be the foundation for the veneers. Use white pine for the cores and let it be well seasoned. The quality need not be the best, as common pine will do. In making cores proceed in the following manner: Rip ⅞ inch pipe into strips 1½ inches wide and glue enough of them together to form the width of stile or rail. The outside strips will have to be of the same wood as the veneers, unless the doors are to be flush



SECTION OF STYLE OF DOOR.

molded, in which case the outside edges of the stiles only need be the same as the veneers. After the glue has become hardened take the cores to the wood worker and face and join them. Next take them to the planer and run them to 1¼ inches thick, though perhaps it would be better to rip the stuff 1⅝ inches wide, leaving ⅜ inch to work on, for these cores must be perfectly straight and out of wind. If proper care is taken when gluing up they can be kept pretty straight so that less timber will do to work on. Make veneers 5/16 inch thick and glue on before framing the door, because it is much easier to lay the veneers on the stiles and rails than it would be after the door was put together. Having followed the directions thus far, the stuff will now be 1⅞ inches thick, giving ⅛ inch to work on. Take the stuff to the wood worker once more and take off a light cut to remove all defects. Join one edge and rip to the proper width. Also dress to 1¾ inches thick, leaving the veneers about ¼ inch thick. For making a thicker or thinner door enlarge or reduce the core as circumstances require. The accompanying sketch represents a section of the stile of a door, which will help to explain my meaning. This shows three pine and two oak strips, but it might be better to use four pine and two oak, all ⅞ inch thick, for a 5 inch stile. The writer of this has been engaged in planing mill work for the last fifteen years, and this is the method used in making veneered doors for the market.—Carpentry and Building.

## WEIGHT OF LUMBER.

THE average weight of one thousand feet of lumber is usually reckoned as follows:

| | Dry. | Partly Seasoned. | Green. |
|---|---|---|---|
| | Lbs. | Lbs. | Lbs. |
| White pine, whitewood and basswood. | 2,700 | 3,000 | 3,500 |
| Butternut, chestnut, red pine, yellow pine, hemlock, spruce and tamarac.. | 3,000 | 3,500 | 4,000 |
| Ash, elm, maple, cherry..... | 3,500 | 4,000 | 4,500 |
| Oak, walnut, hickory, birch and beech. | 4,000 | 4,500 | 5,000 |

## NATIONAL HARDWOOD INSPECTION RULES.

THE National Hardwood Lumber Association of the United States held its first annual meeting in Cincinnati, Ohio, a few weeks ago, at which there were present over 200 persons from all sections of the country. The national rules for the inspection of lumber as adopted at the meeting last spring were revised, and some slight alterations made thereto. At the request of some of our readers, we publish herewith the rules, as finally adopted, relating to the kinds of lumber most common to Canada :

### GENERAL INSTRUCTIONS.

STANDARD GRADES.—The standard grades of hardwood lumber are firsts, seconds, common and culls, except as otherwise specified. When firsts and seconds are combined as one grade there shall be at least 33⅓ per cent. of firsts. Lumber below the grade of culls shall be classed as mill culls.

STANDARD LENGTHS.—The standard lengths are 6, 8, 10, 12, 14, 16, 18 and 20 feet, except as otherwise specified. Most lumber is handled in lengths of 10, 12, 14 and 16 feet. Odd lengths, such as 9, 11 and 13 feet, shall be measured back to the next even lengths, except when otherwise specified. In the grade of firsts and seconds the lengths are from 10 to 16 feet, and there must not be over 10 per cent. of 10 foot lengths, unless otherwise stated.

STANDARD THICKNESS.—The standard thicknesses of lumber are ⅜, ½, ⅝, ¾, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.

STANDARD DEFECTS.—One knot 1¼ inches in diameter; two sound knots not exceeding in extent or damage one 1¼-inch knot; one inch of bright sap, except when otherwise specified; one straight split, not exceeding in length, in inches, the surface measure of the piece in feet, except as otherwise specified; worm or grub holes not exceeding in extent or damage one 1¼-inch knot, except as otherwise specified.

Ordinary season checks are not considered defects. Black stains, heart shakes, rots, dote and unsound knots over 1¼ inches in diameter are considered serious defects, reducing to a grade lower than firsts and seconds.

SPECIAL INSPECTION.—Log run means the full run of log with mill culls out. Common and better means the full run of log with culls and mill culls out. Common and better must contain at least 50 per cent. of firsts and seconds. Merchantable means the full run of the log with mill culls out, and that the common and better shall be measured full and culls one-half.

### ASH.

Grades : Firsts, seconds, common and culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long and free from all defects except in pieces 10 inches and over wide, which may contain one standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Firsts and seconds 18 feet and over long will admit of 5-inch widths.

Firsts and seconds will admit of 10 per cent. of 10 foot length.

All tapering lumber 20 feet and over long to be measured one-third of the distance from the narrow end.

Commons are 5 inches and over wide, 8 feet and over long. 5-inch pieces must have one face clear. Pieces 6 inches and over wide must be of sound character and work ¾ clear.

Culls are 3 inches and over wide, 6 feet and over long, and include all lumber not equal to the grade of common that will work one-half without waste.

### BASSWOOD.

Grades : Firsts, seconds, commons and culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long and free from all defects except in pieces 10 inches and over wide, which may contain one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 4 inches and over wide, 8 to 16 feet long. Four inch pieces must have one face clear and two clear edges. Pieces 5 inches wide must have one clear face. Pieces 6 inches and over wide must work three-fourths clear in not over three pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half without waste, of sound cutting, in not more than three pieces.

NOTE.—Black spots or streaks are a serious defect, and inspectors shall be careful in estimating their damage. If they are excessive they will reduce the piece one or more grades.

### BEECH.

Grades : Firsts, seconds, commons and culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long. 3 and 4 inch pieces must have one face clear and two square edges, 5 inch pieces one face clear. Pieces 6 inches and over wide must be of sound character and work three-fourths clear in not more than two pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear not to exceed three cuttings. No piece to be less than 3 inches wide nor less than 2 feet long. Pieces 3, 4 and 5 inches wide must be sound.

### BIRCH.

Grades : Firsts, seconds, commons and culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have 3 standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long. 3 and 4 inch pieces must have one face clear and two square edges, 5 inch pieces one face clear. Pieces 6 inches and over wide must be of sound character and work three-fourths clear in not more than two pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear, not to exceed three clear cuttings. No piece to be less than 3 inches wide, nor less than 2 feet long. Pieces 3, 4 and 5 inches wide must be sound.

Red birch shall be not less than 75 per cent. red on one side. 4 and 5 inch strips shall have one face all red. Otherwise the grades shall be governed by the grades of ordinary birch.

### ROCK ELM.

Grades : Firsts, seconds, commons and culls.
Lengths, 6 to 16 feet.
Widths, 4 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts and seconds are 4 inches and up wide, 8 to 16 feet long, not to exceed 20 per cent. shorter than 12 feet; 4 and 5 inch pieces must be clear. Pieces 6 inches and up wide must be sound and work 80 per cent. clear in not more than two pieces. The grade of firsts and seconds must have 25 per cent. of clear lumber, 6 inches and up wide and 10 feet and up long. Straight splits the width of the piece will be admitted into the grade of clear.

Commons must be 4 inches and up wide, 6 to 16 feet, not to exceed 20 per cent. shorter than 12 feet, and must work two-thirds clear in not more than three pieces.

Culls must not exceed 40 per cent. less than 12 feet, and work 50 per cent. clear in not more than four pieces.

### SOFT ELM.

Grades : Firsts, seconds, commons and culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defects except in pieces 10 inches and over wide, which may contain one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 4 inches and over wide, 8 to 16 feet long. 4 inch pieces must have one face clear and two square edges. Pieces 5 inches wide must have one clear face. Pieces 6 inches and over wide must work three-fourths clear in not over three pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half without waste, of sound cuttings, in not more than three pieces.

NOTE.—Black spots or streaks are a serious defect, and inspectors shall be careful in estimating their damage. If they are excessive they will reduce the piece one or more grades.

### MAPLE.

Grades : Firsts, seconds, commons and culls.
Widths, 3 inches and up.
Lengths, 6 to 16 feet.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts shall be 8 inches and up wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds shall be 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long; 3 and 4 inch pieces must have one face clear and two square edges; 5 inch pieces one face clear. Pieces 6 inches and over wide must work three-fourths clear in not over two pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear without waste, in not to exceed three pieces. Pieces 3, 4 and 5 inches wide must be sound.

Maple strips are 3, 4, 5 and 6 inches wide, 6 to 16 feet long.

Grades : Clear, commons and culls.

Clears strips are 10 to 16 feet long, and must show one face clear and two good edges.

Commons are 8 to 16 feet long, not to exceed 20 per cent. shorter than 12 feet, and will admit of one standard defect showing on both faces.

Culls are 6 feet and over long, and shall work one-half clear in not more than three cuttings, no cutting to be less than two feet in length.

---

Mr. Eldoras Todd, of Brantford, Ont., in renewing his subscription to THE CANADA LUMBERMAN for 1899, writes; "This is the tenth year I have taken THE LUMBERMAN, and I would not be without it for double its cost. You are improving it every year. Wishing you success in the year to come."

# THE NEWS.

—H. A. Kribs, M.P.P., purposes starting a box factory at Galt, Ont.

—R. Truax, of Walkerton, Ont., recently purchased a saw mill in Bentinck.

—E. W. Benjamin, of Yarker, Ont., talks of starting a hub factory at Arnprior.

—James McLellan was seriously injured in a logging camp near Vancouver, B.C.

—Harvie & Co., of Toronto, may establish a box factory on the Chaudiere at Ottawa.

—The Sicken Lumber Company, of Sombra, Ont., have lately put in a band saw and jointer.

—R. F. Hicks, of Norwich, Ont., will probably branch out into the manufacture of staves.

—Armstrong Bros., of Markdale, Ont., are making extensive improvements to their saw mill.

—F. Austin & Sons, of Haliburton, Ont., are about to establish a saw and shingle mill at Baptiste.

—Thomas and William Swift are carrying on extensive lumber operations at West Adamsville, N.B.

—Rider & Kitchener, of Brampton, Ont., will probably remove their excelsior and veneer factory to Lindsay.

—Cromwell Bros., of High Forest, near Sawyerville, Que., are adding to their saw mill a pulp wood peeler.

—Robert Lafontaine, of Brigham, Que., purposes building a sash and door factory in connection with his mill.

—A lumberman named Sampson was killed by the fall of a tree at Kelly's lumber camp near Rat Portage, Ont.

—J. Gregory has leased Cook's saw mill at Howich, Ont. He purposes starting a planing mill in connection therewith.

—H. A. Clemens & Company have taken over the planing mill and sash and door factory of Wideman & Clemens, Guelph, Ont.

—A Rat Portage paper states that the Rat Portage Lumber Company are making preparations to refit and improve their saw mill at Norman, Ont.

—Sewrey's foundry at Barrie, Ont., has been purchased by Dyment & Butterfield, who will manufacture saw and shingle mill machinery, boilers, engines, etc.

—Among the enquiries received at this office is one from a correspondent at Rat Portage, Ont., asking for the address of mills manufacturing clear spruce.

—A. Beaulieu, saw mill owner of St. Benoit, Que., and his family were almost blown up by an evidently designed explosion. The side of the house was torn out, but fortunately no one was injured.

—Wm. Fraser, an employee of Sutherland, Innes & Co., Chatham, Ont., was struck by a falling tree in the woods near Glencoe, and instantly killed. His companion, named McEachren, was severely injured.

—Paradis & Belly, of Quebec, are about to start a factory at Chicoutimi, Que., for the manufacture of boxes for butter, cheese and condensed milk, and are negotiating with a Swiss company for a large contract.

—In the Holland river, near Bradford, Ont., there has been found a number of white oak logs, which have at various times been lost while towing for shipment. These logs are being raised, and sold. They are sound and said to be worth $50 a thousand.

—The Gilmour Company, of Trenton, Ont., propose to increase the capacity of their sash, door and blind factory, and build a box factory. The town has been asked to assist to the extent of a $10,000 bonus, to be voted on by the ratepayers on January 2nd.

—A number of lumbermen, including Senator Snowball, of Chatham, Willard Kitchen, of Fredericton, and J. L. Black, of Sackville, N.B., have secured a controlling interest in the Woodstock Gold Mining Company, of Forest Hill, Guysboro, N. S., for $22,800.

—Tenders will be received until noon on Monday, the 16th day of January, for a permit to cut timber on Berth No. 831, in the province of Manitoba, containing an area of one square mile, more or less. Tenders to be addressed to John R. Hall, Department of Interior, Ottawa.

—The British Columbia Wood Oil Company, of Port Moody, B.C., whose mill was recently destroyed by fire, had just made the first shipment of the commodity known as oil of cedar. The patents covering the process of manufacture have still four years to run, and if Mr. McDonald can obtain any new capital, it is understood he will rebuild.

—H. Elderkin & Co,, of Port Greville, N.S., have men in the woods getting out the frame of a three-masted schooner of about three hundred and fifty tons register, which they intend building next summer. They also have a small coasting schooner of about sixty tons nearing completion.

—The late Robert Hamilton, lumber merchant, Quebec, who died in September last, left an estate valued at $2,027,240. The trustees are his son, John Hamilton, gentleman, of Quebec; his brother, Right Rev. Charles Hamilton, Lord Bishop of Ottawa; and Walter Pringle Cassels, Q.C., of Toronto, his son-in-law.

—George Long has purchased the Sherbrooke, Que., Grained Lumber Co.'s business from H. Silver & Son. The company own a process for making grained lumber for finishing in imitation of the more expensive woods. Mr. Long purchased the sole right for the manufacture and sale of the lumber in the eastern townships of Quebec.

—At the annual meeting of the Madawaska Improvement Company, held in Ottawa on December 14th, Mr. J. R. Booth was re-elected president, and Mr. G. B. Greene, secretary. The following board of directors was elected: Messrs. J. R. Booth, Alexander Fraser, C. B. Powell, M.P., E. H. Bronson, and Claude McLachlan.

—To mark the closing for the season of the Longford Lumber Company's saw mill at Gravenhurst, Ont., an entertainment was tendered the employees by the manager, Mr. William Thomson. Refreshments were partaken of, after which an address was presented to Mr. Thomson, in which expressions were not lacking of the appreciation by the employees of his kindness and consideration.

—The High Commissioner at London, Eng., announces that he has received enquiries for the following: From Sweden, from a firm desiring to import spruce boards from Canada, to be perfectly free from knots; Antwerp, from a firm wishing to represent Canadian timber exporters in that city; for woodenware and manufactures of wood from a Manchester firm, who desire to be placed in communication with exporting houses in Canada, with the object of opening up business relations.

—An Ontario charter of incorporation has been granted to the North Shore Timber Company of Port Arthur, Ont. This firm is the outgrowth of the firm of Hazlewood & Whalen, pulp wood contractors. The new company is capitalized at $60,000. The members of the company are P. Weidner, E. W. Voight, O. L. E. Weber, A. K. Kiefer, of Detroit, Mich., and R. A. Hazlewood and James Whalen, of Port Arthur. The object of the company is to carry on a general lumbering and pulp wood business.

—Mr. G. P. Magann, of Toronto, has entered an action for $22,500 against the Grand Trunk Railway Company. The plaintiff, who is a tie contractor, alleges that when last spring he proceeded to Saugeen peninsula, on the shores of the Georgian Bay, to ship some 75,000 ties which he had there, he discovered that they had been taken away by the Grand Trunk Railway Company, who claimed to have received them from one of their contractors. Mr. Magann therefore took action to recover the value of the ties.

—The British Consul at Windsor, Ont., has the following to say regarding exports of staves: "The timber in this district being almost entirely hardwood, and the elm found here being especially fitted for cooperage stock, the stave industry has thrived for the past fifteen or twenty years; but the elm forests are rapidly becoming depleted; 150,000,000 feet only of the original stumpage still remain, and it is only the matter of a few years before the manufacture of elm staves will cease. The recent increase in the United States' duty on staves has not stopped their export."

—A Michigan man is considering the establishment of an excelsior factory at Woodstock, N.B. According to an exchange he estimates the cost of making six tons of excelsior as follows:

| | |
|---|---|
| 6 cords wood at $3.00 | $18.00 |
| 3 men on machines | 3.75 |
| 2 men on saws | 2.50 |
| 2 boys | 1.00 |
| 1 foreman | 2.50 |
| Wire for bailing | 15 |
| Power | 3.00 |
| Total | $30.90 |

## USEFUL INFORMATION.

A rule by which to estimate the power of a double belt is given as follows: Divide the number of square feet that passes over one of the pulleys in a minute by 40. The result will be the power that it can develop. The authority which gives it says that it does not contain many fine points, but the results are just as reliable as those obtained by more complicated methods. Probably this is true.

OIL FOR BOILER SCALE.—The use of oil as a scale remover in steam boilers is treated in an article in a recent issue of The Locomotive, the conclusions of which are summed up as follows: Mineral oil is often useful for the prevention or removal of scale, when it is properly applied; in the prevailing method of introduction, it gives good results in many cases; but when it has not proved as effective as desired, we recommend that the boiler be dried out and that the kerosene be sprayed upon the plates and tubes. It is important to avoid the use of open lights in or about a boiler that is being so treated; incandescent electric lights are the safest to use. Finally, kerosene is very serviceable for removing lubricating oils from plates and tubes.

FITTING SMALL BAND SAWS.—The care of scroll band saws has become a fine art. Saws of good quality can now be used until worn out without breakage other than by accident. Among the chief causes of breakage, located in the saws themselves, are crooked brazes, irregularity in the width, size of teeth or set, saws stretched too much on one edge, and saws crooked either on tooth or back. All of these defects will be eliminated by an intelligent use of the best filing room tools. Such appliances are money savers in any shop, and the larger the number of band saws in use the better interest they return. There are four points on the machine which are responsible for many broken saws: The friction of back of saw against a metal guide, which crystallizes the back and causes flaws; a ragged covering on the face of the wheels; the lack of alignment of wheels, and a lack of sensitiveness or overloading in the straining device.

ROPE TRANSMISSION.—In a paper on power transmission by ropes and belts, read before the French Society o Civil Engineers, V. Dubreuil states that one great ad-f vantage possessed by ropes is that cyclical variations in the speed of the driving pulley are "damped" by the ropes, so that the speed of the driving pulley is much more uniform than that of the driver. Ropes are also useful when the two lines of shafting are not perfectly parallel. The velocity of the rope should not be less than about 4,500 feet per minute, nor more than 5,000 feet, while with belts a velocity of as little as 600 feet per minute may be used, but the maximum should not exceed 4,000 feet per minute, above which the centrifugal force prevents the proper adhesion of the belt to the pulley. For great distances between the lines of shafting ropes should be used; though in exceptional cases they may be employed with as little as 12 feet between shaft centres, in general the distance should not be less than 20 feet. Spans of as much as 328 feet have been worked by ropes with only intermediate support. Under no circumstances should the diameter of the smallest pulley be less than 30 times the diameter of the rope, and in general the pulley ratio should not be greater than four to one. Three standard ropes of manila, hemp or cotton may be used. Hemp is much cheaper than cotton, and usually wears longer, but is less pliable. To facilitate estimates, the approximate weight of a rope pulley may be taken as 5½ pounds per groove for each inch of diameter, though single groove pulleys will weigh double this amount.

## TRADE NOTES.

Mr. E. A. LeBel, wholesale lumber dealer of Sarnia, Ont., has sent out to his business friends a large and very attractive calendar.

One of the most attractive calendars which have reached our desk is from Messrs. T. Sullivan & Co., Buffalo, N.Y. This firm are wholesale lumber dealers, and make a specialty of elm and ash.

Mr. Thomas Pink, manufacturer of lumbermen's tools, Pembroke, Ont., has recently made extensive improvements in his machine shop. The old office has been removed, and in its place a commodious business office, shipping room and store room has been erected. A 35 horse power compound engine has been put in, which gives ample power for all purposes.

# WOOD PULP DEPARTMENT

## MARKETS FOR CANADIAN PULP.

WHEN in Montreal recently, ex-Mayor George Robertson, of St. John, N. B., was interviewed regarding the proposed pulp mills in New Brunswick. After referring to the several mills now completed and projected, he was asked the following questions :

"Will there be room for all of these mills, and will the demand be sufficiently large to warrant such an extensive outlay?"

"I will answer your questions," Mr. Robertson replied, "by giving you some information as to the extent of the British market. In the Lancashire district of England, 180,000 tons of mechanical pulp are imported yearly for paper. This immense quantity comes chiefly from Scandinavia and Bohemia, and please remember that this is only one kind of pulp."

"Leaving Great Britain and France, which is also a pulp importer, out of the question, just consider the ever-growing paper consumption of the United States. Besides this, there must be at least thirty different articles in which pulp is used in the manufacture."

"Can we compete with the States in the manufacture of pulp?" was next asked.

"To use a common expression, the United States are "not in it." They simply cannot compete with Canada in pulp manufacture. Wood costing from $2.50 to $3 and even less in Canada is costing to-day $6 per cord in the United States."

Continuing, Mr. Robertson said that the Americans allowed our wood to go in free, but they levy a duty on the pulp, and in reply to another question, he said : "I should judge the Canadian pulp and paper industry to be of sufficient importance to bring influence to be felt at the proper time and place. I look upon the manufacture of pulp and paper in Canada as one of the most important industries that can be fostered in the Dominion, and the day will come when Canada will have almost a monopoly of the business."

"And New Brunswick will possess its good share?"

"Yes ; our province has the largest area of spruce suitable for that purpose that exists in Canada to-day."

## FAVORS AN EXPORT DUTY.

MR. J. H. Lefebvre, C. E., of Montreal, who recently returned from England, tells, in the Montreal Star, of the results of his investigations touching the pulp and paper industry. For the last four years he has devoted his time to the study of the manufacture of pulp and paper, and of the advantages that Canada offers to that industry, and the conclusions he has arrived at are : That we possess indisputable resources and advantages ; that, in order to be remunerative and susceptible of attracting capital, the industry should be carried on on a large scale in mills of large capacity ; that, in order to retain the control of their market, the British people will have to turn their eyes to Canada and invest their capital here.

Early last winter he went to England for the purpose of impressing these views upon some of the wealthy manufacturers, and in this he states he was successful. He considers it necessary, however, that Canada should impose an export duty on pulp wood.

Mr. Lefebvre says : "If we increase our production suddenly to a large extent, we must create a demand, because we must be careful not to flood the market ; and the only way to do is to take the place of the Americans on the British and European markets, even on their own market. The position to-day is this : The United States forests are getting depleted, and we are allowing the Americans to take our logs and pulp wood, while they impose a duty on our manufactured articles. Why should we let them steal our wood the way they do and leave practically nothing in the country in return but the stumps, while our Canadian workmen are working in the United States in mills supplied with Canadian wood to the benefit of the Americans, who sell us paper and export pulp and paper to Great Britain, Europe—even Australia? We have a great field before us, and it is now time to decide whether we shall take the lead in the wood pulp and paper industry. In the Old World, except Scandinavia, they have no surplus of wood, but barely enough for their own consumption, and many countries have to rely on others for their supply. In Sweden and Norway wood is going up in price, and they can hardly increase their production. We must look to Great Britain for the capital to develop our interests, and especially this one. British capitalists are now turning their attention to Canada. They seem to realize that after Australia and South Africa have had their turn, they should naturally look to Canada for investments ; but as yet they are timid. By affording the necessary facilities and encouragement to make it a success, they will start in a good sound enterprise, such as the pulp and paper industry, and the capital will soon follow to develop the other industries of the country. It is time that we should look sharply after our own interests. And sooner or later the question must be settled by the Dominion government, as they will be requested by the American authorities to veto any legislation passed by the provinces to aid this industry. What the country requires is an export duty. I admit that if the duties were taken off on both sides of the line it would open a big market. But this would not have the results we are looking for—it would not stimulate the industry, and would permit the Americans to retain the control of the market."

## QUESTIONS AND ANSWERS.

"READER" asks : Can you tell me whether the balsam or fir timber grown on the shores of the Lower St. Lawrence is used in the manufacture of pulp ?

ANSWER : We understand that balsam fir is used quite extensively and successfully for chemical (either sulphur or soda) process pulp, but it is no competitor with spruce for ground wood or mechanical pulp. No other wood so far as known is so well adapted for mechanical pulp as our native spruce. We are informed that some spruce mills making spruce pulp may add a small percentage of balsam pulp to their product without detection, but it is considered an adulteration. As a matter of fact, any of our native woods will make chemical pulp, but there is no substitute for spruce for mechanical.

## PULP NOTES.

The E. B. Eddy Company have commenced the erection of a new pulp mill at Hull, Que.

Mr. Douglas Ayerst has been appointed superintendent of the pulp mill of the Royal Paper Mills Company at East Angus, Que.

The council of St. John, N.B., has granted to the Cushing Sulphite Fibre Company the necessary water supply, and the erection of the proposed pulp mill will now be proceeded with.

Mr. Hiram S. Maxim, of London, Eng., was in Ottawa last month, investigating the prospects for a pulp mill. An examination of the water power at Chelsea, owned by Gilmour & Hughson, was made.

The mayor of Woodstock, N. B., has received a communication from a large business concern in Ontario who are considering the erection of an immense pulp mill in Eastern Quebec or New Brunswick.

Mr. W. J. Findlay, of Lawrence, Mass., who has been appointed manager of the Sturgeon Falls Pulp Company, is a brother of Mr. J. D. Findlay, superintendent of the Toronto Paper Co.'s mill at Cornwall, Ont.

The Lake Megantic Pulp Company, of Lake Megantic, Quebec, is seeking amendments to its charter, with a view to increasing the capital stock and engaging in a more extensive pulp-making, saw-milling and electric light business.

It is understood that Mr. George Taylor, of Toronto, has abandoned, for the present at least, the idea of erecting a pulp mill at Seven Islands, on the north shore of the St. Lawrence river, in Quebec. At one time the project seemed in a fair way of being carried to completion.

A dinner was given recently at the Royal Hotel, St. John, N. B., by Mr. M. F. Mooney, in compliment to Messrs. Philip Grosset and W. D. Grosset, managing directors of the St. John Sulphite Co., Ltd., who came from Scotland to inspect the work that had been done. The mill will be completed early in March.

The pulp mills at Val Morin, three miles from Ste. Adele, in Quebec, were destroyed by fire last month. The mills passed into the hands of an American company about two months ago, J. H. Nault, the former proprietor, receiving $55,000 for the property, including the limits. The new owners were at the point of adding some buildings and installing new machinery to the value of $15,000. The loss is about $30,000, half of which is covered by insurance. It is stated to be the intention of the company to rebuild at once.

A patent has recently been taken out for a new method of drying pulp. According to this invention, the drying cylinders are enclosed in an air-tight compartment, in which there is a partial vacuum created by means of air pumps. By this means the water evaporates very quickly, and the temperature of the drying cylinders need not, therefore, be very high. Pulp dried by this means is, therefore, not exposed to the danger of being discolored or affected by being too highly heated. Mechanical pulp dried in this way is disintegrated in the heater as easily as air-dried pulp.

The Sissiboo Falls Pulp Company, of Weymouth Bridge, N.S., have in their mill four grinders, three wet machines, two hydraulic presses and a smaller packing press. There are also the necessary repair shops, and an electric light and steam heating plant. The mill works day and night throughout the greater part of the year. Scarcity of water in certain seasons sometimes necessitates a suspension. This difficulty, however, has been largely overcome by the construction of reservoirs at convenient points on the upper part of the river. Some twenty-five tons per day is the average output of the mill, which consumes annually about 3,000 cords of spruce. Employment is furnished to twenty-six men.

The Chatham, N.B., World of recent date says : The steamship Tiber sailed on Monday with 1,200 tons of pulp shipped by the Maritime Sulphite Fibre Co. She will call at Halifax and take on 400 tons of pulp that the company has forwarded to that port by rail. The Tiber's St. John freight, four carloads, was forwarded by rail from Chat-

ham. The pulp taken from here by the steamer is valued at $40,000. The company had the option of sending the Tiber either to Halifax or St. John to load the balance of the cargo, and chose Halifax because the Intercolonial bid lower to Halifax than the Canadian Pacific and Canada Eastern to St. John for the carriage of the 400 tons of pulp. Competition between rival railways is a big thing for shippers of freight.

The Dominion Pulp Co., says the Chatham, N.B., World, is experimenting with hemlock. Two batches of hemlock fibre were cooked the other day, and the pulp looks white and of good quality. Should it prove to be as valuable to the paper makers as pulp made from spruce, it will be of much benefit to the owners of hemlock lands.

The Halifax Mail says: The pulp business is now looked upon as one of the most profitable investments in this province, and St. Margaret's Bay is considered a suitable locality for the operation of a large mill. It has advantages for shipping, and if the scheme goes through the community there will be benefitted. It is from this point, too, that the company proposes to distribute its power to other manufacturing concerns. From the engineer's report it has been ascertained that the water supply at that point is sufficient to develop thousands of horse power, and of the enormous amount available it is estimated that some 2,000 horse power can be brought to Halifax. The rest will be devoted to furnishing power for the pulp mill. As to Rockingham, a central power house will be established, and from that point the electricity be distributed about the country. In order that no time may be lost should the legislature decide to grant a charter, a representative of the company is now in New York making inquiries as to the cost of a plant and the machinery most approved by up-to-date electricians.

A correspondent of the Montreal Gazette, referring to the proposed works to be carried out in Newfoundland by the Newfoundland Bleached Pulp Company, under the management of the Messrs. Reid, of Montreal, says: "Preparations for commencing the pulp manufacture are in an advanced stage. All the plans are matured and machinery ordered. The most skilled experts have been consulted. The site of operations is an ideal one, being an immense area on the shores of Grand Lake, not far from the railway, densely covered with wood of the very best kind for making pulp. Close to it are the coal mines. Water power to any extent is available. In the marble beds of the Humber, at a short distance, are inexhaustible supplies of lime. At Bay of Islands, at no great distance, are immense deposits of iron pyrites, containing 50 per cent. of sulphur, from which sulphuric acid is made—an indispensable article for the manufacture of the best kind of pulp. It would be impossible to find such a combination of advantages for carrying on such an industry, in any other place. One of the greatest pulp factories in the world will spring up here, as if by magic."

About one year ago arrangements were nearly completed for the erection of a large pulp mill at Buckingham, Que., but for a reason then unknown the undertaking was not proceeded with. Now the explanation is made public by an action for damages entered in the Superior Court of Quebec against Frank Ross, for $500,000, the largest claim for which an action for damages was ever entered in that district. The plaintiff is John Livingstone, accountant, Montreal. Mr. Ross was the owner, or one of the owners, of the property that had been under negotiation, and Mr. Livingstone was the medium through whom it was sought to be purchased. In short, Mr. Livingstone acted as if he had an option on the property, and proceeded in the usual way to promote the sale of it by getting together the nucleus of a company to take it over. Mr. Ross is said to have intervened and the transaction was stopped. Mr. Livingstone regards Mr. Ross' withdrawal of the property, or refusal to sell it on the terms proposed, as a breach of agreement, for which he now sues for damages. He alleges that last fall Mr. Ross wrote to him offering the property for $130,000, $30,000 to be in cash and the remainder equivalent to cash. This letter he sets up as a promise of sale. He had an option of three months, he further states, in which to accept the offer or not. On the 15th of January last, the day on which the option is represented to have terminated, he claims to have tendered Mr. Ross through a notary $30,000, which, he says, Mr. Ross refused to accept.

## ONE DOLLAR.

THE above sum represents the yearly subscription price of the CANADA LUMBERMAN, including both weekly and monthly editions, mailed to any address in Canada or the United States. Owing to postal charges, the subscription price to foreign subscribers is two dollars per year. Persons in foreign countries interested in Canadian timber products can invest that sum to no better advantage than by becoming a subscriber. Likewise every mill owner in Canada should read the columns of the CANADA LUMBERMAN. A sample copy will be furnished upon request.

## CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.
G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.
Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.
S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.
Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.
C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.
D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.
Thomas Moffat, 16 Church street, Cape Town, South Africa.
G. H. Mitchell, 15 Water street, Liverpool, England.
H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.
Harrison Watson, Curator, Imperial Institute, London, England.

## PERSONAL.

Mr. A. E. Ryan, millwright with the Bronson & Weston Company, Ottawa, was married last month to Miss Bertha Denmark.

Mr. S. W. Conrad, a popular lumberman of St Croix, N.B., recently took unto himself a wife, in the person of Miss Reid. THE LUMBERMAN extends congratulations.

Mr. Joseph S. Wallis, of Port Carling, Ont., died last month. He carried on a sawmilling and general store business, and had been a resident of that village for 27 years.

Mr. W. H. Harris, representing Messrs. George T. Houston & Co., wholesale hardwood lumber dealers of Chicago, spent the holidays with his family in Toronto. The CANADA LUMBERMAN received a pleasant call from him during his stay in the city, and was pleased to learn that he is succeeding in working up an important business in Canada for the company which he represents.

FOR SALE

24 sets good Lumbering Sleighs. Width, 5 feet 2 inches over all; runners, 4 x 6 x 7 feet; bunk, 8 feet; spring steel shoeing. Will be sold cheap. Apply to

## BANKER'S VIEW OF THE LUMBER TRADE.

MR. Charles Magee, president of the Bank of Ottawa, thus referred to the lumber industry in his address read at the annual meeting in Ottawa last month :

"With regard to the lumber trade, which has in the past and still continues to give employment to a large proportion of our resources, I am glad to know that recently a distinct improvement is noticeable in the demand for the grades usually sold to the American market, with quite a perceptible hardening in prices, while indications are not wanting that Great Britain's requirements will be as large as for several years past, and that values will be fully maintained. We must, however, recognize that in so far as the manufacture of sawn lumber at the city of Ottawa and vicinity is concerned, it is a diminishing industry. There is, however, every reason to believe that the water power at the Chaudiere Falls can and will be profitably employed in other branches of manufactures, doubtless, with increased outlay for skilled labor, which will have a tendency to advance the growth and increase the prosperity of the city. The utilization of pulp made from spruce and other woods hitherto considered of but little value, in the manufacture of paper and other products, has added immensely to the value of our forests, and many limits in the Ottawa and other lumber districts, denuded of the merchantable timber, but having a large quantity of young spruce trees on them, may be considered valuable properties, and possibly a more valuable asset than a gold claim in the Klondike."

## FOREIGN NOTES OF INTEREST.

The Sanders & Egbert Company, hardwood lumbermen, of Goshen, Ind., recently paid John M. Newton, of Decatur, Mich., the sum of $10,000 for fifty-one walnut trees growing on his farm.

A wealthy lumber dealer of Dresden, Germany, has come across the ocean and gone across the continent to investigate the qualities of fir lumber. He has purchased a number of cargoes and is negotiating for others. He says that they want wide lumber, and that they can get what they want better on the west coast than any place else he knows of.

For several centuries timber cutting has proceeded in Bohemia, Europe, and yet the primeval forests retain almost their original area. This is due to the forethought of the government, and the regulation which provides that as trees are cut down others shall be planted, or young trees preserved, so as to maintain a complete stand in the forest growth. The timber is mostly pine. Wherever a clearing is made, small trees are set so as to cover the denuded space. The trees are raised in small enclosures in the mountains, from whence they are transplanted.

Mr. William Carther, Ariel, Ont., in remitting his subscription, writes that he would not care to be in the lumber business without THE CANADA LUMBERMAN.

# DICK'S PATENT BALATA AND CANVAS BELTING

## St. Catharnies, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

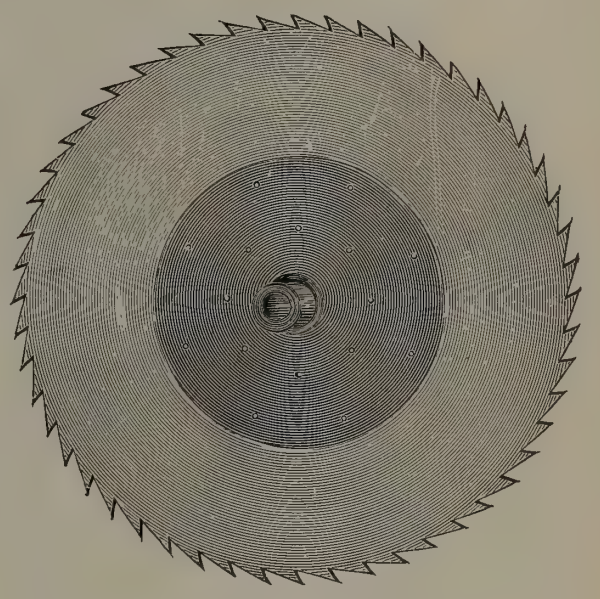
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

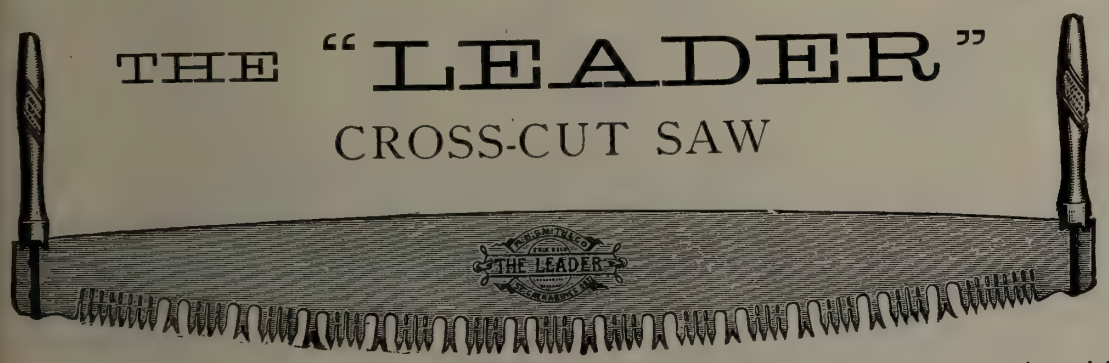
GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## THE "LEADER" SAW SWAGE

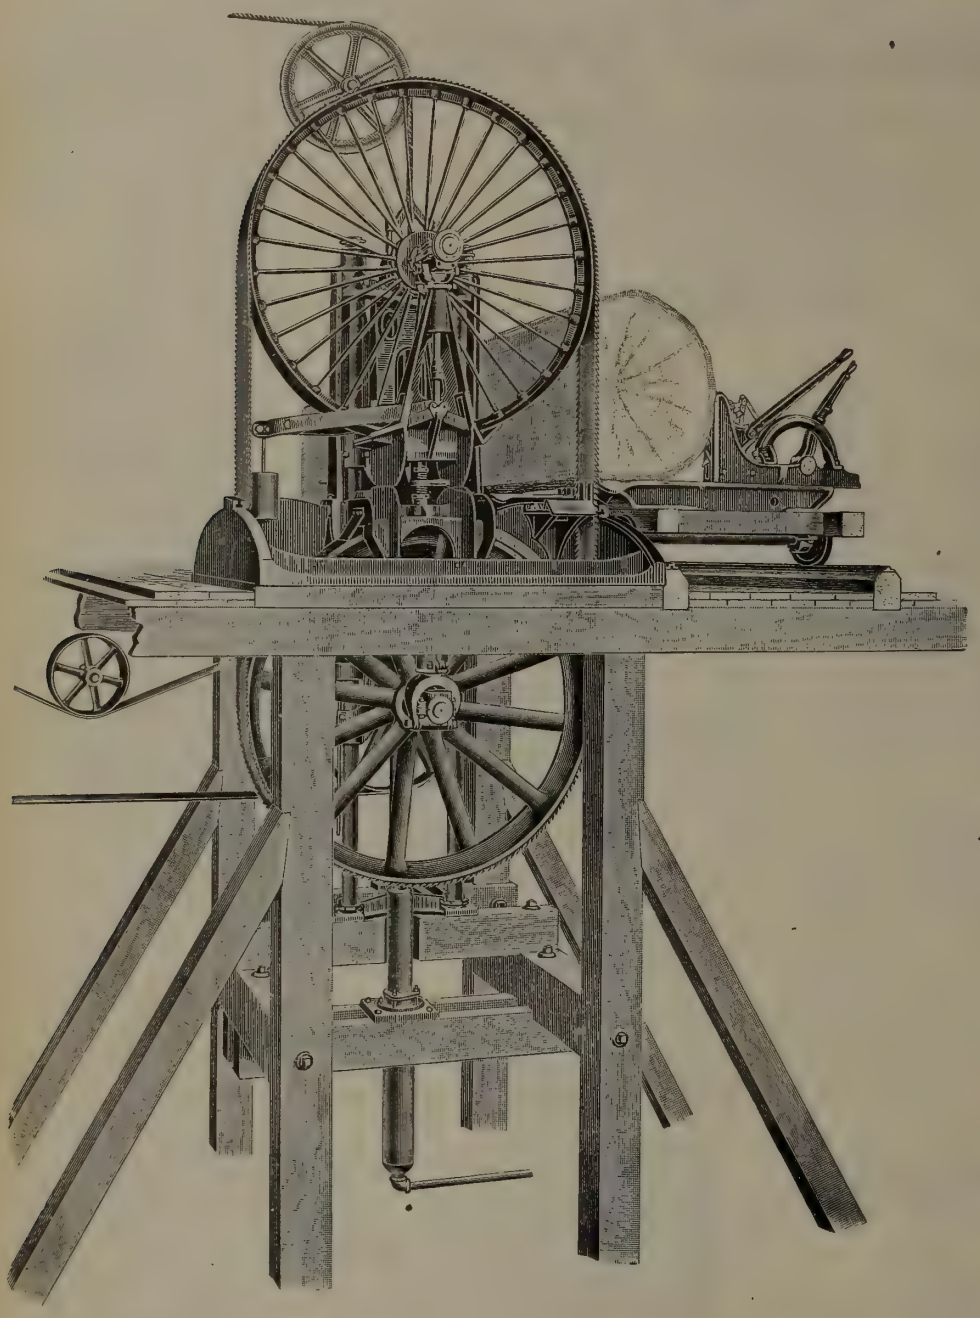
**Made in 3 Sizes—$2.00, $2.50, $3.00 Net.**

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

# R. H. SMITH CO., Limited, St. Catharines, Ont.

# New Allis Telescopic Band Mill

## For Either Single or Double Toothed Saws



## WHAT DOES IT MEAN?

It means a Band Mill that is built on correct mechanical principles.

This entire mill is moved vertically, so that the centre of the upper band wheel can be brought down close to the top of the smallest log, thereby having a saw shorter than a gang saw above the work on any sized log.

The vertical movement enables us to keep the surplus length of saw blade below instead of above the log. The upper wheel acting as the guide, insures the greatest possible rigidity of the saw, enabling the same to stand more feed than on the ordinary band mill.

This cut shows the mill elevated to cut a large log.

Manufactured in Canada only by.....

**THE WATEROUS ENGINE WORKS CO.**

**BRANTFORD, CANADA**

*5 ordered in November by American Lumbermen, and 1 ordered by a Progressive Canadian.*

The machine is now, and has been for over seventy-five days, running twenty-two hours per day, fitted with double-toothed band saws, in the H. C. Akeley Lumber Co.'s mill at Minneapolis, Minn.

A visit to the above mill will convince anyone that this mill is cutting lumber at least 50 per cent. faster than it can be manufactured on any other make of band mill.

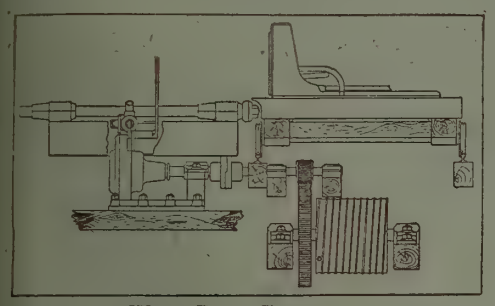
This mill is moved up and down at any desired speed while sawing by hydraulic power. The machine is very simple in construction, consisting of a regular band mill (less the upper guide and driving mechanism for same) mounted on slides with hydraulic cylinder for raising.

This cut shows mill in lowest position to cut cants 12" thick.

**We will be pleased to mail you our Circular, giving full information.**

**Waterous, Brantford, Canada**

# The DAKE STEAM FEED



WITH ROPE FEED.

Embodies the following Advantages:

**Simplicity of Construction,**
**Positive and Easy Management,**
**Economical Use of Steam,**
**Small Space Occupied,**
**Cheapness,**
**Easy Adaptation to either New Mills or those now in use.**

The movement of the engine in either direction is under the absolute control of the sawyer, thus accommodating the speed of the feed to the size of the logs.

Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

Write for Catalogue and full particulars.

# 1898

## Review of the Lumber Trade of the Year.

### GENERAL SURVEY.

By a study of the data bearing upon the lumber trade of the year 1898, the conclusion is reached that the aggregate volume of business was somewhat below that of the previous year. British Columbia shows a falling off in exports to foreign countries of about 10,000,000 feet, and the Maritime provinces of nearly 150,000,000 feet, while the exports from Ontario and Quebec were no greater than in 1897.

Yet, considering the conditions, the record of the past year is not one which shows a backward tendency. Manitoba, which does not rank as an exporting country, consumed more lumber than in any previous year in the history of the province. The production of spruce in the Maritime provinces in the year 1897 was too great for the requirements of the then exploited markets, and the business of the following year suffered as a consequence. But this was not an unmixed evil, as the low price of spruce permitted it to secure a foothold in markets where it was previously unknown.

The war between Spain and the United States seriously interfered with the trade of the year, not only in lumber, but in other lines of commerce. Contemplated improvements on the eastern seaboard of the United States were entirely stopped, and the demand for vessels caused freight rates to advance sharply, making it difficult to secure lumber tonnage at a rate which would permit of chartering.

The experience of the past years leads to the conclusion that in foreign markets the demand for lumber is giving place to that for the more finished product, just as timber in the log has been replaced in late years by boards and deals. To this the attention of Canadian lumbermen is directed.

### ONTARIO.

Lumbermen in Ontario will look back upon the year 1898 as one in which business showed a substantial improvement over that of the previous few years. In nearly every department of the lumber industry the returns were greater in proportion to the volume of trade. Notwithstanding that lumber exported to the United States was subject to a duty of two dollars per thousand feet, prices advanced considerably during the latter part of the year, when there was a strong demand, in the face of light stocks.

The position of the pine trade will first be considered. In the winter of 1897-98 lumbermen owning mills in Ontario operated in the woods only moderately, as it was desirable that stocks of lumber then in the yards should be reduced. There were two principal markets in which lumbermen hoped to dispose of their stock, viz., Great Britain and Ontario. The British market had been heavily stocked in 1897, but it was found possible, nevertheless, to dispose of about the usual quantity of Ontario lumber for consumption in the Mother country, and at the usual prices. The feature of that trade was the urgent demand for Norway, or red pine, which seems to be gaining ground, and replacing other woods. Sales of the Ottawa valley production were made last winter at favorable prices.

The consumption of lumber in the local market more than counterbalanced the loss in the volume of the United States trade. Building operations opened unusually brisk in the spring, and continued active throughout the season, resulting in a greatly increased demand for pine lumber, and especially for the lower grades. This improvement in building was not confined to the country districts and small towns and villages, but extended to the cities. In Toronto the buildings erected in 1898 were valued at $1,701,630, as compared with $951,130 in the previous year. United States buyers also entered the Canadian market in search of box lumber, which, partly on account of the Spanish-American war, had become scarce in the United States. This was a further drain upon the common grades, and as a result prices advanced fully two dollars per thousand. At the close of the year stocks were greatly reduced as compared with the holdings of previous years, a condition which cannot but strengthen the position of manufacturers in 1899.

The hardwood industry was in a flourishing condition throughout the year. The trade of the spring and summer was characterized by active buying and a heavy movement of stock. Towards the fall it became evident that the available supply would not be equal to the demand, and consequently there was a marked advance in prices. It soon became a question of where to obtain the stock rather than the price to be paid for same. Manufacturers who held any quantity of dry hardwoods were in a position to dictate terms to buyers. There was quite a heavy export of hardwood lumber to the United States, notwithstanding the duty, which was paid in nearly every instance by the consumer. Hardwood prices made a gain during the year of from $2 to $3 per thousand, but it cannot be said that the full benefit of this was realized by the manufacturer, as the cost of logs for 1898 sawing was considerably greater than in the previous year. This winter prices even higher than those of last year are being paid ; a step the wisdom of which is open to doubt.

The shingle industry was prosperous in 1898. Pine and cedar shingles were in good demand on account of the increased building, and higher prices were obtainable. The production of shingles was also much heavier than 1897, and a number of new mills were put in operation.

The reports from the lumber manufacturers in Ontario are almost unanimous on one point, viz., that the business was more remunerative last year than in any season for many years. The volume of trade was perhaps no greater, but business yielded a larger margin of profit. The production of lumber was curtailed both in the Georgian Bay district and in the Ottawa valley. For the purposes of comparison, we give below the average cut for two years of a few mills in Western Ontario :

CUT OF SOME WESTERN ONTARIO MILLS.

| | 1897—Feet. | 1898—Feet. |
|---|---|---|

| Milne & Hefferman, Trout Creek | 2,500,000 | 2,000,000 |
| Robert Watt, Wiarton | 1,500,000 | 2,500,000 |
| Toner & Gregory, Collingwood | 5,000,000 | 2,500,000 |

The lumber production of the Ottawa valley in 1898 was about 115,000,000 feet less than in the previous season, being, as nearly as can be estimated from the data at our disposal, 633,000,000 feet. It will be observed that practically all the larger firms reduced their output. The production of the different mills for two years was as follows :

OTTAWA VALLEY PRODUCTION.

| | 1897—Feet. | 1898—Feet. |
|---|---|---|
| J. R. Booth, Ottawa | 130,000,000 | 118,000,000 |
| Gilmour & Co., Canoe Lake | 55,000,000 | 33,000,000 |
| Hull Lumber Co | 60,000,000 | 55,000,000 |
| McLachlin Bros., Arnprior | 70,000,000 | 65,000,000 |

| Total | 748,000,000 | 633,000,000 |

The above figures are, in the main, reliable, although in one or two instances where no reply was received to our request for data it has been assumed that the cut was the same as in 1897. In making a comparison with 1897, it must be remembered that the cut of that year was an unusually heavy one, and showing an increase over 1896 of 114,000,000 feet.

The export of forest products from the consular

district of Ottawa to the United States, as furnished by the United States Consulate General, shows a decrease as compared with 1897 of over $1,000,000. The detailed figures for the four quarters of the last three years are as follows :

## QUEBEC.

The year was not a particularly prosperous one for the lumbermen of the province of Quebec. The local trade was below the average, and shipments made to the United States were sold at such a low figure as to leave but a small margin of profit. The price of hemlock and spruce at New England points was lower than before the United States duty was imposed, and as a result only very moderate sales were made, leaving manufacturers with heavy stocks. Work in the woods is therefore being restricted, although a larger quantity of spruce will be taken out for pulp wood. Owing to the depression in the United States trade, a tendency is slow to work stocks of all kinds into the British market. The export trade of the year was not altogether satisfactory. Spruce and pine deals were marketed in foreign countries to about the same extent as in 1897, but prices of the lower grades of spruce weakened slightly in sympathy with the depression in the Maritime provinces trade. The South American market was more active than for several years. From the port of Montreal there were shipped during the season to the United Kingdom and continental ports 323,435,266 feet board measure, an increase over the previous year of 2,632,533 feet. To the River Platte and South America there were shipped 11,993,924 ft. board measure, an increase over 1897 of 11,576,419 ft. The following table shows the quantity shipped by the various exporters, and a comparison with the previous year :

| | 1897—Feet | 1898—Feet. |
|---|---|---|
| Dobell, Beckett & Co. | 98,000,000 | 76,924,116 |
| W. & J. Sharples | 56,829,640 | 62,488,502 |
| R. Cox & Co. | 38,125,185 | 44,819,842 |
| J. Burstall & Co. | 36,319,608 | 39,627,140 |
| McArthur Bros. | 32,786,506 | 35,595,538 |
| Watson & Todd | 30,359,130 | 30,802,571 |
| E. H. Lemay | 8,000,000 | 5,122,000 |
| Sundry shippers | 20,382,664 | 28,045,557 |
| Total | 320,802,433 | 323,625,266 |

The statement below shows the quantity and value of lumber and timber exported from the ports named :

| PORTS. | ARTICLES. | QUANTITY. | VALUE. |
|---|---|---|---|
| Montreal | Pine Deals | 78,365 Std. H... | $3,622,910 |
| | Spruce Deals | 12,218 " ... | 352,349 |
| | Deal Ends | 7,498 " ... | 445,835 |
| | Planks, Boards, &c. | 35,8[illegible]5 M. ft. | 747,048 |

| | Other Headings | ..... | 7,028 |
| | | Total value | $120,368 |

Mr. James Patton, supervisor of cullers, furnishes the following comparative statement for three years of the chief kinds of timber measured and culled at that port :

STATEMENT OF TIMBER MEASURED AND CULLED AT THE PORT OF QUEBEC DURING THE SEASON OF 1898.

| Description of Timber. | 1896. Cubic Ft. | 1897. Cubic Ft. | 1898. Cubic Ft. |
|---|---|---|---|
| Waney White Pine | 2,870,879 | 4,311,340 | 1,903,148 |
| Square White Pine | 316,093 | 832,589 | 1,062,157 |
| " Red Pine | 50,609 | 211,217 | 239,512 |
| " Oak | 1,139,155 | 1,448,960 | 1,072,588 |
| " Elm | 416,625 | 666,577 | 474,194 |
| " Ash | 83,749 | 132,435 | 35,164 |
| " Birch | 252,424 | 262,297 | ..... |

There were also measured this year, 955 cubic feet of butternut, 1,049 feet of maple, 513 feet of spruce, 113 feet of walnut, 2,600 feet of hickory, 2,915 feet of whitewood, and 3,682 feet of cherry.

The timber trade of Quebec is reviewed by J. Bell Forsyth's annual circular as follows :

The past season shows a diminution in the business of the port in wood goods, with the exception of spruce deals, pine boards and sidings shipped from Montreal, and Ottawa pine deals, now almost altogether sent from same port, continue, year by year in an increased degree, to displace waney and square pine in the markets of the United Kingdom. Prices have remained without alteration in this market in nearly all lines, though forced down by oversupply and competition in the home markets.

Ship-building in the United Kingdom has never been in a more satisfactory condition, but the consumption of Canadian wood in connection with this business is a diminishing quantity. General prospects and present volume of business in other lines are distinctly good and promising.

WHITE PINE.—With a diminished export the stock of square pine has increased considerably, and that of waney pine slightly, as compared with last year, but square pine suitable for deck plank purposes and waney pine of really first class quality and good average size, are comparatively light in stock. The Ottawa, Western and Michigan production will all be exceedingly light this winter.

| | Supply | Export. | Stock. |
|---|---|---|---|
| 1898 Square | 1,062,157 | 3,015,320 | 1,353,799 Square. |
| 1898 Waney | 1,903,148 | | 2,451,838 Waney. |
| 1897 Square | 832,589 | 3,773,040 | 482,849 Square. |
| 1897 Waney | 4,311,340 | | 2,288,249 Waney. |

RED PINE.—The stock is heavier than last year, and ample for reduced demand. The price must advance considerably to induce increased manufacture.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 239,512 | 145,600 | 291,639 |
| 1897 | 211,217 | 168,760 | 183,552 |

OAK.—Shipments have been light as compared with recent years, and stock is heavier than last or preceding winter in consequence. Manufacture will not be heavy.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 1,072,588 | 949,095 | 942,905 |
| 1897 | 1,448,960 | 1,412,200 | 694,111 |

ELM.—Has been in good demand at full prices all season, and stock is under last year. Suitable standing timber is now very difficult to obtain, especially of large size, and a scarcity seems probable at no distant date.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 474,194 | 459,920 | 138,059 |
| 1897 | 662,577 | 587,080 | 163,835 |

ASH.—The stock is exceedingly light, and as wood of large average and good color is now scarce and difficult to obtain, manufacture will be small.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 35,164 | 74,040 | 9,599 |
| 1897 | 132,435 | 76,200 | 93,766 |

BIRCH.—Reduced production last winter has resulted in little being left on hand to winter. New wood of good lengths seems likely to be required, but production is easily overdone.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 211,451 | 211,000 | 160 |
| 1897 | 262,297 | 214,080 | 24,712 |

PINE DEALS.—Until shorter rail communication with Hawkesbury and Ottawa is established by the completion of the Great Northern extension of the Parry Sound Road, pine deals will continue to be shipped almost altogether from Montreal, though the business is largely controlled and carried on by Quebec houses. There seems no probability of producers accepting any reductions on last year's prices for new cuttings, and if United States duty is taken off lumber, an advance may be established.

| | Supply. | Export. | Stock |
|---|---|---|---|
| 1898 | 392,381 | 192,381 | 152,844 |
| 1897 | 601,864 | 49,716 | 168,885 |

SPRUCE DEALS.—Continue in an unsatisfactory position, owing to heavy production and competition of Baltic whitewood at reduced prices. A removal or reduction of the United States duty on sawn spruce lumber would greatly benefit mill owners. The increased business in pulp wood is sending up the value of spruce limits.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1898 | 3,881,670 | 3,592,782 | 1,132,005 |
| 1897 | 3,049,322 | 3,738,107 | 1,071,313 |

FREIGHTS.—Opened at same figures as last year, seventeen shillings for Clyde, and nineteen shillings for Liverpool for timber cargoes by sail, Quebec loading, and forty shillings for deals by steam liners from Montreal to leading U. K. ports, with half a crown more for entire steamers. As season advanced chartering became difficult even at advanced rates, but the summer freights returned to spring level. In the fall the usual advance, consequent on increased insurance paid by steamers after September loading, took place, but was not so marked as last year.

## THE MARITIME PROVINCES.

Low prices, a weak demand, and high freight rates, were the characteristic features of the timber trade of New Brunswick and Nova Scotia in 1898. The British market was overstocked with spruce deals from these provinces in the previous year, and consequently when navigation opened it was difficult to obtain a quotation from shippers which would more than cover the cost of production. Profiting by experience, the lumbermen operated in the woods in the winter of 1897-98 very moderately, and much less than the usual quantity of logs was taken out for manufacture. In New Brunswick the production of lumber last year was curtailed by nearly one-half in comparison with 1897, and in Nova Scotia the output was restricted to some extent. To this is due the improvement in the market which took place in the early fall. Stocks having become reduced both at home and abroad, prices showed a tendency to stiffen, and some sales were made at a considerable gain over the quotations of the spring. But, partly owing to the Spanish-American war, freight rates fluctuated greatly, making it difficult to calculate, and rendering the results of contracting on c. i. f. terms very uncertain. It can be truly said that British shipments, on the whole, were unsatisfactory.

One advantage of the prevailing low prices was in opening up a new market for spruce. Hitherto Canadian spruce was little known on the east

coast of England, but the high price of Baltic deals caused buyers to turn their attention to spruce, with the result that a considerable quantity was disposed of in east coast ports. A foothold having now been secured for our eastern spruce, it will no doubt continue to be marketed there to a greater or less extent.

The markets of South America, France and Australia, improved during the year. There were shipped from the port of Miramichi to France 12,000,000 feet, against 4,000,000 feet in 1897. To Australia, from the port of St. John, the shipments totalled over 5,000,000 feet; this being a marked gain over any previous record. Nova Scotia manufacturers marketed more lumber than usual in South America and the West Indies, but even in this trade profits were small. The Cuban demand was interfered with by the war. The demand from the United States for lumber was very meagre. There was a good shingle trade during the year, although prices were low. The hardwoods of the Maritime provinces were sold only to a moderate extent. More box shooks are each year being disposed of in the British market, and indications point to a speedy increase in this branch of the lumber industry.

The outlook for the season of 1899 is more hopeful. Operations in the woods this winter are light, and are being interfered with by mild weather. Prices are improving, and a degree of confidence pervades the trade generally.

According to J. B. Snowball's Miramichi wood trade circular, the combined trans-Atlantic shipments of deals, etc., from New Brunswick and Nova Scotia during the year 1898 amount to almost 561,000,000 superficial feet, this being almost 119,000,000 less than in 1897. Several parts of each province show an increase, but the decreases in the others are sufficient to bring both provinces very much behind the previous year.

A feature of this year's business was the large decrease in the exports from almost every New Brunswick and Nova Scotian port, showing a reduced shipment from the former province of 82 million sup. feet and from the latter of 37 million superficial feet. The shipment of lower port woods is yet, however, entirely too large for present market requirements, and a further curtailment of from 10 to 20 per cent. would give much better results for both shippers and producers. The prospects of improved markets in the United States, the West Indies and South America are most promising, and if these consume even a limited additional quantity of the smaller sizes (such as they usually take) it will, to a large extent, curtail consignments to Europe and have a marked beneficial effect on prices. The stock of merchantable spruce deals and logs wintering at this port is above the average, although 23 million superficial feet less than last year. This, with the decreased production of this winter and prospects of improved business on this continent will, no doubt, strengthen sellers' ideas of values.

## MANITOBA AND NORTHWEST TERRITORY.

As predicted in our review one year ago, the production of logs during the winter of 1897-98, for the purpose of supplying the lumber requirement of Manitoba and the Northwest Territory, was greatly increased in comparison with that of the previous season. This was in anticipation of a greater consumption of lumber. Nearly all the mills cutting for that market increased their output during 1898, but at the close of the year the demand had absorbed the bulk of the stock manufactured. Much activity characterized the trade of the spring and summer months, and a slight advance in price was made. Continued rains interfered with the fall trade, which, although of a considerable volume, was not as heavy as was anticipated. It is reported that the total sales of lumber in Manitoba and the Northwest exceeded those of the previous year by about 30,000,000 feet. The quantity of spruce cut by Manitoba mills is estimated at 15,000,000 feet in excess of 1897. The growth of the trade in imported lumber from the United States has been very great. In 1892, before the duty was taken off, the importation of rough lumber was only a little over a million feet, while that of dressed lumber was very much smaller. In 1897 the importation from the United States amounted to 16,000,000 feet, and in 1898, 35,000,000 feet. The lumbermen anticipate a good season in 1899, and are preparing for same by operating heavily in the woods. They are encouraged by the knowledge that retail stocks are unusually light, and that the spring promises to witness a resumption of building operations on no small scale.

## BRITISH COLUMBIA.

The lumber trade of British Columbia made some progress during the year 1898, and this notwithstanding adverse circumstances. The quantity of lumber disposed of in the Canadian market was greater than in the previous year, while the exports to foreign countries were somewhat less. Owing to the failure of the salmon pack, the local box trade fell off perhaps 50 per cent., but this was counterbalanced by the increased consumption of lumber for building purposes. Throughout the province the volume of building was unusually large, while the destruction by fire in the early fall, of a large portion of the buildings of New Westminister proved a boon to the mills in that vicinity. The Manitoba and Northwest demand was much larger than in 1897, with prices fully 10 per cent. higher, but shipments of timber and decking to Ontario and Quebec were lighter. More than the usual quantity of cedar was disposed of in Manitoba for house finish, which seems to indicate that this wood is growing in favor.

There were two obstacles which prevented

lumber manufacturers from realizing more than a limited profit on their product. One of those was the increased price of logs, consequent upon the timber adjacent to the mills having become exhausted. The other was the extreme competition from United States manufacturers, who secured the bulk of the Kootenay trade, and who, having free access to both the United States and Canadian markets, used the border towns in British Columbia as a dumping ground for their low grade lumber.

The outlook for 1899 is better than it was one year ago. To meet the conditions caused by the scarcity of accessible timber, combined efforts have been made to advance the price of lumber, and with some success. Logging railways are also being constructed by some manufacturers, which will facilitate the getting of a normal supply of logs.

The shipments from British Columbia to foreign countries last year were 49,000,000 feet, valued at $406,000, as compared with 68,000,000 feet, valued at $600,000, in 1897.

The table below shows the value of shipments to the different countries for the past two years :

SHIPMENTS BY COUNTRIES.

| | 1897. | 1898. |
|---|---|---|
| Australia..... | $188,955 | $176,303 |
| United Kingdom.... | 154,684 | 43,288 |
| China..... | 87,934 | 75,303 |
| South Africa..... | 71,246 | 50,111 |
| South America..... | 49,227 | 43,406 |
| Japan..... | 30,084 | |
| United States..... | 25,602 | 17,500 |
| Total ..... | $607,732 | $406,001 |

The noticeable feature in the above returns is the falling off in the shipments to the United Kingdom. It is understood that manufacturers received numerous enquiries for clear spruce deals for shipment to that country, but the cost of transportation prohibited a profitable business. It will also be noted that last year no shipments were made to Japan. The decrease in the foreign trade is no doubt due, in a large degree, to the high freight rates prevailing, but it is hoped that during 1899 the lost ground will be recovered, and also business will be transacted on a larger margin of profit.

## THE BRITISH COLUMBIA SHINGLE INDUSTRY.

A member of the trade furnishes the following able review of the shingle industry of British Columbia during 1898 :

SIR,—In some respects the shingle trade of British Columbia was disappointing last year. The business opened about the usual time last spring, and the demand continued very good until about the end of June, when it dropped off suddenly—particularly in Ontario. By the end of July some of the large mills closed down, and remained idle for three months ; and almost all the other mills, whose output is of any considerable importance, curtailed their daily cut about fifty per cent., and at the same time did not run steadily the balance of the year. It is also to be noted that all the manufacturers engaged exclusively in the manufacture and shipment of shingles, complain that the volume of trade to Manitoba was very small during 1898. This is accounted for, to some extent, by the fact that a number of the lumber dealers throughout Manitoba had a considerable stock of shingles on hand at the end of 1897 ; also that large quantities of Puget Sound shingle were imported into Manitoba last year. All points in Manitoba reached only by the Northern Pacific Railway use Puget Sound shingles exclusively, while Winnipeg, Brandon and Portage la Prairie, the largest places in Manitoba, and being also reached by the N. P. Railway, take a great many Washington shingles.

I would estimate the total rail shipments of B. C. shingles for 1898 at 125,000,000. Perhaps half of this amount went to Ontario, and the balance to Manitoba, the North West Territories and interior points in this province. I think that from 160 to 175 million a year may be set down as the total Canadian market for B. C. shingles.

The yearly capacity of the existing shingle mills of this province, running ten hours per day, is 350,000,000, and by operating night and day this may be doubled. It will be seen from these figures how much the present supply is in excess of the demand.

The price of B. C. shingles in Ontario has been exceedingly low during the last three or four years. In fact, some of the mills here have discontinued shipping to Ontario altogether, claiming that they could not possibly produce shingles and deliver them there at the prices that have been ruling during the past few years. The price obtained in Manitoba and the North-West was slightly better last year than it has been for some time, but it is still too low, by at least 25 cents per thousand, to make the business safe and profitable.

A feature of the B. C. shingle business that is becoming marked, is the growing scarcity of cedar timber near the mills suitable for making shingles ; so much so is this the case that one of the largest manufacturers in the province has this year moved his mill to a point on the coast north of this city, in order to be assured of a steady supply of timber. This means extra handling, and towing shingles on barges from the mill to the railway, and a resultant greater cost of production. The time has now practically passed on this coast for shingle manufacturers to get timber within a radius of a half to three miles of their mills, permitting it to be hauled in direct with teams. This handy timber accounts for the astonishingly low prices at which red cedar shingles have been sold. In fact, the value of the standing timber for shingle bolts has hardly been taken into consideration, the cost of the bolts simply being the labor of making them in the woods, and hauling them a short distance to the mills. It can therefore be readily seen that this question of timber supply will make it absolutely impossible for manufacturers to very much longer sell shingles at the present prices. It will also have a tendency to prevent only those with ample capital from embarking in the business.

The Canadian importations of U.S. lumber and shingles previously noted, naturally calls to mind the present jug-handled lumber tariff now in existence between this country and the United States. So far as the shingle business in British Columbia is concerned, it is not a matter of being unable to compete with American manufacturers, but simply a question of the division of a home market with Puget Sound manufacturers, nothwithstanding that it is more than fifty per cent. too small for the existing mills in this province, if they were operated steadily the whole year.

Manitoba and the North-West is our natural market, and we are certainly fairly entitled to the whole of that trade until such time, at least, as the Americans will give us free access to their market.

We entertain the hope, however, that at the next session of Parliament the Dominion Government will come to our relief, by placing an import duty on lumber and shingles equal to the American duty. So far as the U.S. is concerned, we certainly hold the trump card in the matter of forest products.

I confidently believe that if our Government would take a bold and firm stand, and place a prohibitive export duty on logs and wood pulp, and an import duty on rough and dressed lumber, shingles and sash and door factory work, equal to the U.S. duty on similar Canadian products, that it would only be a question of a short time when the Americans would come forward and ask for reciprocity with us on lumber and its products on a fair and equitable basis.

H. H. S.

Vancouver, B.C., January 12th, 1899.

## PUBLICATIONS.

The Covel Manufacturing Company, of Chicago, have favored us with a copy of their catalogue of machinery and tools for the care of saws, which contains illustrations, descriptions and prices of the numerous machines manufactured by this firm. The Covel Manufacturing Company are represented in Canada by the William Hamilton Manufacturing Company, of Peterborough, Ont., who have made a large sale of their filing room machinery and other tools to Canadian sawmill owners.

Our two esteemed Chicago contemporaries, The Timberman and The Northwestern Lumberman have joined forces, and on the first of the year appeared as one journal, bearing the name of the American Lumberman. Mr. J. E. Defebaugh, editor of the Timberman, takes the position of editor of the new journal, while the business end has been placed in the hands of Mr. W. B. Judson, the late editor of The Northwestern Lumberman. The result of this change will, no doubt, be beneficial alike to the parties interested and the lumber trade in general, and to our contemporary we extend our best wishes.

## TRADE NOTES.

For an 1899 calendar we are indebted to Walter Wilson & Son, of St. John, N.B. This firm, which has been established over 50 years, are manufacturers of band, circular, drag, gang, shingle, and cross-cut saws.

The Jenckes Machine Co., of Sherbrooke, Que., recently shipped the Boulder Gold Mining Co., Rat Portage, Ont., two large Locomotive type boilers, 8 x 10 Hoisting engine, and complete portable saw mill plant, with engine and boiler.

The Saginaw Manufacturing Company write us that they have sold the Gilbert Band Re-saw business, consisting of good mill, machinery, patterns, and parts to Wm. B. Mershon & Co., of Saginaw, who will be in a position to furnish necessary repairs to the Gilbert Band Re-saw.

The Jenckes Machine Company, of Sherbrooke, are adding a large number of tools to their plant, some of which may be mentioned—a 14 feet Vertical and Turning Lathe, a 34 feet Shafting Lathe, a new ten ton Cupola, which is being put in place in the foundry, and another Air Compressor in the tailor shop.

Mr. Madison Williams, of Port Perry, Ont., reports that trade is brisk with an outlook for great enlargement. Recent orders include the following : two 84 inch Leffel Turbines for J. A. Booth, Ottawa ; one 26½ inch Leffel, with shafting, gearing, &c., for J. C. McLeod, Middle River, N.S. ; steel flume 5 feet diameter for Wm. Brown Cadmus, Ont.

The Jenckes Machine Company, of Sherbrooke, Que., builders of the Dake Engine, are now prepared to furnish those engines with dynamos direct connected, for small lighting installations, of from 15 to 150 lights. The remarkable perfection to which this engine has been developed, and the simplicity and economy attending its operation, marks the future for this arrangement.

Messrs. Wm. B. Mershon & Co., Saginaw, Mich., announce to the trade that they have purchased from the Saginaw M'f'g. Co., the Gilbert Band Re-saw business. They state that the greatly increased demand for band re-saws was taxing their present manufacturing capacity to its utmost, and it became necessary to increase the facilities by purchasing the Gilbert equipment and acquiring their stock of manufactured machines, when it is hoped to take care of their customers' requirements and make prompt delivery.

## THE FILER AND THE SAWYER.

"BY MECHANIC."

EVERY competent saw filer should have some knowledge of running saws. Sometimes it occurs that well-fitted saws are found to be running snaky, making bad lumber, although the mill is in perfect condition. The trouble is that the guides are closed too tightly against the saw, causing the rim to heat and run snaky. It is an old saying that a good sawyer can do fairly good work with a poorly fitted-up saw, and a poor sawyer can spoil a good saw and butcher up the lumber. Therefore it is a great advantage to the filer to have a practical knowledge of running saws, as he can detect at once whether the fault is in the saw or in the sawyer. As a rule, if the saw makes a crooked cut, it is said to be the fault of the filer. Some times it is the fault of the filer, but in nine cases out of ten the filer is not at fault.

There is a class of travelling uncertainties that, either by being clever with the tongue, or by misrepresentation, are fortunate sometimes to get a position as filer or sawyer, as the case may be. I have seen one of these take hold of a saw lever and rush the carriage backward and forward, crowding the saw beyond its capacity, spoiling the lumber and straining the saw. Good sawyers should be quick and energetic ; and the man who can maintain and repair his own saws has marked qualifications over the one of lesser experience. Give the good sawyer well fitted-up saws, a good strong carriage, the track straight and level, and lots of power to drive the saw, and the quantity and quality of the output then depends very largely on the judgment and hustling qualities of the sawyer. The ideal sawyer is active, strong, of temperate habits, cool-headed, fearful enough to comprehend danger, and possessing quick decision to avoid it. He wastes no time with unnecessary carriage travel ; he avoids passing the back of the saw with the end of log ; his good judgment and practiced hand imparts a strong, steady feed to the very end of the cut ; and he reverses as the teeth leave the cut. The careful sawyer will not force his saw beyond its capacity in rough, tough and knotty logs ; he knows exactly what the saw can stand, and he travels his carriage accordingly. The good sawyer knows just how to place the log on the carriage, and cut it into the sizes, grades and thicknesses most profitable for his employer.

(To be Continued.)

Messrs. Arthur T. Hillyard and Joseph T. Knight are at present in England, for the purpose of laying before capitalists a scheme for the construction of another large pulp mill at St. John, N.B. It is said that engineers are now making a survey of the proposed site.

Mr. W. E. Bigwood, manager of the Holland and Emery Lumber Company, states that his company shipped 23,000,000 feet of lumber from Ryng Inlet, Ont., during the year 1898, principally to South America and European ports. He states that they have established a large foreign trade, and are almost independent of the United States market.

Mr. Charles Burrill, of Weymouth, Digby county, N.S., has gone to England for the purpose of concluding arrangements for the purchase of large tracts of timber land along the Sissiboo river, back of Weymouth, and the erection there of one or more pulp mills. The rights of purchase have already been secured, and it remains only to finance the enterprise and begin operations.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## DISCRIMINATION AGAINST THE HARDWOOD TRADE.

HEPWORTH, ONT., Jan. 9th, 1899.

To the Editor of the CANADA LUMBERMAN:

DEAR EDITOR,—I was pleased to notice in your January number that a brother lumberman had taken up the question of freight discrimination against hardwoods, and also to read in a previous issue your editorial on the same subject. There are three conditions, most unjust ones, that so long as they exist will deter lumbermen from operating in hardwood forests, when anything else is available. The first is the most unaccountable, viz., the discrimination in freight charges. The second is the extremely hard inspection on export stock, and the third is the faulty nature of hardwood, which results in at least 25 per cent. going to the wood-pile. You are not allowed to ship it as low grade lumber with pine or other culls without being charged the discriminatory rate of freight.

For the benefit of your readers, among whom I trust are some railway officials, I will relate an experience of my own that occurred about four years ago. That year I had handled a very large stock of hardwood; my lumber yard was in a very congested condition with the culls and rejects from the stock, and I wanted the room for new stock. I could not sell the culls and rejects as lumber for anything, so I applied to the railway people for a reduced rate (the wood rate), offering to sell it as wood, it being dry beech, maple and birch. I could not get the reduction unless I cut it to 4-ft. lengths, which entailed too much labor. A Buffalo dealer came my way and I showed him over the piles and sold him seven cars, filled to their utmost capacity (no measurement being made), for five dollars per car. On this grade of lumber the buyer had to pay 10 cents per 100 lbs. to Buffalo, as against 8¼ cents on good pine lumber. Under such conditions as these, is it any wonder that the hardwood trade is not what it ought to be?

Notwithstanding the strong demand there is for rock elm lumber from local and foreign industries, I prefer selling my timber to square timber men and allow my mills to stand idle rather than face the conditions above mentioned. Hardwood square timber, I understand, is carried on a specially low rate to Toronto, where it is rafted to seaport at Quebec.

Thanking you in anticipation of giving space for the above, I remain

Yours respectfully,
"MANUFACTURER."

---

OWEN SOUND, Jan. 10th, 1899.

Editor CANADA LUMBERMAN:

DEAR SIR,—In the last monthly issue of the CANADA LUMBERMAN there appeared a letter from Owen Sound, signed "Hardwood." I am pleased to note that friend "Hardwood" has, with others, become interested in this important matter, and hope our combined exertions may bring more quickly into effect a uniformity of freight rates, the lack of which has hitherto been the source of so much annoyance among hardwood lumber dealers throughout Ontario.

It is, I believe, an acknowledged fact that our Canadian railroad companies make a specialty of dealing more unjustly with lumbermen than with other classes of people, for not only do they discriminate unfairly in hardwood freight rates, but also in passenger rates; and it is most surprising that managers of such corporations, whose existence depends so largely on lumbering operations, should allow such a state of affairs to exist. Compare the position of the lumberman with that of the stock dealer. The freight bill of the former exceeds annually by 90 per cent. that of the stock dealer, yet the latter, when shipping to Toronto or Montreal, as the case may be, is presented with free passage to destination, where he completes his business, and is then granted return passage home at the rate of one cent per mile. Of course, to offset this, the railway companies may offer as an explanation that in consequence of stock being classified perishable, it is necessary for a man to accompany the stock, so as to be on the ground to receive same at destination. But is it not of vastly more importance for the lumberman to accompany his consignment, and is he not entitled to equal or even greater privileges, having so much more money at stake. We have to assume the responsibilities of shortages or losses in transportation, together with small margins and extreme freight rates, and occasionally, if not frequently, we meet with unscrupulous dealers, and are compelled in such cases to follow our lumber to its destination to secure settlement, and in event of such misfortune we are allowed to travel at the rate of three cents per mile, or in other words, we are granted the same privilege when travelling as a person whose patronage to the railway company amounts to probably less than fifty cents in a year.

While we do not ask for anything unreasonable, yet we feel that such discriminations are grossly dishonest, and should such important matters as mentioned by your correspondent "Hardwood," together with the above, be fairly and intelligently submitted to the railway companies, they should at once see the ridiculous imposition and offer some redress. I think we might reasonably expect a grant of equalization in lumber rates and a passenger rate of say two cents per mile. Hoping to hear from others who are equally interested,

I am, yours truly,
"SHIPPER."

---

OWEN SOUND, ONT., Jan. 7th, 1899.

Editor of the CANADA LUMBERMAN:

DEAR SIR,—Even at the risk of appearing as if Owen Sound lumbermen wish to monopolize you reading pages, as they evidently do the advertising pages of your weekly, the writer must add a word of approval to "Hardwood's" letter in your January number.

To one familiar with the facts of the case, it is little less than astounding that the hardwood shippers and mill men have borne such unjust discrimination so long, and it argues poorly for the intelligence of the hardwood men generally, when they look for relief to the Pine Men's Association. The injustice that is being done us can best be stated by giving an example of how present rates work. The writer being a hardwood shipper, loads an ordinary box car with maple lumber, average weight, 4½ lbs. per foot, loading 9,000 feet; weight of car, 40,500 lbs.; rate to Buffalo, Tonawanda or Suspension Bridge, for shipment east or elsewhere, 10 cents per 100 lbs.; cost of shipping this car, $40.50; average cost per M, $4.50.

My pine colleague loads a car of pine for same point, putting on 10,000 feet; weight of same, 27,000 lbs.; rate to same points as above, 8¼ cents per 100 lbs.; freight on above, $22.27; average freight per M, $2.22, or slightly less than half of what it costs us to ship hardwoods to the same points. And remember that the railroads performed exactly the same service in each case, and even in case of accident or damage to the shipment, the value of the pine shipment would undoubtedly be more than the hardwood shipment.

The above needs no comment, as it speaks for itself, but now stirred by the protests of the hardwood men in the association, the pine men have interested themselves, and you remember the old saw, "The mountain labored and brought forth a mouse"—they are trying to persuade the railroads to lower the rate for export lumber, something that will not benefit the average shipper an iota.

I am not blaming the pine men; they understand their business, and know that any change in rates would not benefit them in any way, while, if they were equalized, they would harm them, but what I am kicking at is for hardwood men to entrust them with the doing of OUR OWN business. I would suggest that a mecting be arranged between all the hardwood men that can be got together (even a few would suffice), to appoint some competent man to stir up the shippers and mill men (for in these days of fierce competition, what will help one will help the other). This can be done by correspondence, at little cost, and the writer will gladly pay his share of the expenses of the campaign.

Respectfully yours,
HARDWOOD SHIPPER.

---

PARKERSVILLE, ONT., Jan. 9th, 1899.

Editor CANADA LUMBERMAN:

DEAR SIR,—I notice in your January number a letter from "Hardwood" Owen Sound, respecting the rate on hardwood lumber. There should be no time lost in bringing this to the notice of the railways, as a great number of small mills ereoted for the purpose of manufacturing hardwood have been forced into bankruptcy and idleness by the high freight rate and low prices. The railways should favor the small mills—they go back several miles from the railway and work up timber that cannot be got to market any other way. The price of maple and birch has been from $10 to $11 per M. f.o.b. cars for common and better culls, of which there are about 30% not saleable. The contentions of the railway authorities that hardwood lumber is more valuable than pine is quite absurd. I hope other mill men will make themselves heard.

Yours truly,
W. PARKER.

## INVITATION TO THE HARDWOOD TRADE.

CINCINNATI, OHIO, Jan. 13th, 1899.

Editor CANADA LUMBERMAN:

SIR,—I desire to congratulate you upon your able editorial under the head of Valuable Lumber Associations, in your issue of January, this year. I also notice that you have part of the rules of The National Hardwood Lumber Association that applies to the different kinds of lumber manufactured in the Dominion, which your people in common are interested with us in this country. There are a great many different kinds of lumber that are shipped from the United States into the Dominion which doubtless your constituency would desire to be conversant with, and if it is not too much trouble I would ask that you publish the balance of the list. We desire it distinctly understood among the manufacturers and wholesale dealers of the Dominion of Canada that we would be much pleased to have them become members of our National Association, as they, like us, are as much interested in uniform inspection throughout the world as we, as that is the object of our Association. It will certainly be a matter of great pleasure to the manufacturers and wholesale dealers who consign their stock to buyers or sell at home on these rules, to know that this Association now numbers among its members some of the largest and best of the manufacturers and wholesale dealers of the United States, and it is rapidly growing. Many cities in this country have adopted it as their standard of inspection, and from the present outlook it will not be long before, in all probability, it will be universally adopted. These rules are subject to a change at any meeting of the Association, and there is no reason why the people who are interested in Canada should not have a voice in their changes as well as our members here.

The dues are three dollars per annum. The next meeting will be held on July 13, 1899, at Charlevoix, Mich. It will be certainly a pleasure to have as many of your people attend this meeting as possible, and a cordial invitation is hereby extended to any manufacturer or wholesale dealer in Canada. All remittances should be made to A. R. Vinnedge, Secretary, The National Hardwood Lumber Association, Division and North Branch Sts., Chicago, Ill.

Trusting that you will give this matter all the publicity possible, I am,

Yours truly,
The National Hardwood Lumber Association,
W. A. BENNETT, Pres.

Lack of space in this issue renders it impossible to publish the balance of the rules referred to by Mr. Bennett. This we may do at some future time, should we consider them of sufficient interest to the lumber trade in general.—THE EDITOR.

## LUMBERMEN'S ASSOCIATION FOR THE MARITIME PROVINCES.

ALBERT, N.B., January 16th, 1899.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—In reference to the formation of a Lumbermen's Association for the Maritime Provinces, we have often wondered why such an association was not formed long ago. Some few years ago we were the instigators in getting together at Moncton, N.B., a few of the lumbermen from Nova Scotia and New Brunswick to talk over the much discussed sawdust question, that was then agitating our minds. We had quite an enthusiastic convention, and a large delegation from both provinces, but we noticed that a large percentage of the heavy operators paid no attention to the meeting. Our opinion is, that if some of the leading lumbermen in both provinces would take a little interest in the matter and call a convention, they would find a representation at the place of meeting that would astonish them. You can understand that for any of the small operators to notify Mr. A. Gibson or Senator Snowball, or others we might mention, to attend such a meeting, would avail nothing, because they would pay no attention to the notice. But, on the other hand, if such men as these would notify the small operators, such as ourselves, we would be certain to attend, and the formation of an association would be the result. Without such men as we have mentioned, the association would not be a complete success. Our humble opinion in the matter is, that a "Lumbermen's Association" would be of incalculable benefit to lumbermen generally, and we would be only too glad to assist in any way possible to bring about such an organization. We would be pleased to hear from others, and to learn their views.

Yours, truly,
C. & I. PRESCOTT.

## OBITUARY.

J. LARKIN COOK.

Mr. J. Larkin Cook of the firm of Cook Bros., lumber merchants, Toronto, died at his home a fortnight ago, in the 73rd year of his age, as the result of a complicated illness of some years duration. The firm of Cook Bros. consisted originally of the late J. W. Cook, ex-M. P., of Williamsburg; George Josiah Cook, the present president of the firm, and the deceased. They succeeded to the business of the late Captain George Cook, who established it about 100 years ago, and was one of the first manufacturers to export timber from Quebec to the old country. Deceased was a brother of Mr. S. S. Cook, ex-M.P.P. for Dundas, of the late Mr. J. W. Cook and of Mr. H. H. Cook, ex-M.P. for East Simcoe. The family was of United Empire Loyalist stock, and as far back as the establishment of responsible government in Ontario took an active part in promoting Reform views. From 1828 until the era of responsible government an uncle of the deceased, Captain Fred Cook, and a Mr. Shaver represented Dundas county. The father of the deceased fought at the battle of Crysler's Farm in 1813, and for his services obtained the Victoria medal. He also fought in the war of the rebellion of 1837 on the side of the administration. The late Mr. Cook married Miss White daughter of James White, of Dalston, Simcoe county. He never occupied a public position in politics, but he was an active supporter of the Reform party. As a business man he was successful and energetic.

Mr. T. J. Aquin, ex-Mayor of St. Henri, Que., is dead, at the age of 52 years. Ten years ago, in company with Mr. L. P. Itzweire, he established a sash and door factory and planing mill, which developed into an extensive business.

Mr. William A. Ralph, one of the best known lumbermen's agents on the Ottawa River, died in Ottawa early in January. Deceased, who was 64 years of age, had been for twenty years in the employ of William Mason & Sons. Upon the dissolution of this firm a few months ago, Mr. Ralph engaged with the E. B. Eddy Company.

# THE CONCATENATED ORDER OF HOO-HOO.

Some Particulars of the Society.—Portraits of the Members in Manitoba.

FOR the benefit of those unacquainted with the modus operandi of the Concatenated Order of Hoo-Hoo, a few explanatory remarks may be offered. It is a society formed some years ago in the United States, being exclusively of a social character, and composed of persons engaged in the manufacture and sale of lumber, timber, lumber trade journal men, general officers and principal agents of railroad companies, and men engaged in the sale of saw mill machinery and supplies.

The initiation fee is $9.99, and the dues 99 cents per year. At each initiation the sum of $3.33 is allowed from each fee for the purpose of providing a spread or entertainment for those present. The regular annual meeting is held on the ninth day of the ninth month, but local branches are permitted to meet as frequently as is desired. The membership is limited to 9,999. There are nine chief officers, known as the Supreme Nine, and designated, in order of importance, as follows: Snark of the Universe; Senior Hoo-Hoo; Junior Hoo-Hoo; Bojum; Jabberwock; Custocatian; Scrivenoter; Arcanoper; Gurdon. The chief executive office is now held by Mr. Nelson A. Gladding, of Indianapolis.

The lumbermen in the United States have found the order of material advantage. It has brought them together in social intercourse, which has helped to oil the wheels of business and promote general good feeling among the trade. The membership at present is, approximately, 6,000, including, as stated in a former issue, two branches in Canada, one being at Vancouver, B.C., and the other at Winnipeg, Man. The concatenation at Winnipeg is of the more recent date, being held on November 12th last. Thirteen lumbermen doing business in that province were initiated into the secrets of the order, and after recovering their equilibrium, unanimously selected Mr. John C. Graham as their vicegerent for Manitoba. Another concatenation will likely take place in Winnipeg on February 8th, simultaneously with the annual meeting of the Western Retail Lumbermen's Association. It is with much pleasure that we present below portraits and some particulars of the members of the Winnipeg branch.

MR. J. C. GRAHAM.

The vicegerent for Manitoba, Mr. J. C. Graham, was born at St. Catherines, Ont., on November 26th, 1860. At eighteen years of age he became a purser on a lake steamer, and for eight years was associated with a steamship company in different capacities. In 1886 he launched out as a railroad conductor, being thus engaged for two years. His connection with the lumber business commenced in the year 1888, and for the next ten years he was manager of the sales department, and a member of the firm of Graham, Horne & Company, Fort William, Ont. In the year 1897 he was appointed manager of the Winnipeg branch of the Rat Portage Lumber Company, to which he now devotes his exclusive attention. Mr. Graham is a general favorite among his confreres, as is evidenced by his unanimous appointment as vicegerent.

MR. D. C. CAMERON.

Mr. D. C. Cameron is president and general manager of the Rat Portage Lumber Company, of Rat Portage, Ont., and may be said to be the lumber king of that district. The saw mills of the company at Rat Portage manufacture upwards of 60,000,000 ft. of lumber annually, while in addition they have an extensive sash and door factory and planing mill. Mr. Cameron, although a comparatively young man, has shown much ability in the management of this extensive concern.

MR. R. H. O'HARA.

Mr. R. H. O'Hara is a member of the firm of Barclay & O'Hara, retail dealers, Brandon, Man. He is 46 years of age and was previously engaged in the lumber business at Quebec and at New Westminster, B.C. Mr. O'Hara is a director of the Western Retail Lumbermen's Association.

MR. JOHN M. CHISHOLM.

Mr. John M. Chisholm is a native born Canadian. For the past seven years he has been manager for Messrs. Dick, Banning & Company, whose saw mills are at Rat Portage. This company manufacture about 7,000,000 feet of lumber annually. They have for some years secured the contract for the supply of lumber to the city of Winnipeg, which amounts, approximately, to 2,000,000 feet. Under Mr. Chisholm's management, the firm has become noted for its enterprise.

MR. JOHN DICK.

Mr. John Dick is secretary-treasurer of the Western Retail Lumbermen's Association. In 1872 he became connected with Dick & Banning, lumber manufacturers, of Winnipeg, as their bookkeeper. Ten years later he was taken in as a partner, when the firm name was changed to Dick, Banning & Company.

MR. GEORGE W. CAMPBELL.

Thirteen years of the life of Mr. George W. Campbell were spent at Vancouver, B.C., in the employ of the British Columbia Mills, Timber and Trading Company. In 1898, he was appointed to look after the Eastern business of the company, with headquarters in Winnipeg. He is an enthusiastic member of the Hoo-Hoo order.

MR. RICHARD VIGARS.

For fifteen years Mr. Richard Vigars has been engaged in the lumber business at Port Arthur, Ont., he being the chief member of the firm of Vigars & Company. This firm operate a splendid sawmill on Thunder Bay, having steam power, and a capacity of 50,000 feet per day, to-

gether with dry kilns, etc. The output is chiefly red and white pine lumber, which finds a ready market in Manitoba.

Mr. Henry Byrnes.

Mr. Henry Byrnes is associated with G. B. Housser & Company, of Portage la Prairie, Man., making his headquarters in Winnipeg. He carries in stock an ample supply of lumber, sash and doors, etc.

A. F. E. Phillips.

Mr. A. F. E. Phillips is a native of Quebec, and is 29 years of age. He was associated with the Federal Bank until that institution went into liquidation, when he engaged with the Minnesota & Ontario Lumber Company of Norman, Man., his duties being quite varied, and including those of traveller, foreman, shipper and scaler. Since the year 1892 he has represented the Brunette Sawmill Co., and the Pacific Coast Lumber Company, of New Westminster, B.C., being their Winnipeg representative. He devotes his attention to the interior car trade, which amounts to a considerable business in that district.

Mr. D. B. Sprague.

To Mr. D. B. Sprague belongs the distinction of being the youngest member of the Hoo-Hoo order in Canada. He is a nephew of Mr. D. E. Sprague, lumber manufacturer of Winnipeg, was born in township of North Gwillimbury, near Toronto, is 22 years of age, and a graduate of the British North America Business College. Five years ago he removed to Winnipeg to become junior clerk in the office of D. E. Sprague, and by strict attention to business he has advanced to senior book-keeper. He is a great lover of manly sports, such as bicycling, curling, lacrosse, etc.

Mr. G. B. Housser.

Forty-five years ago Mr. G. B. Housser was born on a farm in South Cayuga, county of Haldimand, Ont. Upon reaching manhood, he was employed for five years with Messrs. J. V. Wisner & Son, implement manufacturers, of Brantford, Ont., but a desire to "go west" culminated in his acceptance, in 1881, of the position of accountant with the lumber firm of Dick & Banning, of Winnipeg, with whom he remained for nine years. In 1890 Mr. Housser formed a partnership with Mr. S. R. Marlatt, of Portage la Prairie, Man., under the firm name of Marlatt & Housser, conducting a retail lumber yard at that place. One year ago Mr. Marlatt disposed of his interest to Mr. H. Byrnes, of Winnipeg, and the firm name was changed to G. B. Housser & Company.

## TRADE OPENINGS.

Messrs. Goodwin & Company, Birmingham, England, desire to receive quotations on 200 gross, Canadian broom handles, 50 inches long, and 1⅛ inch thick, delivered at Cardiff, South Wales. The requirement is for a nice white handle, free from knots and imperfections.

The Canadian High Commissioner at London, England, states that there is a large and constantly increasing demand in Great Britain for a commodity known as wood flour, of which Canada might supply unlimited quantities. It is not coarse sawdust, but the fine dust that results from the manufacture of hardwood, and it can be artificially produced by kiln drying hardwood sawdust. It is used in the manufacture of explosives, taking the place of charcoal.

United States Consul Halsted, writing from Birmingham, England, states that there has been a large sale of American broom handles. One agent informed him that he could have disposed of many more if the ends had been "turned in," the favorite style for broom handles in England. His firm, he said, worked along the line of least resistance, and having once succeeded in inducing an American manufacturer to endeavor to make broom handles exactly like those of English manufacture, but finding them on receipt to have been turned in a rough and slovenly manner, they simply sent them back to the United States and have made no further effort in that direction.

Unitec States Cansul Covert, of Lyons, France, states that shooks for silk boxes and stave wood for wine and liquor barrels would find a good market in Lyons. Manufacturers inform him that they would buy sawed and planed boards from America. They must be about ¾ of an inch thick, length and breadth being immaterial. It is not worth while to attempt to send boards cut ready to be made into boxes. The merchants who buy the boxes first arrange their goods in piles as they intend to ship them. The packer is then sent for, and he measures the piles and makes his boxes to fit them. Merchants never make a contract for boards until after the forestry commission has fixed the price for timber. It is believed that Americans could sell much below these prices after they had learned the rate for the year as established by the commission.

Writing of the lumber trade, United States Consul Tourgee, of Bordeaux, France, says: Most of the trade in hardwood lumber products is done by English houses. Of course the product originally comes from American mills. Wagons, spokes, and handles, and all turned goods in this district are, I think, imported from England, though the wood itself is mostly of American origin. Whether it would pay to seek to get this trade direct, is a question which can only be determined by months of careful study on the part of one thoroughly familiar with every branch of the business. Though I have been a manufacturer in this line and have consequently a particular inclination to the study of conditions affecting this trade, I should hesitate to advise any manufacturer to enter this field without some months of careful study of actual conditions, not of the market merely, but of the ultimate consumption. Judging from what I have learned, I should doubt the policy, of competing with English trade, which is carried on by customers of American producers.

Mr. D. M. Rennie, Dominion Commercial Agent at Buenos Ayres, South America, writing to the Department under date of November 11th, 1898, says: During the two months I have noted the arrival of 56 cargoes of lumber, 25 of which were white pine, 16 pitch, and 16 spruce. The demand for white pine has not yet begun, and the market is overstocked. The pitch pine and spruce cargoes were placed promptly on arrival. Arrivals after 23rd September were subject to the extra duty of 10 per cent. and the loss to importers who had sold to arrive, was considerable. As advised in mine of 13th October, the duty on spruce, white and pitch pine is now $8.44, an increase of $2.08 per M. feet. This additional duty is to be collected up to 31st December, 1899. Under the circumstances it is not likely that the Government will at present accede to the reduction on valuation of spruce as petitioned for.

Mr. Thomas Moffat, commercial agent at Cape Town, South Africa, has submitted to the Dominion Government a somewhat comprehensive report on the trade of Cape Colony. The total imports into the colony in the year 1897 amounted to $89,659,390. In that year unmanufactured goods are imported to the value of $1,146,495; planed or gorooved wood, $848,705; wood manufactured, other than furniture, $651,105. There was imported by the Colonial Government unmanufactured wood to the value of $222,400, making the total import of that class of wood $1,358,895, classified as follows:

| Description. | Value. |
|---|---|
| Ash | $ 14,075 |
| Bass | 7,705 |
| Hickory | 23,030 |
| Karri | 6,965 |
| Masts and spars | 2,915 |
| Pine | 1,028,780 |
| Poplar | 6,535 |
| Teak | 204,640 |
| Walnut | 18,175 |
| Other kinds | 46,075 |
| Total, 1897 | $1,358,895 |

Referring to the importations of pine lumber from New York, Mr. Moffat says that there is little doubt that more or less of this product was supplied by Canada. He gives a list of the many articles which Canada is shipping to Cape Colony in competition with the world, these including sawmill and woodworking machinery, engines, boilers, belting, furniture, hardwood fittings, wooden ware, doors, joinery, lathing, ceiling, and interior finish.

## A GENEROUS RESPONSE.

An appeal was recently made by Mr. Aubrey White, Assistant Commissioner of Crown Lands, to some of the lumbermen of Ontario for financial assistance towards the sustenance of that deserving institution, the Sick Childrens' Hospital in Toronto. The response was most generous, and showed, in no slight degree, the liberality of the lumbermen. Upwards of $1,000 was donated, the following firms contributing: Arthur Hill, Saginaw, Mich., $100; Mossom Boyd, Bobcaygeon, $100; L. P. Graves, Holland & Emery Lumber Co., Buffalo, $100; David Gilmour, the Gilmour Co., Trenton, $100; W. J. Shepherd, Georgian Bay Lumber Co., Waubaushene, $100; J. J. C. Thompson, Robert Thompson & Son, Hamilton, $100; Gillies Bros., Braeside, $50; F. H. Clergue, Sault Ste. Marie Pulp & Paper Co., Sault Ste. Marie, Ont., $50; Alexander Fraser, Westmeath, $50; Chas. Beck, Penetang, $25; Wm. Thompson, Longford Mills, $25; Imperial Lumber Co., Toronto, $25; E. W. Rathbun, the Rathbun Co., Deseronto, $25; Wm. Mackey, Ottawa, $20; A. McPherson, Longford Mills, $10; Chas. McCool, Geneva Lake, $5.

## FORECAST OF THE LUMBER OUTLOOK.

In an interview on the outlook of the lumber trade, Mr. Frank J. Saxe, manager of the Export Lumber Company, of New York, stated that he believed the year 1899 would be an exceptionally good one. "We are at peace with all the Latin-American countries," said Mr. Saxe, "and they are our heaviest consumers. We ship lumber, principally white pine and walnut, to many countries, including those on the Pacific Coast of South America, Van Dieman's Land, Australia and others on the Pacific. I do no remember a year when the prospects of the trade were so good at the opening of the season as they are to-day. There seems to be a good steady demand in every country for our white pine. Trade with Argentine may be light, on account of her difficulties with Chili over the boundry question, but that is the only dark spot on the whole horizon, We are having a good trade just now with Germany in white oak and walnut."

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## THE JOINT HIGH COMMISSION.

ANOTHER month has passed, and no agreement has been reached by the Commissioners at Washington as to the basis of a treaty. This can be attributed in large measure to the difficulty of reaching a settlement of the lumber and log question. When this vexed problem is solved, it is believed that the negotiations will very soon be brought to a close ; in fact, we are told that on the other questions the Commissioners are already agreed.

The death of Hon. Nelson Dingley, one of the United States commissioners, and who was very largely responsible for the present high tariff on lumber, was a matter of much concern to that country. At time of writing his successor on the Commission has not been named, but it seems probable that Representative Tawney, who is an advocate of the two-dollar duty, will be the choice. The Michigan lumbermen are leaving no stone unturned in their efforts to effect a settlement which will permit them to obtain Canadian logs. To this end they are opposing the selection of Representative Tawney.

Acting on the invitation of the United States representatives, a few of the Ottawa valley operators visited Washington early in January, to discuss the situation with the lumbermen of the United States. Their main object was, we believe, to explain the conditions which surround the lumbering industry in Canada, and to correct the erroneous opinion that white pine is manufactured here cheaper than in the United States. A statement was presented showing that the actual amount of Canadian pine and spruce entering the United States for consumption was from 400,000,000 to 450,000,000 feet annually, which is about seven per cent. of the annual production of white pine lumber in Michigan, Wisconsin and Minnesota, and less than two per cent. of the total lumber production of the United States. The absurdity of the contention that Canadian competition appreciably affects American lumber prices, is at once apparent.

The Newspaper Publishers' Association has taken up the cudgels in favor of free pulp, and in this way is lending assistance to the free lumber movement, as the principle involved in each case is the same. The Canadian policy is free lumber and free pulp, or the prohibition of the export of saw-logs and pulp wood.

It is difficult to understand the attitude assumed by some of the Michigan lumbermen in advocating a reduction of the lumber duty to one dollar. What they are interested in is the securing of access to the Georgian Bay timber, in order that they may continue to operate their sawmills. This will not be accomplished by a reduction of the lumber duty. As we understand it the Ontario government will permit logs to be exported only in consideration of free lumber, which is regarded as a fair equivalent. It was for this reason that the Georgian Bay lumbermen refused to accept the invitation to go to Washington to confer with their United States brethren. They are opposed to any form of compromise, and in this they are backed by the Ontario government. The anxiety of the Michigan lumbermen and certain other agencies in the United States to secure a reduction of the lumber duty is regarded as the strongest evidence of the expediency of the Ontario law.

## PUBLICITY IN THE LUMBER BUSINESS.

THE peculiar nature of the lumber business offers few opportunities for persons thus engaged to become skilful in office management. A lumberman may attain success in his particular field, and yet possess but a meagre knowledge of the many office details which pertain to the management of the average business. It is admitted that one of the most effective agencies in the successful direction of any business is judicious advertising. A few hints along this line might be of assistance to lumbermen.

Canadian lumbermen have not, in the past, given themselves that degree of publicity which has characterized other lines of commerce. But as each year they are competing more extensively in foreign markets, the necessity of advertising becomes greater. The various classes of lumber and wood specialties which are manufactured in Canada are but little known in Great Britain, much less in other markets of the world. Seldom a week passes that an enquiry is not received at this office for some particular class of stock, some late enquiries being for doors, butter plates, maple blocks, birch flooring, pulp, etc. In some instances the correspondent has expressed surprise that the manufacturers of the stock wanted were not represented in the advertising pages of THE LUMBERMAN.

The value of an advertisement depends greatly upon the attention given it by the advertiser. It is his privilege to furnish new copy for each issue of the paper if so desired. Where a lumberman is engaged in the manufacture of any special line of goods, an announcement of the fact should be made. It is for these specialties that buyers are frequently enquiring.

A few words as to the field covered by the CANADA LUMBERMAN. In the nineteen years of its existence, the number of readers of THE LUMBERMAN has steadily increased, and to-day it has a wide circulation in the Dominion, the Eastern States, and foreign countries. Within the past year many subscribers in Great Britain have been added to our list, these including the persons directly interested in Canadian timber products. The numerous complimentary letters received are evidence that the journal is read and appreciated by the trade, and that as an advertising medium it must be of value.

## EDITORIAL NOTES.

THE eighth annual meeting of the Western Retail Lumbermen's Association will be held in the city of Winnipeg, on Wednesday, February, 8th, simultaneous with the annual "bonspeil." It is expected that the attendance of lumbermen will be unusually large, and that a number will be initiated into the mysteries of the Hoo-Hoo, or black cat order.

MUCH of interest will be found in the communications from the trade, which appear in our correspondence page in this issue. Subjects of vital importance to lumbermen at large are touched upon, and it is hoped that the sentiments expressed will not be permitted to pass out of mind, but that they may be the means of drawing out discussion, and, eventually, of accomplishing the objects sought. The letters from the hardwood trade reflect the strong feeling which exists regarding the present discrimination in freights against hardwood lumber, and, to our mind, clearly show wherein such discrimination is working against the development of the hardwood industry and of the country in general.

BRITISH timber merchants visiting Canada for the first time frequently express surprise at the vastness of our forests and the excellent natural facilities for lumbering. They have shown equal astonishment that, in view of these advantages, more ample steamship service between Canada and foreign countries has not been established. They contend that this is one of the agencies which is most necessary to develop the export timber trade with Great Britain. Recently a large trade in spruce box-boards from New Brunswick has been opened up, but the business is hampered by the lack of shipping facilities all the year round at reasonable rates. A London merchant gives it as his opinion that there would be sufficient cargo of timber, wood pulp, farm produce, etc., for liners to Glasgow, Liverpool, Manchester, Avonmouth Dock, London, Hull, and perhaps other points, especially if the railroad freights from the inland districts to the seaboard in the winter months were placed at a moderate figure. In this relation Canadian shippers are at a great disadvantage in comparison with their competitors in the United States, where low rates are obtainable. We understand, for instance, that from Oshkosh, Wisconsin, the through rate on joinery to Liverpool is only about 50 cents per one hundred pounds weight.

NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WE WANT HARDWOOD LUMBER, MILL cuts. Must be able to ship by water. Correspondence solicited. V. H. SWEINHART & Co., 94 E. Washington St., Chicago.

### WANTED.

ORDERS FOR HEMLOCK LUMBER AND Timber. Logs in stock from ten to thirty feet. Load at Wiarton. Address PICKARD & ROWAN, Mar P.O., Ont.

### WANTED.

WHOLESALE LUMBER DEALERS AND Manufacturers who have lots of 50 to 200 M Lumber and Shingles for sale, should write me. Address, JOHN B. DOE, Buffalo, N.Y.

BAND SAW MILL FOR SALE AT FORT William; capacity of Mill, 40,000 feet in ten hours; also Planing Mill. Property includes 500 feet frontage on Kaministiquia River, suitable for an elevator. For particulars apply to C. C. ABBOTT Assignee, Estate Graham, Horne & Co., Fort William Ont.

### FOR SALE OR EXCHANGE.

FOR SALE OR EXCHANGE: A 12x14 ENgine; 50 ft. of 22 in. Stack; a Mortise Wheel and Pinion, 5½ in. face, teeth 80 and 22; a 50 in. Barber Water Wheel. All in good working order. Will take Stave and Heading Machinery, or Hemlock Lumber. GEO F. WEBTER, Creemore, Ont.

### WANTED.

SOFT ELM, ROCK ELM, BLACK ASH, BIRCH, Basswood, Red Oak, and Soft Maple Lumber, 1 to 3 in. thick and dry for prompt shipment. I will contract for any of this lumber to be cut to order for spring and summer delivery. Inspection at shipping point. Terms cash. E. C. BRADFORD, 71 Buhl Block, Detroit, Mich.

### FOR SALE.

THE UNDERSIGNED HAS ON HAND TWO and one-half million feet of Spruce Logs, lengths 10, 12, 14, 16 18, 20, 22, 24 and 26 feet and is prepared to manufacture same in any form desired having for this purpose a stationary saw mill equipped with gang edger, planer and shingle machine, with a capacity of 0,000 feet per day. A purchaser is desired who would contract for the entire cut of mill. Correspondence solicited. JAMES RITCHEY, Makinak (L. M. C. Co. Railway), Manitoba.

### FOR SALE.

FOUR HUNDRED ACRES TIMBER BIRCH and Hemlock; Saw Mill, capacity 30 M. per day; two Boilers 10 h.p.; Engine 85 h.p.; three Block Carriage; one 60-inch and one 55-inch Saw; Jack, with long chain, double edger, trimmer, slash chain; 2 small cut-offs; 2 Rip Saws rigged for chair bottoms. All in good running order. 500,000 ft. of Birch Logs in stock. A paying business; good reasons for selling. Address, Box 111, CANADA LUMBERMAN, Toronto.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

The last week of January witnessed more activity in the lumber business than the preceding weeks of the month. Some quite large sales of pine were made, particularly in the Ottawa valley, where it is said manufacturers have contracted for a considerable proportion of the coming season's production. In anticipation of a good year, wholesale dealers and exporters are buying liberally, and this fact may induce manufacturers to increase their operations in the woods beyond what was originally intended. Within the past fortnight several gangs of men have been sent to the logging districts. The conditions on the Georgian Bay are somewhat similar. Although in southern Ontario there has been a lack of snow for logging, in the Muskoka and northern districts this difficulty has not been met with.

It is yet too early to estimate the extent of building operations in 1899, but the amouut of work already arranged for produces a strong hope of a busy season. There will probably be more building in country districts than last year, when it was of considerable volume.

#### QUEBEC AND NEW BRUNSWICK.

Manufacturers of spruce lumber are holding quotations reasonably high, and consequently shippers have not contracted very heavily. The low prices at which stock was purchased last year are being used by buyers to secure better terms for the coming season's stock; but manufacturers seem to have resolved to make a fair margin of profit or cease business. The highest price yet paid at St. John for spruce lumber for spring delivery is $9.75, which is about $1.50 higher than the average price last year. In shipping circles there is not much doing; the rate on lumber to New York, from St. John, is lower, being $3.

#### MANITOBA AND BRITISH COLUMBIA.

The lumbermen of Manitoba are preparing for the annual convention which takes place next week, and at which the attendance promises to be unusually large. There is some movement of lumber at the present time, although it cannot be said that spring trade has yet commenced. As building prospects are particularly bright, retailers will no doubt increase their stocks materially in the near future. In British Columbia the lumber trade is without any special feature, although the era of low prices is probably at an end, owing largely to the scarcity of logs. The foreign trade is quite brisk, and several vessels are loading.

#### UNITED STATES.

The past week has been one of conventions, and consequently lumbermen have not devoted the usual attention to the getting of business. Transactions have been on a moderate scale, and have been confined largely to immediate requirements. Prospects, however, are of an encouraging character, and unless all signs should fail, there will be a brisk lumber trade in 1899. Eastern wholesale dealers report numerous inquiries for quantities of different grades for spring delivery, which would seem to indicate that consumers anticipate higher prices in the near future. There is an excessive demand for box lumber, which is in short supply and likely to further advance. Manufacturers generally are firm in their asking prices, and wholesale dealers are not inclined to contract for stock at the quotations given them. These remarks apply particularly to white pine. Hemlock lumber has made an all-round advance of 50 cents per thousand feet.

Hardwood stocks continue to be bought up close to the saw. In Michigan soft and rock elm are bringing prices from $4 to $6 higher than those which ruled two years ago. Even beech, which has been considered an unsaleable lumber, finds a ready market.

It is claimed that at northern mill points there is a pronounced shortage of lath, and sellers are asking $1.65 per thousand for white pine. Shingles are demanding some attention, and show no weakening in price.

#### FOREIGN.

British timber importers are contracting for goods for spring delivery only in a moderate way, as they believe that shippers' asking prices are higher than the conditions warrant. It must be remembered, however, that stocks in the British market are lighter than those of one year ago, while the production of Canadian lumber is likely to be curtailed during the coming season. There is also the fact that prices of spruce, red pine, and several classes of timber are strengthening. At London 3 x 11 and 3 x 9 3rd spruce are selling privately at £7 7s 6d per standard, although similar goods can be purchased at auction at 5s below these figures. Last year spruce found its way into new fields, and consumers are said to be willing to again contract for a supply. Looking at all the conditions surrounding the spruce market, there would seem to be reason to expect advanced prices and a good season in 1899.

The conditions of the lumber trade in France are about normal. It is expected that there will be a large consumption of wood during 1899, and that red pine will be maintained at higher prices. White pine joists, timber joists and hardwood also show signs of strengthening.

### STOCKS AND PRICES.

Thomas Myles' Sons, Hamilton, Ont., want 150 pieces 12 x 12, 30 feet, sound white pine timber.

J. E. Harroun & Son, of Watertown, N.Y., want good white pine mill culls, 1¼ inch, resawed for large boxes.

R. & T. Ritchie, of Aylmer, Que., have contracted to supply the Metropolitan Electric Company, of Ottawa, with poles.

The Metropolitan Railway Company, of Toronto, are taking tenders for the supply of 65,000 cedar ties, 1,000 cedar telegraph poles and 300 cedar trolley poles.

During the season of 1898 Messrs. E. I. White & Son, of Sand River, N.S., shipped to American ports 78 cargoes of piles and spars, aggregating about 55,000 pieces.

The Exploits Lumber Company, of Botwoodville, Nfld., will cut 10,000,000 feet of white pine lumber next summer, 5,000,000 feet of logs being now in the river. The manager of this company is George A. Fowler.

George Upham, of Fredericton, N.B., returned recently from the lumber camps on the Tobique river. He estimates the cut on that river this winter at 18,000,000 feet, a decrease of 7,000,000 feet as compared with last winter. Mr. Upham has contracted for all of Senator Baird's logs, about 1,500,000 feet.

At the annual meeting of the shareholders of the Rat Portage Lumber Company, it was stated by the manager that the company had over 600 men cutting logs in the woods. Some 50,000,000 feet will be taken out, which, with the stock now on hand, will give a good supply for next season's sawing.

The annual report of the Board of Trade of Montreal gives the following statement of forest products exported from that port during the year 1898: Ashes, pot and pearl, $35,321; logs, pine, $150; logs, all other, $836; lumber, $5,574,114; timber, square, $126,599; other articles,

The lumber production at Saginaw and Bay City, Mich., in the season of 1896 $26,723; total, $5,763,743.

was 304,000,000 feet. This is the smallest output on the river since 1866, when it amounted to 309,000,000 feet. There were rafted to Michigan from the Georgian Bay district 238,843,624 feet, nearly all of which went to the Saginaw river.

C. Desmairais, of Hull, has secured from the Bell Telephone Company a contract to furnish 2,000 cedar poles.

The Bradley-Myles Lumber Company, of Hamilton, Ont., have received an order to supply the British Admiralty with 100 car-loads of oak dimension timber, for use in the ironclads. The stock will be delivered at Liverpool early in the spring.

The Rat Portage Lumber Company have purchased the stock of lumber of the estate of Graham Horne & Company, of Fort William. This company have arranged with Graham, Horne & Co. to carry on the business in Fort William, which will be conducted under the same management as it has been for the past twenty-one years.

Henry Hibson, of the firm of Hibson, Briggs & Cooper, lumber merchants, Saginaw, Mich., is making a tour of the Ottawa valley for the purpose of buying a quantity of lumber. He states that Canadian white ash and basswood are in great demand by the lumber dealers of Michigan, chiefly for making furniture and inside finishing.

Seven timber berths were sold at the Crown Lands' office, Fredericton, N. B., last week, as follows : 3½ square mile block on White's brook, Restigouche county, to Wm. Currie, at $151 per mile ; 2½ mile berth on Nash's creek, Restigouche, to Nathanial McNair, at $18 per mile ; 5½ mile brook on Nictor lake, to T. B. Winslow, at $1.10 per mile ; two 9 mile and one 4½ mile berth on White's creek, Restigouche, to Wm. Richards, at upset price ; 2 mile berth on Ten Mile creek, St. John county, to J. E. Moore, at upset price.

Alliston Cushing, of St. John, N.B., returned recently from California, where he has been interested in quartz mines. It will be remembered that Mr. Cushing had the contract last year to furnish 8,000,000 feet of logs to Jerneagan & Fisher for the Electrolytic Marine Salts Company, at North Lubec. He had landed more than half of that quantity when the bubble broke, leaving him in a fair way to lose about $20,000 by the transaction. He, however, purchased all the logs and lumber in the plant No. 2, then partly constructed, and now has a sawmill at work converting the logs into lumber.

In Northwestern Ontario the winter has been very favorable for bush work, and a good deal of work is going on. The North Shore Timber Company, of which Jas. Whalen is manager, is getting out about 25,000 cords of pulp wood at Nepigon ; Vigars & Co. are taking out a good stock of logs for their Port Arthur mill ; Alger, Smith & Co., who are operating extensively on limits 2 and 3, Pigeon river, are through their cutting, and hauling is progressing satisfactorily ; while a large quantity of timber and ties is being taken out along the line of the new Ontario & Rainy River railway for use in the construction of that road. Graham, Horne & Co. are also getting out a large quantity of cedar culvert timber for the C.P.R. Work is plenty, and demand and wages for men are both good.

### OUTLOOK FOR CANADIAN TIMBER.

Reviewing the lumber market, the Timber Trades Journal, of London, Eng., says :—The quantity of timber and deals which continues to be taken into consumption is somewhat surprising, considering that we are supposed to be in the middle of the most inclement month of the year. Last January similar weather conditions prevailed, and the deliveries of the first two weeks of the respective years very nearly tally, with a slight advantage to the present one, but only in goods taken from ship's side. In nearly all the districts which receive their supplies grom the docks and yards of the metropolis, building operations are on the same extended scale that has marked the course of the previous year. It is something new to find spruce prices improving coincident with a declining market for Baltic whitewood. The shippers are lamenting over the difficulty of getting the prices of Swedish and other north of Europe productions back to their former high standpoint, but they have no sympathisers on this side. The forests of Canada can supply all that our markets here require, and colonial shippers have only to adjust the lengths of the spruce cut to suit the demand to take a much larger share of the whitewood trade from their north of Europe competitors. The major portions of the arguments used in favor of the merits of Baltic white, are founded on old fashioned prejudices, and it is plain from the stiffening of spruce prices that those who substituted spruce last year, on account of its cheapness, are ready to try the experiment again. Spruce is a most durable wood under many conditions, and now that it is being shipped in batten dimensions, if supplied in 6 to 26 feet lengths, would answer all the purposes of trade.

We have alluded before to the Canadian red pine, of which there is plenty to be had in the forests abroad. This is another building wood that seems to be unappreciated amongst the trade here, but only requires some alteration in the specification to bring it more under notice. 4, 3, 9 and 11 inch widths in good sound wood are scarce here, and likely to remain so, the tendency of the Baltic trade being toward the smaller dimensions.

The pine market is quiet, and the business done is not satisfactory as far as prices go. In wholesale lines the top price for best bright seasoned regulars is £26, but we hear that the Quebec firms are expecting to get an advance on last year s figures for the winter cut leading stocks. There does not appear to be nearly as much life now in this particular branch of the wood trade as formerly existed—at least in the London market. The enormous quantity of imported ready-made stuff, in the shape of doors and mouldings, in addition to the extension of the planed deals from the Swedish mills, may have had some exercising influence on the consumption of Canadian pine. At any rate, the prices now obtainable here, considering the high free-on-board cost and freight, are not sufficiently remunerative to encourage large importations in the legitimate way, and we fear all but the primest kinds of their class will be sent to market for shipper's account.

### THE BARBADOS MARKET.

Of the Barbados lumber market Messrs. Claremonte, Man & Co., in their report, say :

Since last advices, we note ten arrivals with white pine and spruce, and dealers are fairly well supplied. Last sales were—white pine, $21.26 for first, and $15.26 for second quality ; spruce, $16.75 for first and $11.75 for second quality. Pitch pine—we note the arrival of four ordered cargoes for dealers' account, contracted for at $23 and $24. The demand for Gaspe cedar shingles continues good, last sales at $5.06 @ $5.41. Last sales of spruce laying, $2.35 ; cedar laying, $2.76½ ; cypress $8.50 and $6.50 for 6-inch, 'hearts' and 'saps' ex Cora. Aarrivals : Brigt Boston Marine, from Tusket Wedge, 31 M feet white pine boards, $22.07 ; 10 M do plank $20.07; 41 M feet small boards $19.37 ; 11 M second quality do. $15.60 ; 6 M small second quality do. $14.07 ; 6 M feet spruce boards $17.60 ; 6 M small do. $13 ; 7 M scantling $19 07. Schr. Juanita, from Liverpool, N.S., 66 M ft. white pine boards $21.06 ; 6 M planed do. $20.01 ; 14 M second quality do. $15.01 ; 44 M second quality spruce $12.01. Brigt. Resultado, from Liverpool, N. S., 60 M white pine $21.06 ; 5 M second quality do. $15.07 ; 95 M feet spruce $17.07 ; 13 M feet hemlock scantling $12 ; 47 M spruce laying shingles $2.48. Schr. Syanara, from St. John, N. B., with 40 feet white pine $21.26 ; 32 M second quality do. $15.26; 75 M small do. $13.40; 3 M spruce $17.00 ; 20 M second quality do. $11.40 ; 10 M do. plank and scantling $15.00 ; 500 M shingles on dealers' account. Schr. B. B. Hardwick, from Clemont's port, N. S., with 11 M feet white pine $21.26 ; 13 M second quality do. $15.26 ; 137 M spruce $16.60 ; 3 M second quality do. $11.60 ; 2 M do. scantling $15.00. Schr. F. A. Rice, from Weymouth, N.S., with 49 M feet white pine $21.36 ; 18 M second quality do. $15.26 ; 71 M feet spruce $16.75 for first and $11.75 for second quality. Schr. Wapiti, from Yarmouth, 18 M feet spruce, 264 M shingles; shingles sold at $2.35. Schr. John A. McKie, from Windsor, N. S., 153 M feet white pine, 80 M second quality. Schr. Moss Glen, from Bridgewater, N. S., 73 M feet white pine, 41 M second quality, 15 M feet spruce scantling. Schr. A. S. Snare, from St. John, N. B., 97 M feet white pine, 54 M second quality.

Lee & Lentz have engaged in the lumber business at Tonawanda, N. Y.

### WHITE PINE STOCKS.

Statistics were published in a recent issue of the American Lumberman showing the production of lumber in 1898 and the stock on hand at the close of the year. Commenting thereon, this journal says :

While the product of the year was 78,000,000 feet less than that of the previous year, the stock on hand at the close of the season showed a much greater decrease than this, for the total stock reported from all the white pine and hemlock mills in Michigan, Wisconsin and Minnesota, along the Mississippi river and on Lake Erie, was but 3,494,739,000 feet, against 3,815,558,000 feet at the close of 1897; a decrease of 321,000,000 feet. Thus the stock on hand has been decreasing in much more rapid ratio than the product, testifying to the substantial character of the year's business and its improvement over 1897, good as the latter part of that year was.

But the figures on mill stocks do not tell the whole story. The stock on hand at wholesale points must be taken into consideration and in regard to that branch of the subject complete statistics are lacking. From some of the markets there are available and reliable reports. At Chicago there was quite a heave decrease in stock considering the volume carried—a little less than 10 per cent. Most other markets of importance show similar figures with a decrease in some of them even greater than in Chicago. But the wholesale markets alone are not sufficient to gain an accurate view of the general situation. The stocks on hand in retail yards and in the hands of heavy consumers must be considered.

The general impression is that stocks in the hands of retailers are lighter than ordinarily at this season. While there was some retailers who last fall bought quite heavily, particularly early in the fall, or in the late summer before the September advance in prices, most of the stock was pretty well exhausted by the end of the year and it is believed that the amount available for the winter's trade is light.

### DUTY ON SPRUCE LUMBER.

A cablegram has been received by the Department of Trade and Commerce at Ottawa from Commercial Agent Rennie, at Buenos Ayres, stating that on representations of the Dominion Government the duty upon spruce lumber had been reduced by the Government of Argentina by $2.40 per thousand. Large quantities of spruce lumber are annually shipped from Canada to the Argentine Republic, the Maritime Provinces and British Columbia being the principal exporters. In September last the duty was increased by 10 per cent., but as a result of Mr. Rennie's good work the duty is now less than it was six months ago.

### BUSINESS NOTES.

The Burrill Lumber Company, of Forestdale, Que., has obtained a charter of incorporation.

The Sheppard Lumber Company, of Orillia, Ont., has been incorporated, with a capital stock of $85,000.

The Johnston-Ford Lumber Company, of Ahmic Harbor, Ont., is reported to have assigned to J. C. Ford.

### SHIPPING MATTERS.

The schooner Arthur N. Gibson has been chatered to load lumber at Apalachicola for Halifax at $7.00.

Chartering is somewhat quiet, and a weakness in the market has developed. Two vessels have been chartered for first open water from Montreal to London, at 43s. 9d. From the St. John district tonnage is offering at 43s. 9d., but charterers are diffident in offering more than 42s 6d.

The planing mill of Matthew's Bros. & Company, on Dundas street, Toronto, was destroyed by fire on Thursday last. Some lumber was also burned.

### LUMBERMAN'S INSPECTION BOOK.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts.; Pembroke to Montreal, 8c.; Quebec, 13c. per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs. Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts.; lightered 19 cts. per 100 lbs. Pembroke to New York, track delivered 18c., lightered 20c. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

The rates at present in effect on the Canadian Pacific Railway to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. The rates are based on a minimum of 30,000 lbs. per car."

Summer rates to New York, via Albany and barge line, expired on November 28th, owing to closing of navigation on the Hudson river, and the usual all rail rates became effective, as follows: To New York, for track delivery, and all points on the Hudson river, or the New York Central and West Shore railways, from Ottawa, Hull, Aylmer, Deschenes Mills, 15c. per 100 lbs.; from Carleton Junction, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including litherage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

Summer rates to Montreal expired on November 15th, and the usual winter rates became effective as follows: From Ottawa, Hull, Aylmer and Deshcenes Mills, 5c.; Carleton Junction, 6c.; Arnprior and Braeside, 7c.; Renfrew, Eganville and Pembroke, 8c. The rate to Three Rivers is 4c. and to Quebec 5c. over the rate to Montreal. The minimum car load in all cases where rates are computed on a weight basis is 30,000 lbs.; when on a measurement basis 10,000 feet B. M.

The C.P.R. also make the following rates on seasoned pine lumber to West St. John, N.B., for export: From Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, $3.75 per M feet; Carleton Junction, Braeside and Arnprior, $4.00 per M feet; Renfrew, Douglas, Eganville and Pembroke, $4.50 per M feet. On lumber for local consumption at St. John, N.B., and common points the rate is 20 cents from Ottawa, Hull and Aylmer, and to Halifax 21 cents from same points. On seasoned pine lumber the rate from Ottawa to Oswego, N.Y., is $1.90 per M feet, and to Syracuse, N.Y., $2.20 per M feet; from Ottawa to Buffalo, 12 cents and to Detroit 14 cents per 100 lbs.; to Boston, Mass., and common points, 15 cents from Ottawa, Hull, Deschenes Mills and all points east thereof; 16 cents from Carleton Junction; 17 cents from Arnprior, Braeside and Renfrew, and 18 cents from Eganville and Pembroke, and proportionate rates from points further west on lumber for consumption in the United States. The export lumber rate is 13 cents from Ottawa and Hull, 14 cents from Deschenes Mills, Aylmer and Carleton Junction, and 15 cents from Arnprior and Braeside to Boston.

## CANADIAN EXPORTERS AND WHOLESALERS

**Keenan Brothers**
OWEN SOUND, ONT.

**WANT**
Rock Elm and Black Ash Dimension Stock.
Advise amount you would be able to supply if price is right.

**HARDWOOD LUMBER**
Winter-Sawed Stock is the Best. We commenced for the season on January 2nd, and make a Specialty of White Maple, Quarter Sawed Maple Mangle Rollers (Turned or Octagonal), Elm, Beech and Basswood Lumber, Etc. No correspondence neglected.
J. S. FINDLAY, Owen Sound, Ont.

# THE NEWS.

—A. W. James has opened a lumber yard in Cornwall, Ont.

—Mr. Nicholl, of Lindsay, is fitting up a shingle mill at Omemee, Ont.

—S. Brown, of Bracebridge, Ont., purposes putting in a small saw mill plant.

—It is stated that the Rathbun Company's mill at Lindsay, Ont., will be enlarged.

—J. P. Middleton, of Staples, has purchased a small saw mill near London, Ont.

—C. Simons, of Ruscom, Ont., is making preparations to build a saw mill on his farm.

—Want of snow is deterring the hauling out of logs for the local mills at Lancaster, Ont.

—The residence of W. E. Fillion, lumber inspector, Montreal, was destroyed by fire last month.

—James White, of Alexander, contemplates starting a planing mill and sash and door factory at Carberry, Man.

—William Evans and Thomas Samson have formed a partnership at Hampton, N.B., to conduct a lumber business.

—John Thacker has submitted a proposition to the council of Teeswater, Ont., to erect a large carriage and waggon factory.

—Messsrs. Leclaw & McDonald are running their mill at North Lancaster, Ont., Mr. Barney Gafferney being in charge of the levers.

—Mr. Colin Reid, of Bothwill, has put in a Stafford Timber Guage, manufactured by the Lancaster Machine Works, Lancaster, Ont.

—A new gang mill was recently put into operation at West Northfield, Lunenburg county, N. S., by Brum Brothers. The mill is first-class in every respect.

—It is announced that the Hastings Shingle Manufacturing Company of Vancouver, B.C., will erect a large shingle mill on Lake Hatcom, in Washington territory.

—The Carling Lumber Company have recently completed a new saw mill at Carling, in the Parry Sound district the mill having a capacity of 30,000 feet per day.

—Mr. Owen Fortune, of the Gilmour Company, of Trenton, Ont., is receiving the congratulations of his friends upon his recent marriage to Miss Morris, a popular lady of Belleville.

Mr. Carl Zeidler, Canadian Agent for Boech & Pollitzer, licensed wharfingers and forwarding agents, London, England, has removed his office to the Imperial Bank Building, No. 2 Leader Lane, Toronto.

—It is stated that the Royal City Planing Mill Company, of Vancouver, B.C., contemplate putting in machinery for the manufacture of sash and doors. The manager of this company is Mr. A. E. Woods.

—The estate of the late John Bryson, the rich lumberman, who represented Pontiac in the House of Commons, and who died in January 1896, is now the subject of litigation. It is probable that the case will be fought in the Supreme Court.

—The Jenckes Machine Company, of Sherbrooke, have furnished and installed at the mills of the Chicoutimi Pulp Company, two Replogle Relay Returning Governors, for regulating the Grinder Wheels. The Governors do the work very effectively.

—The Calhoun Lumber Company, of Calhoun, N. B., is seeking incorporation. The applicants are: Josiah Woods, of Westmoreland; H. N. Wood, of Sackville, T. B. Calhoun, of Calhoun Mills; J. C. Calhoun, of Albert; and N. G. Teed, of Dorchester.

—The Acme Veneer Works, of Orillia, Ont., has undergone a change of ownership, as we learn that Messrs. N. James & Son took control on February 1st. They propose to add some new machinery, which will enable them to turn out up-to-date work.

—Over 700 men are engaged on the construction of the Restigouche and Western Railway, which will extend from Campbellton to Grand Forks, N.B., a distance of 110 miles. It will pass through a country rich in forest resources, and will provide a short line to American points.

—The Restigouche Boom Company, of Campbellton, N. B., now incorporated by the legislature of New Brunswick, will apply at the next session of parliament for a Dominion charter, with power to take over the assets of the original company and to operate in Quebec and other provinces.

—In a letter to the CANADA LUNBERMAN, A. L. Cope & Sons, manufacturers of lumbermen's wooden supplies, pike poles, etc., state that they are building a water power mill at Wilberforce, Ont., which they expect to have completed this spring. Attention is directed to their advertisement on another page.

—Mr. R. B. Goddard, of Westmeath, Ont., is moving his saw mill up to Crow River in the Coulonge district, having secured a contract for sawing from Mr. A. Fraser of Ottawa. The lumber is to be used for building lumber camps, slides and dams. Mr. Goddard intends running his mill night and day, so as to get through before the ice breaks up in the spring.

—Messrs. A. & P. White, of Pembroke, Ont., are enlarging their mill considerably by putting in two large boilers, one circular saw frame, one double edger, one set of trimmers, one set of live rolls, one log canter and one large grip pulley for circular saw. This will increase the capacity considerably. The machinery was purchased from the Waterous' Engine Works Company, of Brantford, Ont.

—V. L. Emerson, of Baltimore, is said to have demonstrated the feasibility of converting the sawdust deposits at the bottom of the Ottawa river into gases which can be used as smelting fuel. He has devised a plan by which this deposit can be pumped out, converted into gas, and conveyed by a pipe line under pressure to smelting furnaces at the mines in the Ottawa vicinity, at a cost of about one-tenth that of coke.

—A change has taken place in the management of the Ontario Lumber Company at French River, Ont. Mr. Hancock has been succeeded by Mr. J. F. Gillies, who for a number of years has been manager for the Ontario Boom Company. It is learned that the Company's mill will be started early in the spring, aud will be kept at work throughout the season. Four large gangs of men are in the woods getting out logs.

—George St. Pierre & Company, of Rivere du Loup, Que., advise us that they have recently purchased two saw mills, one at St. Cyprien, Temiscouata county, and the other at Humqui, Rimouski county. In addition to the output of hardwood and spruce lumber, they will have in operation this year five shingle machines. It is probable that their mill at St. Honore will be removed to Rivere du Loup, where they have sufficient timber to stock the mill for fifteen years.

—The extensive business of Alexander Gibson & Sons, of Maryville, N.B., will hereafter be controlled by the Alexander Gibson Railway and Manufacturing Company, in accordance with an act passed at the last session of the legislature. The company is composed of English and Canadian capitalists, who have secured control of the Canada Eastern Railway, 200,000 acres of timber lands on the Nashwaak river, half a dozen saw mills in York and Northumberland counties, the Gibson cotton mills, at Maryville, and other assets. The entire property is valued at $7,000,000.

—The second lecture in the Teachers' Lecture Course, at the High School, Ottawa, was given recently by Professor John Macoun, botanist of the Geological Survey of Canada, the subject being "Forest and Forest Resources of Canada." The lecturer enumerated, by the aid of a map the large valuable forest areas in the Dominion yet untapped, awaiting but the coming of the railway to yield a rich and bountiful harvest. The growing importance of the pulp industry was commented upon, and the lecturer closed by exhibiting some interesting lantern slide views of native trees.

—Mr. E. C. Grant, manager of the Ottawa Lumber Company, was in New York last month attending the meeting of the Board of Trustees of the National Wholesale Lumber Dealers' Association. At this meeting it was decided to hold the next annual meeting at Boston, Mass., on March 1st, 1899. Mr. Grant extended to the Association an invitation to meet in Ottawa in the year 1900, and it is probable that the invitation will be accepted. The Association, Mr. Grant states, has established a Bureau of Information similar to Bradstreet's, a strong legal department, and a department for the securing of better freight rates, etc. The insurance question is also engaging the attention of the trustees. From figures submitted it was shown, that, whereas $2,500,000 had been paid in premiums, but $1000,000 had been recovered as compensation for losses sustained.

# WOOD PULP DEPARTMENT

## THE PROCESS OF MANUFACTURING MECHANICAL WOOD PULP.*

By W. A. HARE.

### PART I.—THE DEVELOPMENT OF THE WOOD PULP INDUSTRY IN CANADA.

WITHIN the past two or three years there has been a marked impetus given to the pulp and paper industry in Canada. When one considers the vast resources we have at hand, coupled with the splendid waterways and canals for transportation, and other facilities for the building up of this great and important industry, he is apt to wonder why these conditions were not taken advantage of before. Changes occur in existing avenues of trade very slowly, and though the condition of the industry is at present in its infancy, Canadians may be expected to take full advantage of their opportunities in the near future.

Wood pulp will, for many years to come, be used to supply the world's demand for a filler in the manufacture of paper, in many of the coarser grades of which it is the only constituent. Its use is more likely to widen than to be curtailed. A very large amount of paper is made today from linen rags, esparto grass, etc., and for the manufacture of the finer grades of paper these materials may be expected to find a ready market. In the manufacture of news paper wood pulp is used altogether, and as long as it can be produced cheap enough, there is little danger of a substitute being found. It is not confined, however, to the manufacture of paper alone, but is made into many useful articles of daily service, the market for which is increasing rapidly.

There is no reason to doubt that Canada will have a prosperous future, as far as this industry is concerned; and if the efforts put forth during the last two or three years are any forecast of the future, we will, in a few years, have good reason to be proud of the position this country will occupy as a producer for the world's markets. It is estimated that in the United States there are 1,200 pulp mills in operation, turning out an annual product of 1,500,000 tons of pulp, which requires the consumption of 2,000,000 cords of wood. There is an ever-increasing amount of this wood supplied from Canada year by year, which goes to show that the mills in the United States cannot obtain an ample supply from their own forests. There is no country in the world that is so eminently fitted for the establishment and expansion of this industry as Canada.

Any country, to be pulp producing to any extent, must possess three things which are factors in the development of this industry, i. e., water powers, spruce forests, and shipping facilities. Canada, fortunately, is abundantly favored in respect to these. Of the three, the first two are natural advantages, while the third is artificial to some extent. In water powers we have all that could be desired. The rivers of the Maritime provinces and Quebec have numerous falls and rapids, and those of Ontario are no exception, especially in the western part.

Our share of the black and white spruce forests of the world is larger than that of any other country, producing the finest raw material known for the manufacture of wood pulp. Coupled with these two natural advantages, is that of our transportation facilities, which are not surpassed in the world. The Maritime provinces are directly on the sea coast, Quebec enjoys the use of our great national waterway, the St. Lawrence, while Ontario is intersected with canals and rivers, which afford easy and cheap communication to tide water. By our system of canals and waterways we can transport pulp long distances by water, and in this way those long hauls by rail, which are comparitively so expensive, are obviated.

With regard to markets, it may be mentioned that Great Britain imported in 1897, 330,000 tons of wood pulp, three-fourths of which came from Norway. Canada supplied less than 3,000 tons. Here is a good market for some time to come, for all the pulp that can be manufactured in Canada. Our great competitors in the British market are Scandanavia and the United States. From the latter country we have nothing to fear, as their wood supply is almost exhausted, and the mills now in operation there are dependent to a great extent upon our forests—so much so that if an export duty were placed on Canadian pulpwood their exportations would cease.

Even the great forests of Norway and Sweden are showing signs of depletion; and it will only be by the enactment of strict forest regulations that the export trade will be kept up. It is a significant fact that the Scandinavian

* Paper read before the Engineering Society of the School of Practica Science, Toronto, and published by permission.

mills are taking wood now that would have been rejected a few years ago.

The quality of the pulp made in Norway and Sweden is not as good as that made in Nova Scotia and in other parts of Canada. It cannot be denied that some of the mills there, can, and do make as good pulp as is made in Canada; but the average mill does not. The writer has seen samples from many different Norwegian mills, and can say that with one or two exceptions the product was not equal to that manufactured in the Maritime provinces.

The Scandinavian pulp makers, in competing with us in the British market, have the advantage of a short ocean voyage, and also, in that they employ cheaper labor. But our possibilities of development are far beyond those of Scandinavia by virtue of our great natural resourses and advantages. Though we have to contend with the long carriage and high freight rates, it is only reasonable to suppose, that, with the growth of the industry, rates will be reduced.

The Canadian wood pulp industry has grown very considerably of late years. Newfoundland, if we may consider her as among the provinces of the Dominion, is just entering on an era of development that has long been retarded. One or two mills are in operation at present, while others are projected, that will, in all probability, be in operation soon. There are a number of valuable water powers on the island, while the spruce forests are extensive; the trees being of a smaller variety, and of slower growth, which adds to their value as pulp wood. Newfoundland spruce makes an extremely strong fibre and finds a ready market at prices in advance of the Canadian product.

The maritime provinces are well favored with extensive spruce forests, numerous water powers, and easy shipping facilities. The industry has advanced very much of late years, and by next year a number of new mills will be building or projected. Pulp making was carried on in the town of Bedford, in Novia Scotia, as far back as 1837, but it did not exist as an industry until 1894, when two mills went into operation. These mills, as well as the more recent ones, are equipped with modern up-to-date machinery, nearly all of which was manufactured in Canada.

In Quebec there has been the most activity; and it is here that we must look for the bulk of Canada's exports in wood pulp and paper. The numerous rivers that flow into the north side of the St. Lawrence, have many rapids and falls necessary to supply the required power; while further up the streams are the best and most extensive black spruce forests in Canada. These splendid natural advantages, together with the St. Lawrence River as an avenue of commerce, only need the capitalist and the engineer to transform the wilderness into a hive of industry.

In Ontario the possibilities for development are of no small character, especially in the western part, where there is more spruce, and, where the water powers are more frequent. Along the Ottawa and its tributaries there are many good sites, and before long we may look for their development. Explorers also inform us that in the north country there is an abundance of spruce especially suitable for pulp wood, and that numerous falls and rapids are to be found. Whatever the possibilities are of this part of the province, it is not likely that anything will be done there for many years to come, especially as so many good sites for mills are to be found nearer shipping ports.

Though British Columbia has as yet only one or two pulp mills, we may expect considerable activity on the western coast. While it is not likely that this province will market much pulp in Great Britain, owing to the great distance, yet there might be a profitable industry built up in manufacturing pulp and paper for Japan and Australia.

## PART II.—MECHANICAL PULP AND SULPHITE FIBRE.

It is the intention of the writer to confine his remarks to the process of manufacturing Mechanical or Ground Wood Pulp, but as there may arise some ambiguity as to the distinction between this product and that known as sulphite pulp, a few words in explanation may not be out of place.

The Sulphite Process.—The process of manufacture of sulphite fibre is a more difficult one than that of making mechanical pulp. Sulphite Pulp is worth more in the market and finds a ready sale if of good quality. It requires more raw material than "mechanical" to manufacture one ton of pulp, generally from 2¼ to 2½ cords. It is altogether a chemical process, with the exception of cutting up the log in small chips. The raw material comes in the form of pulp wood, which is sawn, barked, split and all knots bored, and then it is chipped up in a chipping machine. These chips are next broken to uniform size and screened to remove the sawdust. The wood is now prepared, and the next step is the chemical part where the wood is digested to its constituent fibres. It is essential that a great amount of care should be taken to procure entirely good sound wood, so that the pulp will be uniform and free from specks. It is for this reason that all knots are bored out. The acid is next prepared carefully, as too much care cannot be taken with this part of the process. The acid when made is kept in large tanks ready for use. The digestor is filled with chips, which have been prepared as described, and the requisite amount of acid introduced when it is closed up. Steam is now turned in, and kept on for 12 hours, or until the wood is all digested, when it is blown out into tanks. After being well washed to remove acid, and then screened twice, first coarse, and then fine, it is passed through the paper machine, and comes out as paper pulp. It is now finished as far as the pulp mill is concerned.

The Mechanical Process.—The Mechanical Process is, as its name implies, purely mechanical. In this process, which will be discussed at length later on, the wood is prepared almost in the same manner as in the sulphite process with this exception, that the bolt is not chipped, simply being sawm and barked. It then passes to the grinders where it is ground by revolving stones into pulp. It is then mixed with water and pumped to the screens, whose duty is to remove all pieces of splinter, etc., which are above a certain size. It is next passed onto the wet machine which, to be brief, removes the excess of water, and rolls it into large sheets. This is now finished as pulp; but it goes through a further process of removing more water, and baling, to facilitate shipping.

Uses of Pulp.—These two methods of manufacture are not rivals; each has its own place in the pulp industry, and one cannot supply the want of the other, more than to a very limited extent. Sulphite pulp can perhaps be used for many things that mechanical pulp is now used for, but it could not be economical, owing to the process of its manufacture being more expensive. It is a finer, softer and longer fibre than mechanical, and is used where these qualities are required, such as in fine writing paper, and paper for engraving, etc.; in fact all fine papers require more or less sulphite fibre, and some grades contain nothing else. Mechanical pulp is used in all papers of a more or less coarse nature, such as wrapping paper, etc. In making "news" paper both kinds are used, the propotion varying according to the quality of paper required and the general practice of the paper maker. Some makers use 15 per cent. of sulphite to 85 per cent. mechanical, while others think 20 to 25 per cent of sulphite is necessary. Even 40 per cent. of sulphite to 60 per cent. of mechanical is used in some mills, but when the per cent. of the former is as high as this the quality of the sulphite is inferior. The introduction of from 8 per cent. to 15 per cent. cotton waste improves the softness and finish of the paper.

Raw Material.—The woods used in the manufacture of mechanical pulp are principally the spruce, poplar or aspen, fir or balsam spruce, and sometimes hemlock. The great bulk of the pulp ground is made from spruce, it being the most widely dispersed of the above mentioned woods, besides possessing qualities which eminently fit it for the manufacture of ground pulp. It is found in three principal varieties, i.e., the white, red and black spruce. Of these three, the white spruce makes the whitest pulp, and the black variety has the toughest and strongest fibre. Poplar or aspen makes a beautiful grade of pulp, being soft, smooth and very white. It is not as strong, however, as that made from spruce. The great difficulty in manufacturing poplar pulp in this country arises from the fact that it is extremely difficult to secure sound wood. In many districts, principally in Nova Scotia and other parts of the eastern provinces, the poplar is apparently firm and sound to the eye, but on being split through the centre it is found to be discolored, and rotten at the heart. This black heart has to be entirely removed before the wood goes to the grinder, or the pulp will be full of specks, and almost useless. If black knot occurs, it will also have to be removed for the same reason. When clean wood can be secured, poplar or aspen makes a beautiful pulp, that will bring a high price and find a ready market. Fir or balsam spruce makes a short, mealy pulp. Its weight is less than the ordinary spruce, and consequently more raw material, by measure, is required to make a ton of pulp. It is also more bulky when baled, for the same weight, which adds to the freight charges. Fir pulp does not bring as high a price as spruce, and for the reason mentioned it is very little used. Hemlock is used to a very small extent where an inferior quality of pulp is required. It is hard to grind, and splinters more than spruce, and is therefore more difficult to screen. It is sometimes used with spruce by grinding both together, introducing say about 12 per cent. hemlock. This is only done, as in the case of fir, when an inferior quality of pulp is required. It is never introduced into "news" pulp.

It is the case with all these woods that the best pulp comes from the wood that has the longest and toughest fibre, and this is found in the trees of slowest growth and of greatest density. The Newfoundland spruce, for example, is of very slow growth and of such a specific gravity that it will hardly float. It makes a splendid pulp, which, I am told, brings a higher price than pulp made from Canadian spruce. In the same way, Canadian spruce, being of slower growth, makes better pulp than that from spruce grown in the United States. German experiments have proved that the slower the growth of the tree, the greater the strength of the pulp. Norwegian is said to be better than Swedish, and it is claimed that German is better than either, though it is hard to see how such could be the case unless the wood were grown in mountainous districts, or on poor soil.

Mixing Woods.—Spruce and fir, when mixed, make a very good pulp, a little whiter than pure spruce, and to a greater or less extent lacking in weight and strength according to the proportion of fir added, the fir being somewhat lighter than spruce. Spruce and poplar are sometimes mixed, and go very well together. The spruce gives strength of fibre and toughness, and the poplar adds whiteness, while the length of its fibre makes the mixed product softer than pure spruce. This product is also easier to handle on the wet machines, when the percentage of spruce is sufficient to give the strength of fibre that the poplar lacks. The great bulk of the mechanical pulp made in this country is almost, if not altogether, pure spruce of either the white or black variety. This is the most widely distributed of the different woods, and is also the best of them all for this purpose.

(To be Continued.)

John A. Campbell, jr., of Fredericton, N. B., has purchased the old mill site at Springhill and purposes erecting a large saw mill next summer.

## PULP NOTES.

It is rumored that a company is being formed for the purpose of erecting a pulp mill at Bathurst, N. B.

The British Canadian Timber and Manufacturing Company, of London, England, is said to be looking into the question of erecting a pulp mill in Canada.

The Canadian Society of Civil Engineers held their annual convention in Montreal last month. The programme included a visit of inspection to the extensive pulp mills of the Laurentide Pulp Co. at Grand Mere, Que.

When in Toronto recently, Mr. A. E. Bremner, manager of the Sturgeon Falls Pulp Company, stated that the manufacture of pulp at Sturgeon Falls, Ont., had been commenced, one mill being in operation, making 20 tons per day. Another was being built, and more would follow, until the daily capacity reached 120 tons.

The American Newspaper Publishers' Association, representing 157 daily newspapers in the United States, has presented to the Anglo-American Joint High Commissioners a carefully prepared argument in favor of free paper and pulp.

We have received a copy of the prospectus of the Bedford Electric Company, Limited, of Halifax, N. S. The directors of this company are Murdoch Chisholm, W. E. Crowe, M. E. Keefe, Robert O'Mullin, A. E. Soulis and E. T. Freeman, of Halifax, and the capital stock is placed at $250,000. In addition to carrying out other extensive works, the company have in view the establishment of a pulp mill at St. Margaret's Bay, where there is available 2,350 horse power. The company claims to have secured, in connection with its water privileges, about 20,000 acres of spruce forests, averaging not less than 30 cords of wood to the acre. The cost of manufacturing one ton of pulp is given as $27.25, while in England pulp is worth from $35 to $55 per ton.

Mr. Kyobasha Senju, one of the largest paper manufacturers in Japan, is now in Canada, and paid a visit of inspection to the large pulp mills at Sault Ste. Marie, Ont., on January 23rd. Mr. Senju buys 200 tons of pulp per month for his company in Tokyo, which supplies the five daily papers in that city. The only difficulty, he says, in the way of buying Canadian pulp is the excessive freight rates to Japan. With cheaper freight Canadian pulp would have no competition in Japan.

AND IS THE

**FASTEST CUTTING SAW IN THE WORLD!**

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

## Maple Leaf Saw Set

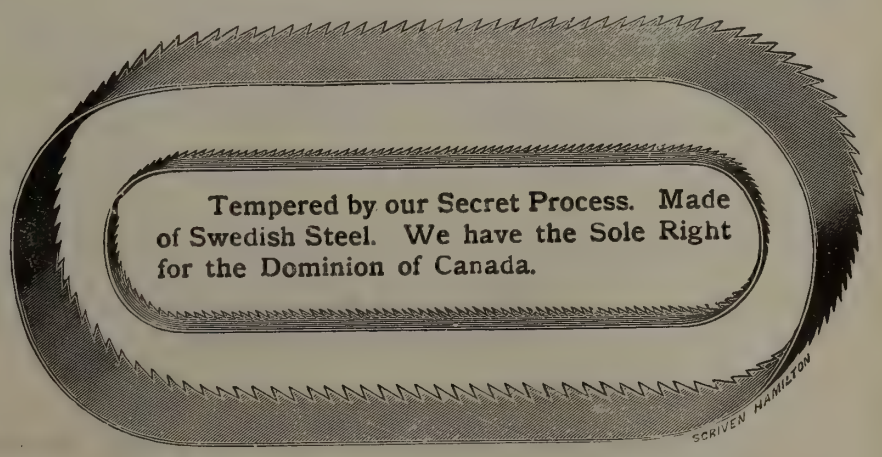
MANUFACTURED BY

**SHURLY & DIETRICH, Galt, Ont.**

**Directions.**—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

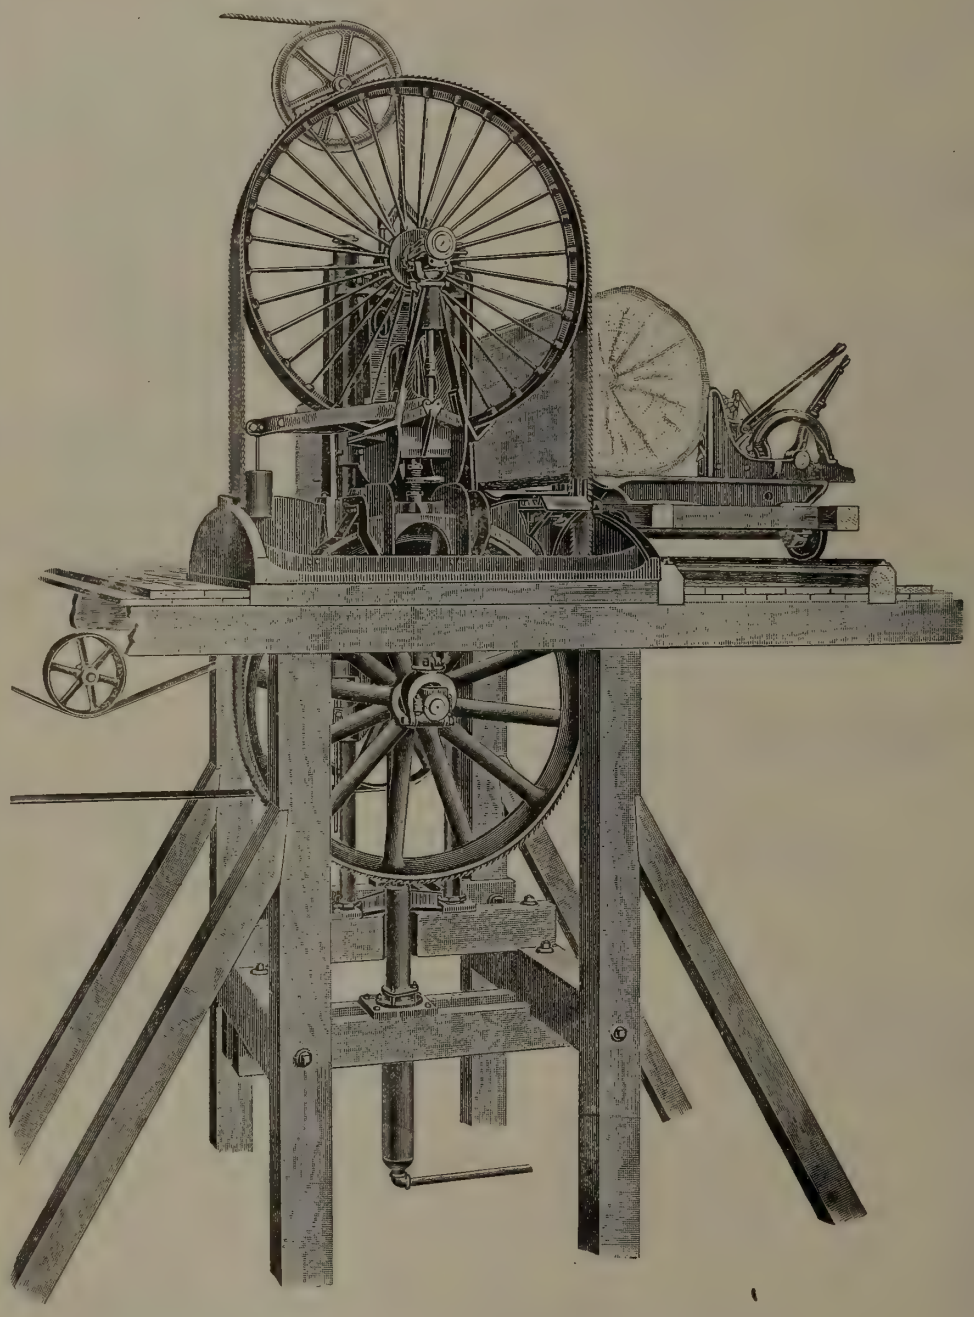
# HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

# Double Cutting Band Mill

PATENTED IN CANADA



THE New Allis Telescopic Band Mill has passed the experimental stage, and after running day and night for six months, is pronounced by competent saw mill men to be a perfect success as to the quality of its work and practicability as a machine. By the use of our **Double Cutting** Band Mill a gain of 50 per cent. in the amount of lumber cut is made by the addition of two men to the regular crew.

We are now building Telescopic Band Mills for

**J. D. Shier,** Bracebridge, Ont.;

**Rat Portage Lumber Co.,** Rat Portage, Ont.;

And the E. P Allis Company are building Telescopic Band Mills for the

**Bodcaw Lumber Co.** of Stamps, Ark.;

**Jeanerette Lumber and Shingle Co.,** Jeanerette, Louisianna.;

**Arizona Lumber and Timber Co.,** Flagstaff, Ariz.;

**R. J. & B. F. Camp,** of White Springs, Fla.

The advent of the New Allis Telescopic Band Mill, which is creating such a revolution in the manufacture of lumber, is the cause of considerable discussion among saw mill men as to the practicability of the band saw cutting on both edges and making lumber of a uniform thickness.

In regard to this, we wish to announce that six months of constant use have demonstrated the fact that the double toothed band saw will cut equally as well with one edge as with the other. It has also been proven that with the adjustments provided on the Telescopic Band Mill, lumber can be cut of a uniform thickness in both directions and taken care of without loss of time or at any disadvantage. It has also been shown that the double toothed band saw is a safer saw to operate than the single toothed saw, on account of its ability to cut its own clearance in either direction through slivers or other projections on the logs that catch the ordinary saw and back same off the wheels. It has also been demonstrated that advantages are to be gained by avoiding the use of an offset on the carriage.

The use of the **Double Toothed Band Saw** and all the advantages to be gained therefrom have been made possible by the invention of the **New Allis Telescopic Band Mil,** which is fully described and illustrated in our circular, which we will gladly mail on application.

☞ **Ordes for Band Mills and Saw Mill Machinery should be placed at once if early shipments are desired.**

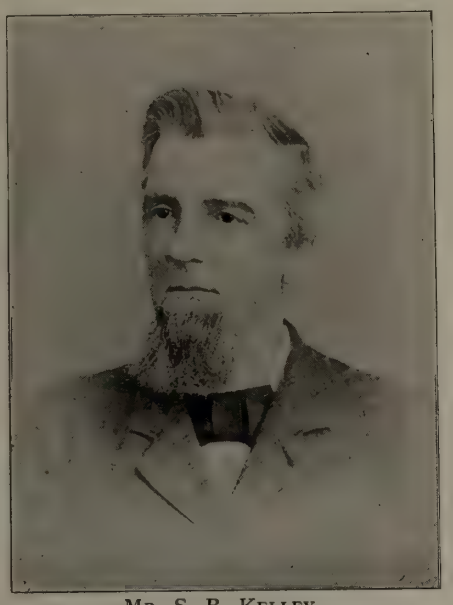
## AN ENTERPRISING LUMBERING FIRM.

IN the fall of 1878 the firm of Kelley Bros. commenced lumbering operations in the province of Nova Scotia, establishing themselves at River Hebert. The partners in the concern are Messrs. S. B. Kelley and C. L. Kelley, originally of Calais, Maine, the former being the resident manager, while the senior member, Mr. C. L. Kelley, still resides in Calais.

During the twenty years of their operations at River Hebert, the firm have encountered two serious losses. In the spring of 1881 a huge freshet carried away two driving dams, one hundred and fifty thousand feet of deals, one and one-half million feet of logs, and the saw mill, which had just been equipped with steam power, at a cost of $3,000. These were carried out into the Bay of Fundy, and became a total loss. This left the firm in a bad condition, there being on the stream one jam of logs of one million feet, and no way to get them out or manufacture them. The following summer Messrs. Kelley Bros. erected another mill, which they operated until August of 1892, when it was entirely destroyed by fire. In this instance, however, their season's logs had been manufactured into lumber. Not easily discouraged, the firm decided to again rebuild, and the result is the mill shown in the accompanying illustration. This mill is 70 x 90 feet, covered with sheet iron, and contains gang, gang edger, and lath machine. It is operated by two engines, 14 x 20 feet, fed by two tubular boilers. The annual output of lumber is about three million feet, the bulk of which is disposed of in the British market, being handled by St. John shippers. Boards, scantling, and lath are manufactured for the United States market. The timber in the woods is felled by a cross-cut saw, the firm claiming that a large saving is effected thereby. A portrait of the manager of the business, Mr. S. B. Kelley, is presented herewith.



MR. S. B. KELLEY.

### THE LUMBER SLUICE.

Persons manufacturing lumber at River Hebert have been somewhat handicapped in getting their lumber from the mills to the shipping point. Scows carrying thirty thousand feet were formerly used, but these did not prove entirely satisfactory. In the summer of 1897 the firm of Kelley Bros., in conjunction with Pugsley Bros., concluded to build a sluice from their mills to the loading ground, a distance of five miles. The sluice at the mill is built at an elevation of thirty feet from high water, which gives a fall of one and one-quarter inches to the hundred feet, which is sufficient to float the lumber. When the construction of the sluice was decided upon, a competent engineer was engaged to lay out the route, so as to have a true grade from beginning to end.

Properly speaking, there are two sluices, the width over all being thirty inches, with a board in the centre, the object being to keep the lumber of each firm separate, and also to utilize the full capacity of the water. The bottom is made of two inch spruce plank, planed on one side, and jointed and chamfered, so that as soon as the water was let in, the dirt and sawdust filled into the chamfer, making it perfectly tight. The sides are of pine boards, ten inches wide, and with a base board five inches wide, are nailed to the plant and the joint strengthened with a short piece of board on the outside, making all tight. There is a piece of 2 x 4, of the proper length, nailed across the bottom at every joint.

SAW MILL OF KELLEY BROS., AT RIVER HEBERT, N. S.

The bents are 3 x 6 with cap, all spiked solid. The sluice merely lays on the caps and is not spiked thereto. The water is fed to the sluice from a pond made by damming the brook, and in case of severe drought the water is elevated by a pump. The lumber is raised from mill to sluice by an endless chain, and is then fastened together with short chains and stout nails to prevent jamming in going around short curves where the sluice had to be made wider. The sluice has a capacity of carrying from one hundred to one hundred and twenty-five thousand feet of deals per day; it cost $1,000 per mile, and consumed 450,000 feet of lumber in its construction. This system of conveying lumber has given perfect satisfaction, and is regarded as an inexpensive method.

## TREES WHICH DRAW LIGHTNING.

ALEX. McADIE has asked the Weather Bureau to investigate the question why some kinds of trees are more frequently struck by lightning than others. Apart from the importance of this subject from other points of view, it demands attention primarily as a matter of saving human life. As Mr. McAdie shows, many people, particularly farmers and those who work in the fields exposed to thunder storms, will work until the storm is almost upon them and then run to the nearest tree for shelter.

If the tree is an oak, and the charged thunder-clouds are moving toward it with high electrical potential, the person or persons under the tree are in the line of strain and all unconsciously are contributing to the establishment of a path for the lightning discharge through themselves. On the other hand, if the tree selected for shelter happens to be a beech tree, there is some reason to believe that it will afford safety as well as protection, though the reason why is not at present made clear. It is known that the oak is relatively the most frequently and the beech the least frequently struck.

Based on the somewhat loose figures on the subject heretofore available, it is estimated in the matter of relative attraction of lightning, if the beech is represented by 1, the pine tree stands at 15; trees, collectively, rank about 40, and oaks 54. The trees struck are not necessarily the highest or most prominent. Oak trees have been struck twice in the same place on successive days. Trees have been struck before rain and split, and some have been struck during rain and only scorched.

It is suggested that the division of forestry and the division of vegetable pathology shall combine with the Weather Bureau in an exhaustive investigation of this subject, and those familiar with the forests in their respective neighborhoods will tender their experience as to the relative frequency of lightning strokes on different kinds of trees.—St. Louis Globe-Democrat.

## THE CANADIAN TIMBER SUPPLY AND THE BRITISH DEMAND.

ALTHOUGH for many years Canadian timber products have been exported to Great Britain quite extensively, it is acknowledged that much ignorance yet prevails in the mother country regarding the timber resources of Canada and her ability to supply wood goods in competition with other countries. One reason, and perhaps the chief one, why Canada is not better known in foreign countries, is that a considerable portion of her exports, particularly of lumber, have passed through United States houses, and our neighbors to the south have taken every precaution to conceal the identity of the goods.

Recently, Great Britain has shown a growing disposition to trade with her colonies in preference to other countries, and as a result enquiries are frequently made regarding Canadian timber products. This sentiment has been favorably received by Canadian lumbermen, who, wearied of the tariff changes and other interruptions incident to trading with the United States, are looking to other countries for a market for their output.

The CANADA LUMBERMAN has earnestly endeavored in the past to promote trade in timber products between this country and Great Britain, the largest consumer of wood goods in the world. Henceforth it is the intention to give still greater attention to the British market, by distributing copies of the journal to the timber importers and wood consumers in that country. In addition to our regular mailing list, five hundred copies of this issue will be sent into the British market, and will pass into the hands of persons directly interested in the importation of Canadian timber. Some of these may have but a meagre knowledge of the timber resources and manufacturing facilities of this country, and may be interested in the following brief particulars :

The bulk of the forests of North America are to be found in Canada, her timber area being estimated at 130 million acres. At one time the United States had vast forest areas, but these have become well nigh exhausted excepting in the Southern States, where there is to be found a considerable quantity of what is known as southern or pitch pine. Of late the United States government has adopted the policy of establishing forest reserves, but this precaution was not taken early enough, and in a few years that country will be dependent upon Canada for her timber supply.

It is estimated that the annual production of lumber in Canada is about two and one-half billion feet. Of this quantity, perhaps upwards of one billion feet is white pine and one-half billion spruce, the balance being made up of other woods, such as basswood, ash, maple, birch, elm, oak, beech, cedar, hemlock, Douglas fir, etc. To show the geographical position of these woods, we will commence with the most easterly province of Nova Scotia. Spruce is the chief timber there, although a considerable quantity of hardwood lumber is manufactured also. The total area of good timber lands is given as 2,600,000 acres, and there are a large number of saw mills, many of which manufacture for the British trade. Owing to the number of open ports, shipping can be carried on the year round from almost all parts of the province.

New Brunswick is also a spruce-producing province, and on a more extensive scale than Nova Scotia. In addition to spruce, there exists an abundance of cedar, birch, maple, beech, and hemlock, with some ash and poplar. Spruce and birch comprise the chief export to Great Britain, but more attention is being paid to the hardwoods, and a greater quantity will likely be manufactured in the future. There is probably over 10,000,000 acres of timber lands in the province, much of which is covered with the finest of spruce. There are numerous rivers and streams to facilitate the getting of logs to the mills, and also providing excellent sites for saw mills, pulp mills and wood-working factories.

Quebec must also be classed as a spruce province, with very little hardwood timber. The spruce found in the province, however, is of excellent quality, and practically inexhaustible, there being large tracts in the north yet untouched. White pine is also native to Quebec, being contiguous to the Ottawa river. The saw mills are equipped with modern machinery, and have an average capacity of 50,000 feet per day.

In the province of Ontario are found the white pine forests of the Dominion. Of a total area of timber lands of about 120,000 square miles, about 23,000 square miles are under lease by lumbermen. The Ottawa valley is the seat of the pine trade, there being manufactured there annually on an average 650,000,000 superficial feet. Extensive pine limits also exist in the Georgian Bay district, in the western part of the province, from which section the Michigan lumbermen have of late years derived their log supply. Red, or Norway pine, is also manufactured in Ontario. This lumber has, within the past two years, met with favor in the British market, and the quantity available has been unequal to the demand. From being almost a drug upon the market, it has become a readily marketable product, and no doubt a greater quantity will be manufactured in the future by the Canadian lumbermen, who realize the vast extent of the requirements of British consumers. Ontario is famous not only on account of its pine forests, but also because of large tracts of hardwood timber, including oak, ash, elm, maple, birch, basswood, beech and hickory. Some of these woods are already known in the British market, but it is only during late years that Canadian hardwoods have been exported to any extent. What has been done, however, is looked upon as but the beginning of the development of the hardwood industry. Lumbermen who have heretofore given no attention to the hardwood timber on their limits, confining their operations exclusively to pine, are becoming convinced of the wisdom of cutting the hardwoods also. With the expansion of the demand they hope to profit by this policy, while it is also desirable from a forestry standpoint to remove the hardwood trees in order that a regrowth of pine may be assured.

Nowhere in the world are more extensive or better equipped saw mills to be found than in Ontario. The machinery is modern, well designed, and in charge of skilled workmen, and the lumber manufactured is of the best quality.

The province of British Columbia has vast timber limits. Of an area of 382,000 square miles, it is estimated that 285,000 miles are timber lands. The Douglas fir is the chief commercial timber, it being found in great quantities and of exceedingly large dimensions. It has wonderful strength and elasticity, and is particularly adapted for ship-building purposes. Other woods of the province are red and yellow cedar, spruce, white pine, maple, and alder, and a number of others of minor importance.

To the lumber trade of Canada the present may be called a transition period. While in earlier years only lumber in rough form could be marketed in Great Britain, conditions have changed, and there is now a steady and increasing demand for the more finished product, such as doors, sashes, chair stock, box shooks, and many lines of wood-working material. To meet this demand some extensive factories have been established in Canada, and many saw mill owners are, at the present time, establishing wood-working plants with a view to exporting the output to the British and other foreign markets. The importer who prefers to trade with Canada will find it possible to obtain goods equal in quality to those produced in the United States, Norway, Sweden, Germany, or any other country. Inadequate shipping facilities have, in the past, operated against Canadian timber exporters, but this obstacle is being gradually overcome by the establishment of new steamship services.

Closely allied to the lumbering industry is the manufacture of pulp, in which Canada bids fair to become famous throughout the world. Possessing an almost inexhaustible supply of spruce, the best raw material yet discovered for making pulp, and with almost illimitable water powers, this country is certain to witness, in the near future, a wonderful expansion of the pulp industry. The large mills that have been established have successfully encountered competition, which fact has given an impetus to other projects of a like nature. Arrangements are about completed for the erection of several new mills in Quebec, New Brunswick and Nova Scotia, and ere long a much greater quantity of Canadian pulp will be purchased by British paper-makers.

## TRADE NOTES.

The Robb Engineering Company, of Amherst, N. S., have furnished a 100 h.p. engine and boiler and other machinery for a new saw mill being built at Springhill, N.B., by John Campbell, jr.

Mr. D. K. McLaren, of Montreal, anonnces that he has lately introduced an excellent method of stretching the leather used in the manufacture of his English oak-tanned leather belting, and is prepared to guarantee entire satisfaction to users. Mr. J. T. Craig, 69 Bay street, is in charge of the Toronto agency.

We learn that the protracted law cases which have been pursued in England by the Magnolia Anti-Friction Metal Company, Limited—the London branch of the Magnolia Metal Company, of New York—in defense of their rights to their celebrated brand, and their business, have been decided in their favor against John Sugden, W. E. Watson, A. B. Brown, the Atlas Bronze Company, Limited, the Atlas Metal Company, Limited, and others, who were enjoined respecting patents, trade-marks, and from engaging in any anti-friction metal business, with costs and damages. The text of the decision, as appears in the English papers at hand, is very severe and sweeping. We congratulate the Magnolia Metal Company at this result. The cases have been prosecuted with great vigor, and no doubt large expense, but it is of value to Americans registering under and appealing to English laws to know that they do and will protect them when properly appealed to.

The McDougall Lumber Company, of which J. M. Gill, of Orillia, is a member, will build a saw mill and sash and door factory on the old Beatty site at Parry Sound, Ont.

## THE LATE WILLIAM BEATTY.

WE publish herewith a portrait of the late William Beatty, of Parry Sound, Ont., to whose death reference was made in our January issue, and are pleased to give some additional particulars bearing upon his connection with the lumber business. In the year 1863, James and William Beatty, of Thorold, purchased from J. & W. Gibson, of Willowdale, their saw mill and timber limits, and immediately commenced active operations. In 1872 they sold their limits and mill to H. B. Rathbun & Son, who in turn disposed of them to A. G. P. Dodge & Co., who organized the Parry Sound Lumber Company. At this time James Beatty withdrew from the firm, and William Beatty continued as the sole partner. In 1877 he erected the Seguin mill, having a capacity of about six million feet per season. This mill was subsequently sold to J. C. Miller, and in late years Mr. Beatty manufactured but a small quantity of lumber. At the time of his death he owned about 17,000 acres of timber lands in the immediate vicinity of the town of Parry Sound. We are advised by Mr. J. Farrer that his business as lumberman and general merchant at that place is being continued under the old name.

## THE NEW STEAMSHIP SERVICE.

THE establishment of the new Canadian steamship line from Pasbebiac, Que., to Milford Haven, England, is likely to be of much benefit to the lumbermen of Quebec as a means of shipping their lumber in the winter season. The Gaspesia, from Paspebiac, which sailed on her second voyage on the 4th of February, carried a trial shipment of about 45 car loads of spruce deals, shipped by Messrs. Price Bros. Despite the lack of wharf accommodation, the lumber was handled quickly, almost as well as it could be in summer with the same facilities. Besides the Price Bros.' shipment, the Rathbun Company, of Deseronto, shipped two car loads of doors, and J. & P. Nadeau, of Grand Cascapedia, Que., a quantity of kiln-dried birch flooring.

The Gaspesia also loaded a large amount of other freight, and although the weather from the time of her entry into the bay till her departure was very severe, little difficulty was experienced in loading. Some floating ice was in the bay, but it was not sufficient to make the vessel slacken speed. Upon her return voyage she was less fortunate, becoming ice-bound, but coming out uninjured.

With proper wharf accommodation at Paspebiac, which the company will build at once, means will be afforded of shipping lumber in small or large lots the year round. We understand that the freight rates are very reasonable.

The opening up of this new line will develop the hardwood and pulp business on the Baie de Chaleurs and in the counties of Bonaventure to a great extent. By it another link is added to our steadily increasing trade with Great Britain, and the more of these the better. The lumber interests cannot look too favorably on the development and success of this new line.

Charles Hannan, of Essex, Ont., is looking for a site for a factory to manufacture butter dishes, using hard maple and black birch as raw material.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinion of correspondents.

## THE BRITISH COLUMBIA TIMBER REGULATIONS.

The statement having been published that the government contemplated making some changes in the method of disposing of timber in British Columbia, enquiries were made by the CANADA LUMBERMAN from a few of the lumbermen. The answers received are as follows :

NANAIMO, B. C., Jan. 18th, 1899.

DEAR SIR,—In reply to your card of the 5th inst., re proposed changes in the B. C. timber regulations, I believe there are no immediate changes contemplated by the Government. I do not know of any changes that could be made that would be more advantageous to the province than the existing regulations. The land is leased to the mill owner at an annual rental of ten cents per acre on a term of from ten to twenty years, and the mill owner pays a royalty of fifty cents per thousand feet on each thousand cut for ocal consumption, and twenty-five cents per thousand feet on all lumber exported to foreign markets. This royalty is paid as the lumber is cut on the claim. The amount of timber land is limited to four hundred acres for each thousand feet of lumber a mill can cut in twelve hours. The object is to prevent large companies from locking up large bodies of timber land at one time.

Faithfully yours,
A. HASLAM.

THE LATE WILLIAM BEATTY.

KASLO, B. C., Jan. 20th, 1899.

GENTLEMEN,—I am unable to give you the information re timber regulations, as I am not aware that anything has yet been published as to the nature of the changes proposed. The government for the last three months has refused to entertain any applications for timber rights. From this fact we infer that some regulations less advantageous to lumbermen than the present ones are contemplated.

We now pay a royalty of 50 cents per 1,000 feet upon all logs cut upon any land held by the government or granted subsequent to 1887. We pay also 10 cents per acre per annum upon timber land held under lease, besides cost of survey, and such areas are only to be obtained now by tender of a cash bonus in a public competition. Licenses may also be obtained by loggers for areas not exceeding 1,000 acres for the sum of $50, good for one year.

A great deal of the timber lands in the interior is now held by railway companies, to whom it has been granted by way of subsidy. Destructive fires follow the trail of the prospector everywhere in the mountain regions, and the railways will therefore be compelled to market their stumpage with all practicable speed. In the face of their competition, it is difficult to see how the government can increase appreciably the levies they are now exacting.

On Kootenay Lake, we fortunately have two strings to our bow, as the Kootenay river comes to us through Idaho and Montana, and there is a considerable amount of timber tributary to it.

Yours faithfully,
G. O. BUCHANAN.

## FROM AN EASTERN MANUFACTURER.

Editor CANADA LUMBERMAN :

DEAR SIR,—We are in receipt of your paper for the last three months, and are pleased to note the progress you are making.

Markets seem to have improved all round this winter, and we have had inquiries for much more than we could supply, but have only contracted for a small portion of next year's product, and that has yielded us ten per cent. more than last season. While prices seem tending upward, we are in no hurry to take the risk of advanced vessel freights and extra cost of winter work from lack of snow in our forests.

In your last we again meet J. B. Snowball's report of the Nova Scotia export of lumber, with its usual omissions. While the south shore of Nova Scotia sent their stocks to other markets, his report of the Atlantic deal trade was not very far astray, but the export of 1897 and 1898 from St. Margaret's Bay around to Annapolis has always been a respectable proportion of the Nova Scotia export, and has never been reported in his list. Gold River, Lahave, Port Medway, Liverpool, Jordan, Tusket, Yarmouth, Digby and Annapolis, we think, sent deals to England—or rather Great Britain and the continent—in 1897 and 1898 ; and anyone PRETENDING to report the WHOLE province should have secured returns from the Customs before falsely sending a part and calling it the full export. Such a large omission only excites suspicion as to the value of the rest of the figures.

This section of the country sympathizes with your version of the lumber tariff question, and unless we get some substantial advantage, we can allow the United States to keep up their protection wall as high as they like. As we met Maine products in England and Scotland last season, it proves their home market is not very profitable to us ; and, like other American products, that prices are regulated across the Atlantic. Since we buy two dollars from them for every one dollar they take from us, we prove ourselves the best customers they have, but if this trading is not worth encouraging we can go elsewhere with our products, and perhaps exchange them to quite as good profit to ourselves.

Yours truly,
"MARITIME MANUFACTURER."

William A. Kribs, M.P.P., will probably build a box and wood-working factory at Hespeler, Ont.

The lumber firm of Kernohan, Webster & Ferguson, London, Ont., has been succeeded by Kernohan & Ferguson.

The Columbia Lumber Co., of Golden, B. C., have erected a new saw mill about two miles east of Notch Hill.

Kerr & Harcourt, spool and bobbin manufacturers, of Parry Sound, Ont., have built another dry kiln, to enable them to keep up with the increasing orders.

John Carew, of Lindsay, Ont., has purchased a new engine for his mill. It is his intention to rearrange the machinery in the mill, and to add several labor-saving devices. Mr. Carew has made arrangements for a much larger quantity of logs than was taken out last year, and will also cut between 40,000 and 50,000 ties for McCormick & McLeod, of Bracebridge.

# THE LUMBERMEN'S ASSOCIATION OF ONTARIO.

ANNUAL MEETING IN TORONTO.—RESOLUTION PASSED IN FAVOR OF AN IMPORT DUTY ON UNITED STATES LUMBER.—OFFICERS ELECTED.

THE annual meeting of the Lumbermen's Association of Ontario took place in the Board of Trade building, Toronto, on Friday, February 17th. Among the members present were the following :

John Bertram, Collins Inlet Lumber Company, president of the association ; James Scott, Georgian Bay Lumber Company, vice-president ; W. B. Tindall, secretary ; John Waldie, Victoria Harbor Lumber Company, Toronto ; J. T. Conlon, Thorold ; J. B. Miller, Parry Sound Lumber Company, Toronto ; D. C. Cameron, Rat Portage Lumber Company ; C. Beck, Penetanguishene ; Robert Watt, Wiarton ; R. Laidlaw, Toronto ; R. A. Mathers, Rat Portage ; A. H. Campbell, jr., Muskoka Mill & Lumber Company, Toronto; George Chew, Midland; J. E. Murphy, Hepworth Station; C. A. McCool, Geneva Lake; W. Cargill, Cargill ; J. P. Newman, Wiarton ; William Laking, Hamilton ; George Thompson, Goderich Lumber Company, Goderich ; and F. Potter, of Saginaw, representing Michigan interests.

The chair was occupied by the president, Mr. Bertram, who, after the financial report and the minutes of the previous meetings had been confirmed, delivered the following address, reviewing the work done by the association during the past year :

PRESIDENT'S ADDRESS.

The year 1898 was a very eventful one in many ways to those engaged in the lumber business. It was the first year that there was a real change for the better since the depression commenced in 1893, and I congratulate the members upon the improved prospects. The beginning of 1898 marked a change in the policy of the Ontario Government with regard to the cutting of pine on Crown lands, enacting what has been called the manufacturing condition, and now all pine cut on Crown lands must be sawn or otherwise manufactured in Canada. This did did not take effect as to logs cut under existing licenses, and before another season's work could commence in the bush.

The Joint High Commissioners met at Quebec for the purpose of trying to adjust all disputes and differences of opinion existing between this country and the United States. The lumber and log question was bound to form a very prominent feature in this discussion, and as was fitting, the association met and formulated their opinions and views, which were duly forwarded to Lord Herschell and each of the Canadian Commissioners. No member of the association appeared personally before the commission, no lobby was formed, nor any attempt made to influence the commissioners on personal grounds. In view of the near closing of the conference at Washington, it is a question for the meeting to deal with whether any further action shall be taken to reaffirm their opinions, which I am safe in saying have only been strengthened by time. Last spring a deputation waited on the Premier at Ottawa with the request that a duty of $2 per 1,000 feet be placed on lumber, 30 cents on shingles and 25 cents on lath. The views of the association have so far been accepted by the Government, and it is for the meeting to say whether any further action should be taken.

The Reciprocity Committee of the association met a delegate from the Merchants Association of New York, who expected to find a very strong feeling for reciprocity in this country, and desired the help of the association in educating the people of the United States to a more reasonable attitude on reciprocal relations. It was pointed out to him that it was really their own business, and that the association did not feel justified in interfering one way or the other. It was further pointed out that the feeling for reciprocity in Canada was weakening even among the lumbermen.

The Committee of Management also conferred with the officials of the Grand Trunk and Canadian Pacific Railways, pointing out the desirability and necessity of having local rates of freight on pine and hardwood. The main difference in rates is on hardwood to Montreal, which are 2½ cents per 100 pounds higher than pine. The export of lumber by way of Montreal is an increasing trade, and exporters in Montreal are exceedingly anxious to obtain as much lumber as possible to load with their grain vessels. The transportation question will be greatly changed when the deepening of the St. Lawrence canals is finished, and the Georgian Bay mills will then be in a position to ship cheaply by water to either Montreal or Quebec.

The president also stated that the Committee of Management had taken up with the Customs authorities at Ottawa the question of the injustice done to Canadian lumbermen by permitting British and American tugs towing logs from Canada to American mills to bring in large loads of coal in bond and dump it on the Canadian shore, and then come back and get this coal again, no duty being charged, whereas the Canadian tugs, towing to Canadian mills, had to pay a duty of 60 cents a ton on coal brought in from the United States. A reply had been received, he said, from the Department stating that no change in the law could be made. The matter had been fully considered some time ago, and new regulations were issued, which were as follows :

To Collector of Customs,

Port of.....

SPECIAL FRONTIER PORT REGULATIONS FOR DELIVERY OF COAL AS SHIPS' STORES ON INLAND WATERS.

.....

Under the provisions of Section 105 of the Customs Act (as amended) coal sufficient for fifteen days' use (or less) on board steamers of 50 tons and upwards, bound for a foreign port or not, may be delivered ex-warehouse, free of duty, at one time, at the port above mentioned, if the steamer be engaged in trade on inland waters along the international boundry between the United States and Canada, and if traversing foreign waters during part of the proposed voyage on which the coal shall be used.

Provided, that the master or owner of the steamer, or his agent, first makes affidavit to the satisfaction of the Customs officer that the coal is necessary and intended for the purpose aforesaid :

And provided further, that this privilege shall be limited to coal for delivery at such ports on inland waters along the international boundary above Montreal as shall be designated by the Minister of Customs ; and if coal thus delivered as ship's stores is re-landed, sold or disposed of in Canada, the coal and the vessels for and from which it is delivered shall be subject to seizure and forfeiture under the Customs laws, and further delivery of coal as ship's stores to the steamer, so offending may be withheld.

Upon motion of Mr. Scott, seconded by Mr. Conlin, the address of the president and the accompanying documents were received and adopted.

THE EXPORT LUMBER TRADE FROM MONTREAL.

The president read an article from the Montreal Herald bearing upon the relation of the lumber business to the shipping trade of Montreal, from which the following is extracted :

"Upon the increase of lumber shipments, probably more than upon any other factor in the situation, has depended and will depend the increase of shipping at Montreal, and therefore the increase of grain shipments through this port. The noteworthy increase in tonnage, and, what is of even more importance, the calling of the latest class of freight ships to Montreal in the last three or four years, has been made possible principally by the great increase in the export of lumber to Europe, principally to Great Britain. Shipments of lumber in 1895 were 175,372,976 feet. In 1898 they had nearly doubled, increasing to 335,429,290 feet. In the same time the tonnage at Montreal increased from 1,069,386 to 1,584,072, an increase in three years greater than had taken place in the preceeding fifteen years. This increase in the lumber shipments goes far to explain the great corresponding increase in grain shipments from the port, an increase which was indeed even more extraordinary, the total of 15,771,364 bushels in 1895 being trebled in 1898, when the total was 46,135,205 bushels.

"The explanation of this apparent interdependence is simple enough. Every ship must have both "heavy" and "light" cargoes. No ship, or practically none of the modern Atlantic freighters, will take a cargo of grain or "heavy" freight only. Nor will any ship willingly take a full load of lumber or other "light" freight. A ton of grain occupies about forty cubic feet, and the grain cargo stiffens the sides of the ship below water, and helps materially to sink the ship to the safe water line. A ton of lumber occupies about eighty cubic feet of a vessel's space. The inter-relation of the the two classes of cargo will perhaps be adequately indicated by the details of the cargoes of four ships of a leading Montreal line in the month of August, 1898, which shows that in a total of 22,434 tons of freight carried, there were included 7,210 tons of grain, 8,219 tons of lumber, and 617 tons of cheese. The grain at $2.40 a ton would yield the ship-owners $17,304. The lumber at $3.84 a ton would yield $31,561, and the cheese at $4.80 a ton would yield $2,961. The importance of the lumber cargo is at once evident. On the last two boats of the season, when the freight on grain had risen five shillings a ton, the freight on lumber had risen on an average only one shilling a ton. In a total of 9,926 tons for the two ships there were 4,650 tons of grain, worth to the ship-owners $16,740, and 2,569 tons of lumber, worth to the ship-owners $10,482. There were also 351 tons of cheese, worth to the ship-owners $2,106.

"Apparently the ability of our expensive system of canals to do enough business to repay the country for its vast outlay is to be greatly influenced for some time to come by the ability of Canadian lumbermen to increase the output ot their products through Montreal to Europe. Will the Parry Sound Railway and the Grand Trunk from Midland be able to add the Georgian Bay lumber district to the Ottawa district in the development of this business?"

LETTER FROM MR. WALDIE.

In respect to the above article, Mr. Waldie sent the following letter to the Montreal Herald:

SIR,—I was well pleased indeed at reading an article in your issue of the 4th instant on the bearing of the lumber trade on the harbour situation at Montreal. You are right in saying that lumber must form a portion of the exports of Montreal if the business of the port is to be conducted on a profitable basis.

I am not certain that the deepening of the St. Lawrence canals will materially assist in increasing the quantity of lumber going from Western Ontario to Montreal, but it will increase your receipts of all kinds of grain. Lumber being such a bulky article, and covering so much space, it cannot, when moved in vessel loads, be yarded in Montreal so as to be available for steamers as they require it for mixed cargoes, without heavy terminal expense.

The transportation of lumber from western districts must continue to be largely by rail, while from the Ottawa district it will continue to go in canal boats which carry cheap, and can remain in port, if need be, without any very great expense, to suit the convenience of the steamer.

Taking the whole cut of sawn lumber for the year 1898, the output of the mills of Ottawa and Western Ontario will aggregate 1,000,000,000 feet b.m. Of this six-tenths, or 600,000,000 feet, was the cut of the Ottawa mills, including Ottawa river. Of this quantity, one-half, say 300,000,000 feet, went to Montreal for export ; 100,000,000 feet would represent the local trade of the Montreal district, and possibly shipments for export elsewhere than Montreal ; 50,000,000 feet would be taken by the Ontario trade, including the consumption of Ottawa city, leaving ouly 150,000,000 feet for the American trade out of 600,000,000 feet, and consular returns show less.

This shows the lessened quantity that is finding its way to the American market, and is fully borne out by the

showing of the American consular reports from Ottawa district for the year ending December 31st, 1898 :

| | |
|---|---|
| Lath | $ 21,789 |
| Lumber | 1,379,725 |
| Logs | 75 |
| Match blocks | 32,947 |
| Pickets | 18,623 |
| Posts and poles | 1,057 |
| Pulp sulphite | 3,318 |
| Pulp wood | 5,500 |
| Railroad ties | 222 |
| Wood board | 1,701 |
| Timber | 4,772 |
| Shingles | 28,434 |
| Total | $1,508,981 |

Now, when we come to deal with the remaining 400,000,000 feet which is manufactured west of Ottawa city (including the mills at Rat Portage), we find that it is distributed in about the following proportions, viz.:—

The local Ontario trade taking fully one-half, 200,000,000 feet.

Manitoba trade, about 85,000,000 feet.

The American trade about 80,000,000 feet.

While Monnreal and eastern points would take the remaining 35,000,000 feet. Thus we distribute the whole product of the mills cutting one billion feet in the Ottawa river and west.

When you carefully examine these figures you can understand how the Western Ontario men are all indifferent to the American market, which takes little over 250,000,000 feet, and the quantity of American lumber thrown back into Manitoba and Ontario approximates nearly 50,000,000 feet, thus reducing the net consumption of Canadian lumber by the United States to about 200,000,000 feet, and this would be still further reduced if the quantities which go to Portland, Boston and New York for export were deducted.

What we require is cheaper rail transportation. Rail charges on lumber from Western Ontario to Montreal are quite too high, but the Ottawa Valley having the advantage of water transportation, secure a fixed rate of equal to $1 per thousand feet from the mill to the vessel's side, while the rail rate from the Georgian Bay to the vessel's side in Montreal is equivalent to $3 per thousand feet.

What is devoutly desired by every Canadian is that a larger portion than ever before of tbe wood product of Canada should find market in Europe and, as far as possible, be shipped through Montreal.

I am, dear sir,

Yours truly,

JOHN WALDIE.

P.S.—The quantity of logs towed from Georgian Bay to Michigan mills was as follows :

In 1897.....219,026,825 ft. B.M.
In 1898.....238,843,624 ft. B.M.

which is greater than the net shipment of lumber to the United States, as shown above.

Referring to the figures given, Mr. Waldie said that he was surprised to find that such a small quantity of lumber was marketed in the United States. He pointed out that while the American market was falling off, the British market was rapidly becoming of greater importance, and presented some calculations of the export of lumber to the United States from the consular district of Ottawa, as follows: In 1896, under free lumber, the value was $1,767,278, which, on a basis of $10.50 per thousand, represented 168⅓ million feet; in 1897, with free lumber for seven months and a $2 duty for five months, the value was $2,357,120, representing 224 6-10 million feet; in 1898, with a two dollar duty, the value was $1,379,120, representing 131 3-10 million feet.

Mr. Scott did not think the outlook was such as to cause the Canadian lumbermen any uneasiness. The English market was practically unlimited, and in late years had taken all classes of lumber and dimension stuff, while previously only deals could be marketed there. That market was also free from the annoyance of customs duties, and the exporter could trade on favorable terms. So far as he was concerned, he would be just as well pleased if the Commissioners at Washington were to return without accomplishing anything in respect to the lumber duties. He was in favor of placing an import duty on the United States lumber coming into Canada, as it was manifestly unfair that the United States should have free access to the Canadian market while Canada was debarred from theirs.

Mr. Beck agreed with the remarks of the previous speaker. The United States, he said, must have our white pine, and would pay the two dollar duty. The southern pine would, of course, regulate prices to some extent, but it was only adapted for certain purposes.

The president of the Rat Portage Lumber Company, Mr. D. C. Cameron, was next heard. He was much impressed, he said, by the figures submitted by Mr. Waldie in his letter, as he had been under the impression that we were sending lumber to the United States by hundreds of million feet. Manitoba was each year importing a greater quantity of lumber from Minnesota. In 1894 the importation was 4,000,000 feet; in 1895, 8,000,000 feet; in 1896, 12,000,000 feet; in 1897, 17,000,000 feet; and in 1898, 38,000,000 feet. In the years 1892 and 1893 there were manufactured about 60,000,000 feet west of Lake Superior for Manitoba and the Northwest. Last year, one of the best yet experienced, the quantity manufactured was under 50,000,000 feet, while nearly 40,000,000 feet were imported from the United States. He thought that the retail lumbermen in Manitoba would offer little opposition to a duty on United States lumber. Regarding the argument that the placing of a duty on American lumber might create a monopoly, he said that there was sufficient competition in the lumber business to prevent any body of men from getting fancy prices for their lumber.

Mr. Mathers, of Rat Portage, endorsed the remarks of Mr. Cameron.

As a representative of the hardwood industry, Mr. Newman took occasion to refer to the present discrimination in freight rates against hardwood lumber. Personally, he was not affected to the same extent as some others, as he could get his lumber into Detroit by boat on a $1.50 rate. Neither had he been affected by the lumber duty, as prices for hardwoods were higher to-day than when there was free lumber; but, to show the injustice of the present rate, he cited an instance when he sold a car of maple lumber at $4 per thousand feet at the mill. The buyer had to pay a higher rate on this than on a car load of pine valued at $25 per thousand.

Mr. Scott then moved, seconded by Mr. Newman, that the association reiterate its opinion, formerly expressed, that in the absence of reciprocity in lumber between the United States and this country, the government should impose an import duty on lumber corresponding to that of the United States, and thereby remove an injustice that exists to Canada and its lumbermen, and that the Committee of Management be instructed to press this view on the government at Ottawa in the event of the failure of the reciprocity negotiations at Washington. Carried.

### ELECTION OF OFFICERS.

The only change resulting from the election of officers was the substitution of the name of Mr. J. E. Murphy as second vice-president for that of Mr. W. C. Edwards, M.P. The officers for the year, therefore, are as follows: President, John Bertram, Toronto; 1st vice-president, James Scott, Toronto; 2nd vice-president, J. E. Murphy, Hepworth; secretary-treasurer, W. B. Tindall, Toronto. Board of Management (including Messrs. Bertram, Scott and Murphy): John Waldie, Toronto; N. Dyment, Barrie; W. A. Charlton, Lynedoch; T. Conlon, Thorold; J. B. Miller, Toronto; R. Cook, South River; C. Beck, Penetanguishene.

Upon the invitation of the president, Mr. Potter, representing Canadian-Michigan interests, gave his views regarding the lumber duties and the embargo on the exportation of pine logs. He did not think there was any justice in placing restrictions upon the timber after it had been purchased, and compared the action to that of selling a man a horse and requiring him to pasture it on the vendor's farm until it died, or to sell corn and insist on its being ground in the vendor's mill. There was one thing to be done, and that was for the Michigan lumbermen to quit the business. Touching upon the import duty on United States lumber, he thought it was well understood that the consumer paid the tax, and it was safe to say that the Manitoba consumer would pay $1.90 out of the $2 duty which it was proposed to put on.

Mr. Waldie replied to Mr. Potter. He said that Canadian lumbermen were in sympathy with Michigan lumbermen until Congress placed on the statute book the clause providing that in case any country should place an export duty on logs the amount of that duty should be added to the lumber duty. Several members entered into this discussion, each upholding the Ontario government in its present action.

Mr. Bertram spoke briefly on the forestry question. There was much timber other than pine that was practically unmarketable, and he looked forward to the time when we could cut spruce, poplar, balsam, etc., and eliminate them from the forest. We would then have a good growth of pine for generations to come. Pine seeds, he said, would carry two miles, and the only thing that kept them from growing was that the ground was already covered. His advice was that where you have a mixed growth, leave the young trees, and if you have to cut all, leave some trees to seed the land. He advocated the employment of fire rangers.

Mr. Cargill introduced himself by saying that he was a small lumbermen, cutting about 4,000,000 feet per year, and preferring to restrict his production and make a fair profit on what he manufactured. He sympathized with the Michigan lumbermen, but believed that if they left their timber standing on the Georgian Bay, they would be better off in twenty years than if they had manufactured it into lumber.

Mr. Scott, who visited France, Germany and Austria last year, volunteered some information regarding tree-planting by artificial means. In Austria a person cutting timber is obliged to plant as much as he cuts down. He saw thousands of acres re-forested with trees from six to eight inches high to full growth. They were planted in fields with great regularity. The authorities demanded that only one kind of timber be planted together. Persons wishing to cut timber had first to get permission from the government and had to cut the trees under government supervision. He did not think, however, that this system of forestry was practical in Canada.

Mr. Murphy spoke in the interest of the hardwood trade. He thought that in addition to better freight rates the lumbermen were also entitled to more liberal travelling rates. The best they could now obtain was 2½ cents per mile, and to get this it was necessary to become a member of the Commercial Travellers' Association.

Mr. Bertram replied that the Association did not intend to give up the fight, and that every effort would be made to secure from the railway companies some redress for the hardwood trade.

After tendering a vote of thanks to the officers for their services during the past year, the meeting adjourned.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## CANADIAN LUMBER AND THE UNITED STATES MARKET.

The Commissioners at Washington have parted without accomplishing anything in the nature of a treaty. They are to meet again, it is true, in August next, but little significance is attached to this. We are not certain that there is any cause for regret at this fruitless ending of the negotiations. While a treaty satisfactory to both countries, if such were possible, is to be desired, Canada is not prepared to give to the United States more than a fair equivalent for what she receives.

No branch of commerce was likely to be more affected by the conditions of a treaty than the lumber trade, and yet it is remarkable how unconcerned are the Canadian lumbermen at the outcome of the negotiations. The reason for this is the bright outlook for Canadian lumber. Not for many years have stocks been reduced to such a low basis, and the number of enquiries received gives promise of a prosperous season.

Reciprocity in timber products was the motto adopted by the lumbermen of Canada. To this they have firmly adhered, and in the absence of such an arrangement, have secured the prohibition of the export of saw-logs from Ontario. Now the Michigan lumbermen have become indignant that no treaty was consummated by means of which they might secure timber for their saw mills. Mills, box factories, sash and door and other wood-working factories in Michigan will be compelled to close down for lack of raw material. While the United States is thus affected, Canada is comparatively indifferent.

Mr. John Waldie has compiled some interesting figures showing the exports of lumber from Ontario to the United States. Last year the total export was only about 250,000,000 feet, while over 50,000,000 feet were imported into Canada from the United States. The quantity of logs rafted from the Georgian Bay to Michigan mills in 1898 was 238,000,000 feet, about equal to the lumber exported. It will thus be seen that the United States market is of less importance to the Canadian manufacturer of lumber than is generally supposed.

In the absence of reciprocity, the Ontario Lumbermen's Association has reiterated its views in favor of an import duty on United States lumber. The Dominion Government will again be strongly memorialized to impose the duty. That the request will be granted is reasonably certain; but in the meantime lumbermen in all parts of the Dominion should give every assistance to the movement. As the home market extends, more lumber is being imported from the United States each year, to the displacement of the Canadian product. Take the statistics of Manitoba. In 1894 only 4,000,000 feet were imported, while last year the quantity is given as 38,000,000 feet. In addition, large quantities of Puget Sound shingles are imported into Manitoba and the Northwest, particularly at points reached only by the Northern Pacific Railroad. United States lumbermen thus have two markets, while the Canadians are compelled to divide their home market with their neighbors to the south. Surely no government will allow this anomalous condition to continue.

The Dominion Parliament will convene on March 15th, and one of the first questions to receive attention should be the enactment of a law placing an import duty on United States lumber. In view of the experience of the past six months, such a measure would doubtless be heartily supported by a majority of the members of both political parties.

## THE VALUE OF ASSOCIATED EFFORT.

The trade in Ontario have reason to be grateful for peculiar conditions which led to the resuscitation of the Lumbermen's Association of Ontario, the usefulness of which is sufficiently manifest. Its revival has exemplified the fact that there is at all times ample work for an association representing every branch of the industry. The meeting held in Toronto last month, of which a report appears elsewhere, was not regarded as likely to be an important one, inasmuch as it was expected that any action regarding the lumber trade relations with the United States would be a repetition, to some extent, of that taken at previous meetings. In consequence the attendance was not as large as could have been desired, yet the discussion on matters bearing directly upon the lumber trade was of such a nature as to be of interest to every lumberman in the province, and was deserving of a better audience. The influence of the Ontario Lumbermen's Association during the past year can scarcely be over-estimated; it has accomplished more than appears on the surface, and well merits the support and co-operation of the trade in general. Now that its usefulness has become so apparent, it should continue to grow in strength.

While due support has been accorded the association by each member, much of its success during the past year was due to the enthusiasm and untiring efforts of the president, Mr. John Bertram. At a time when international and parliamentary questions were involved, when special knowledge of the lumber situation was required, when the exercise of sound judgment was called for, it was fortunate that the chief executive office was held by one equal to the occasion. The re-election of Mr. Bertram is an indication that his ability is appreciated at its true value.

The appointment of Mr. J. E. Murphy as second vice-president of the association is particularly appropriate. Mr. Murphy stands as a representative of the hardwood trade, a branch of the lumbering industry which is not without its grievances. As one of the three executive officers of the association, Mr. Murphy will be in a position to bring greater influence to bear to secure the removal of the disabilities which now attend the manufacture of hardwood lumber. The question of current interest is the equalization of the freight rates, to which reference has previously been made in this journal. The representations made to the railway authorities by the association and by hardwood lumbermen have not yet borne fruit, but it is thought that ultimately the rate on hardwoods will be reduced to an equality with those on pine. A striking illustration of the injustice of the present rates was related by Mr. Newman, who pointed out that on a car load of maple which he sold at four dollars per thousand at his mill, the buyer had to pay a higher freight rate than if the car had been loaded with pine valued at twenty-five dollars per thousand.

The argument which would seem to appeal most forcibly to the railway companies is that relating to the utilization of the cull lumber and waste material. The railways are surely interested in securing additional business—likewise in developing the country. Under present arrangements much hardwood timber finds its way to the wood-pile and the railways receive nothing from it in the way of freight. If this class of stock were carried for a moderate charge, it would be taken to some central point and manufactured into a more finished product. Much of this finished product would be exported to foreign countries, and a second freight rate would be paid—probably to the railways—to the ocean port. It is said that the railway companies have not advanced one good reason why the rate on hardwoods should be higher than on pine, the contention that the former were more valuable having been shown to be erroneous. Hardwood lumber manufacturers, one and all, are interested in the movement to secure a reduction in freights; some have become members of the Lumbermen's Association, but many have preferred to stand aside and allow a few to fight the battle. If success is attained, all will share the benefit. Therefore everyone should lend a helping hand and strengthen the association by becoming members.

THE LUMBERMAN is issued fifty-two times a year for $1.00. Can you afford to do without it?

## CONVENTION OF WESTERN RETAIL LUMBERMEN.

The eighth annual convention of the Western Retail Lumbermen's Association was held in Winnipeg on February 8th, at which there was a large and representative attendance of both active and honorary members. The president, Mr. James B. Mathers, of Glenboro, was absent on a trip to British Columbia, therefore the chair was taken by the vice-president, Mr. Henry Byrnes, of Winnipeg. After the reading and adoption of the minutes of the last meeting, the president's address was read, as follows :

To the Members of the Western Retail Lumbermen's Association :

Gentlemen :—It affords me much pleasuse to welcome so many members to this our eighth annual meeting. I am pleased to congratulate you upon the successful and prosperous year just closed in all branches of business, and specially in the lumher trade. Our province and adjoining territory has been blessed with a bountiful harvest, which has enabled the public in general to settle their liabilities as promptly as usual, thus placing trade on a firm and substantial basis. There appears to be a favorable prospect for a good immigration to our land next season, which will certainly have a beneficial influence on the lumber trade.

Your directors, as requested at the last annual meeting, looked into the matter of fire insurance, also a telegraphic code. Your secretary communicated with the secretary of the Northwestern Lumbermen's Association of Minneapolis, and from information received your directors deemed it not advisable to attempt forming a fire insurance company at the present time, as our membership is not large enough to ensure its success, and considerable expense would be incurred in procuring a charter, etc.

Two telegraphic codes were purchased, and after looking into the matter we came to the conclusion that they would be seldom used,and would, in all probability, lead to confusion and mistakes, as they are complicated, there being so many different grades, sizes and length of lumber, and few manufacturers use the same terms.

We wish to express our thanks to the Rat Portage Lumber Co. and other honorary members who so kindly entertained us last summer, by a lumber excursion through the picturesque Lake of the Woods and up Rainy river to Fort Francis, which was one of the most enjoyable excursions on record, and was duly appreciated by all who were able to attend. Our thanks are also due the officials of the Canadian Pacific Railway Company, who so generously granted free transportation to all members attending.

We regret very much the removal, by death, of three of our esteemed brother members, Mr. Gibbard, of Wapella, Mr. Wyatt, of Virden, and Mr. Nichol, of Boissevain, during the past year.

At our last annual meeting our membership stood at 164; during the year four honorary and 45 active members were accepted by your directors and secretary, 21 have withdrawn or sold out to others who belong now in their stead, leaving our membership at the present time 28 larger than last year. This is, indeed, gratifying, as our increase for 1897 was only four over the year previous. During the year a great many applications were refused, as they were from points where there are sufficient yards to supply the trade, and in fact in many cases one member less at these points would be an improvement instead of one extra. If all these applicants were able to get stock the competition would be so great and the business of each so much less, that it would have a very depressing influence on the financial ability of a great many, which would soon result in failure, and our honorary members would eventually have to shoulder a large portion of the losses.

Before closing, I wish to thank my fellow officers for their very able assistance and faithful work performed during the past year. All matters brought before them received their most careful attention and consideration.

We are glad to see so many members present at this meeting. A pleasant and profitable feature of this convention is the bringing together of members, active and honorary, renewing old acquaintances and forming new ones, and leading to free and full discussion on all matters relating to the trade.

Many subjects, no doubt, will come up at this meeting, which I trust will receive your most careful consideration.

Yours truly,

Jas. B. Mathers, President.

Mr. Byrnes added to the address a few words concerning the status of the trade. He said that the past year had been an exceedingly prosperous one ; and the prospects for the coming year were excellent.

Mr. John Dick, secretary-treasurer, presented the financial statement, which showed total receipts of $2,618, of which $784 was carried forward from the previous year, the remainder being made up of fees and dues collected during the year. The disbursements were $1,889, leaving a balance of $729 to the credit of the Association.

After reports of regular committees, the election of officers was proceeded with, the result being as follows :—

President—H. Byrnes, Winnipeg.

Vice-president—R. H. O'Hara, Brandon.

Directors—A. M. Stewart, of Morden ; A. J. Hughes, of Souris; Wm. Armstrong, of Portage la Prairie ; G. M. Miller, of Virden ; T. A. Cuddy, of Minnedosa ; D. Sprague, of Winnipeg.

An animated discussion was started by Mr. D. E. Sprague, of Winnipeg, who declared that the rules of the Association were not being adhered to by some of the members, and expressed the opinion that if this condition of things continued the Association might as well be dissolved. The specific charge was that over thirty million feet of lumber had been purchased from manufact-

President-elect Western Retail Lumbermen's Association.

urers in the United States. This was in controvention of the by-laws ; clause 3 stating that honorary members are not to sell stock to any men not active members of the Association, while clause 32 says that active members are to buy from honorary members only. It was claimed that the former clause was strictly carried out, while the latter was not. Mr. D. C. Cameron, of the Rat Portage Lumber Company, and Mr. C. M. Beacher, of the British Columbia Mills, Timber and Trading Company, said that if the retailers did not refrain in the future from breaking the by-laws of the Association they would withdraw from honorary membership. They pointed out that the Canadian manufacturers were able to supply the demand, and there was no reason for buying American lumber. A suggestion was made by one of the members that some changes be made in the by-laws to make them more workable.

Several retail dealers spoke in defence of their position. All confessed to have purchased American lumber, some giving as their reason that they must have some dry lumber, and that they could not get it from the Canadian manufacturers. The chief reason for buying American lumber seemed to be that it was cheaper than the Canadian production, and the members were compelled to buy it in self protection against competition from points on the Northern Pacific branch lines where American lumber was handled almost exclusively. The members were almost unanimous in agreeing that as things were it was impossible to live up to the rules of the Association.

Mr. Cameron said that the honorary members had agreed, at a meeting some time ago, on a tariff of prices. If it were necessary to revise this price list, they were prepared to do so, but so long as they had a published price list, any American competitor could come in and offer lumber at fifty cents or one dollar a thousand cheaper.

Mr. Beecher said that his company were willing to meet the competition from the south by adjusting prices, but the by-laws would have to be carried out by the active members. The discussion continued for several hours without practical results, and finally it was agreed that the directors of the Association should meet the honorary members the following morning and endeavor to come to some arrangement.

On the following evening the meeting was resumed to hear the report of the directors as to the result of their conference with the honorary members. The chairman announced that nothing definite had been done except that an agreement was reached that the honorary and active members would support each other in carrying out the objects of the Association. It was arranged that the directors and honorary members should hold a meeting at an early date to arrange a new price list. When this is done, the result will be made known to all the active members, and the revised price list will be sent to them.

Further discussion on the subject was opened by Mr. T. G. Robinson, of Winnipeg, who maintained that the only way to solve the difficulty was for the honorary members to control the supply of all kinds of lumber. He argued that at competitive points such as Winnipeg it was impossible to keep out a certain amount of American lumber. He confessed to selling one million feet of American lumber for one building last year. This he was able to supply at a less cost than he could have supplied Canadian lumber.

Mr. Cameron contended that in reality the American lumber was no cheaper than the Canadian, as in the case of the former the thicknesses were less than in the latter. He asserted that lumber that was sold as two inch stuff was cut in United States about an inch and three-quarters, and therefore Canadian lumber cut the full two inches, at $16 a thousand, was just as cheap as American lumber cut an inch and three-quarters, at $14 a thousand. He said that if the Canadian retailers were satisfied with 1¾ inch lumber for 2 inch, they were prepared to cut it that way and give them the proportionate reduction in price, but he had found that the retailers always demanded the full thickness. The meeting adjourned to attend the Hoo-Hoo banquet.

In the evening the lumbermen attended a grand Hoo-Hoo initiation and banquet. The following lumbermen were initiated into the mysteries of the Hoo-Hoo order : J. S. Lochead, Deloraine ; W. A. Morkill, Dominion City ; W. Armstrong, Portage la Prairie ; E. E. Greenshaw, Shoal Lake; J. L. Campbell, Melita; J. E. Campbell, Carman ; W. R. Stevens, Cypress River ; W. Robinson, Rat Portage ; A. J. Hughes, Souris ; S. Caswell, Rathwell ; C. W. Plummer, Boissevain ; J. W. McCutcheon, Glenboro ; W. Cranston, Clearwater.

The banquet was held in Rose's dining parlors, Livingstone block, and was attended by a large number of representative lumbermen from all parts of the province. The dining hall was prettily decorated, and an elaborate menu had been provided. The chair was occupied by vicegerent J. C. Graham. A number of able speeches, interspersed with witticisms, entertained the assembly until after midnight, when the jolly lumbermen and their friends dispersed.

## NOVA SCOTIA LUMBER OPERATORS.

[Correspondence of the CANADA LUMBERMAN.]

Residents of the town of Amherst and county of Cumberland without doubt own and operate more timber properties than those of any town and county in the maritime provinces. In the past few years they have been acquiring limits wherever they were to be obtained, with the result that they are now operating in every part of northern and eastern Novia Scotia and Newfoundland. Prominent among these are Dr. Hewson, of the Nova Scotia Lumber Company, Sherbrooke ; Hon. A. R. Dickie, part owner of the Sheet Harbor Lumber Company, and sole owner of the East River Lumber Company and Moser's river mill limits, twenty miles east of Sheet Harbor ; N. Curry, N. A. Rhodes, W. W. Black, D. W. Douglas, and Messrs. Lusby, some of whom own interests in the Newville Lumber Company, Newville ; Sheet Harbor Lumber Company, Sheet Harbor ; River Hebert Lumber Company, River Hebert, and others.

The gentlemen above named, with Charles Hillson, B. B. Barnhill, of Two Rivers, Thompson Smith, of Parrsboro, and George A. Fowler, of Newville, purchased one year ago the Exploits Wood Company's property at Exploits Bay, Newfoundland, and operated to the extent of four million feet the past season. These limits comprise about eight hundred square miles, timbered chiefly with a fine growth of pine. There is also a spruce growth on the limits that is valuable. The mill on the property was built by the former owners without regard to cost, and is stricly modern, with a capacity of twelve million feet per year. The logging, driving, sawing and shipping facilities are excellent; and with the experience the proprietors have in lumbering operations, the venture cannot but prove successful. Mr. George A. Fowler is outside manager, and Mr. Charles Hillson attends to the office work.

Rhodes, Curry & Co., Limited, also have large timber limits and mill at Athol, where they manufacture about three million feet of deals and timber per year. The mill is steam-power, with rotary saw, edger, trimmers, shingle machine and planers. The company utilize a large quantity of the timber, planks and boards sawn in the mill in their large house building and car building business, which is taken to their works at Amherst to dress for the purposes required.

### THE NEWVILLE LUMBER COMPANY.

The Newville Lumber Company operate at Halfway lake. Their large steam saw mill is about nine miles from Parrsboro, on the Cumberland Railway and Coal Company's railroad, and all their lumber is shipped to Parrsboro on it, the deals being lightered to West Bay for sphipment, while the boards and laths are shipped in small vessels direct from wharf. This company purchased the property from Young Bros. & Company, Limited, in 1896, and have sawn about fourteen million feet there since purchasing. The mill was thorouhgly repaired during the winters of 1896-7, and has done some good sawing since, over eighty thousand feet having been sawn in one day. The mill contains a live gang, patent edger, trimming and butting machines, lath and picket machines and planers, and is situated on the edge of the lake, which gives splendid storage room for logs. The limits are not far distant; the logs are hauled two to three miles ; the stream driving is not more than six miles ; spruce timber is the principal wood, but some hemlock and hardwood is also sawn. The owners are Amherst men. Mr. W. W. Black is the manager.

### CHARLES T. WHITE.

Mr. Charles T. White operates a large lumber business at Apple River. His stock of logs last spring was about five million feet. Early in the season his splendid steam-power gang mill was destroyed by fire, so he put two portable saw mills at work sawing up his stock. Mr. White intends rebuilding this winter, in order to be in readiness for next year's work, and will cut about the usual quantity of logs. He uses the saw instead of the axe for falling and cutting up, and says he gets from 8 to 10 per cent. more lumber by so doing ; besides, when the woodmen get use to the saw, they can do more work.

The burned mill was situated about two miles from the Bay of Fundy, but schooners could go up near the mill at high water. Most of the deals for export were lightered to Grindstone Island for shipment, as Mr. White has a mill at Point Wolfe, in New Brunswick, the deals from which are also sent to Grindstone. In both mills Mr. White ships from ten to 12 million feet, besides the boards and laths which he sends to the United States markets. He also ships a large quantity of piling to New York and other United States ports. In addition to the two gang mills, Mr. White keeps one or two portable mills running on logs that he cannot profitably get to the gang mills. In this way he gives employment to men and teams cutting, sawing and hauling to place of shipment. He is always open to buy timber lands, without regard to their situation, as he believes he can find a market for the lumber and make some profit out of it.

The settlement at Apple River has profited very much by Mr. White's energy and example. One result was the opening of a road through to Sand river and procuring a mail route through to connect into the Intercolonial railway at Maccan. Formerly the mails had to go by way of Parrsboro ovea a longer and very hilly road, so that it took two days hard travelling to reach Amherst, the county town, whereas now one can leave Apple River in the morning and take dinner the same day in Amherst. Hence the people are more enlightened and in touch with the outside world. Mr. White built a private telephone line from Advocate to Apple River, but the people of Apple River find it a great convenience and would be lost without it.

Mr. White and family resided at Apple River for a few years, but since acquiring the Point Wolfe property in New Brunswick, he removed to Sussex—his old home—where he has a splendid residence and is within easy reach of both of his mills, and also of St. John, where he procures his supplies and keeps in touch with the larger lumber merchants. With his facilities for manufacturing lumber, and the large quantity he handles, he can supply cargoes more promptly than manufacturers who operate on a smaller scale. Last year he made considerable shipments to the east coast of England. He is operating to about the usual extent this winter.

### PRESCOTT & GILLESPIE.

Prescott & Gillespie, of Shulee, on the Bay of Fundy, have a splendid timber property and mill. The mill is steam-power, and has a capacity of fifty thousand feet per day. A live gang, patent edger and butting machinery, with lath machines and planer, is the machinery used. The firm get some of their logs along the shore and tow them to the mill, where they have an endless chain sluice to elevate them into the pond. Mr. John Gillespie is the manager, and resides in the village. They saw about four million feet of English deals per year.

### YOUNG BROS. & COMPANY.

The above firm purchased timber property at St. Margaret's Bay from the old firm of N. L. Todd & Co. some three years ago, and have since added to it by purchasing a considerable tract of land, with mill and houses, at Ingram river, and also some timber land on East river. This gives the company the control of all the principal rivers between the head of St. Margaret's Bay and Gold river. Their limits extend northerly to the St. Croix waters, which discharge into the Bay of Fundy, via Minas basin. A considerable portion of the timber on the height of land—which they own—can be put into the Bay of Fundy waters or the Atlantic on the opposite side of the province at an equal cost.

The company got out last winter about eight million feet, which was sawed in their large gang and circular mill at head of St. Margaret's Bay. The bulk of the logs were cut on the river which discharges into St. Margaret's Bay, a short distance from the mill ; the remainder were cut on Ingram river, driven to tide water, then boomed and towed about eight miles to the mill. The situation of the mill is unique, being on an island in the bay and connected with the main land by a long bridge on one side, while the channel is on the opposite side—the water above the island forming a larger pond, where their whole stock of logs can be safely and easily boomed. Schooners of 150 to 200 tons can take cargo from the mill wharf, while large vessels, ships and steamers can lay at anchor and load at the lower end of the island, a mile or so from the mill.

The mill consists of a fast cutting "live" gang, a modern rotary, lath, picket box and shinge machines, also, apart from the main mill, but driven by same power, there are planing and matching machines. The lumber to be planed is taken from the trimmer table in the saw mill and delivered direct to the man in charge of the planer, being elevated one story while in transit. The power is furnished by four large boilers to a double cylinder right angle engine of 250 h.p., which drives the machinery easily. The gang averages sixty thousand superficial feet per day.

Mr. B. F. Young, the president, resides at St. Margaret's Bay, and has the milling and shipping operations under his view.

Mr. D. P. Young resides at Ingram River, where he has built a fine residence. He attends more particularly to the logging operations. Mr. C. W. Young, of St. Stephen, N. B., is also one of the company. In addition to their stock of saw logs, last winter they got out several thousand pieces of piling and also some cargoes of pulp wood. The company has in view the building of another large mill at either Ingram or East river, their being excellent facilities at both places and ample supply of logs.

The members of the company are thoroughly practical lumbermen, and were successors to B. Young, Newville and River Hebert, in Cumberland county, which properties they sold prior to purchasing the St. Margaret's Bay mills and timber lands. St. Margaret's Bay is 22 miles west of Halifax, the intervening country being rather uninteresting except for several lakes.

## UNSOLICITED PRAISE.

For the following complimentary remarks we are indebted to the Southern Lumberman, of Nashville, Tennessee :

"Among our most valued exchanges is the CANADA LUMBERMAN, which is published at Toronto, the capital of the greatest lumber-producing province in the Dominion, by the C. H. Mortimer Publishing Company, with a branch office at Montreal. The weekly edition is issued every Wednesday, and the monthly on the first day of every month. While devoted strictly to the lumber and allied interests of the Dominion, the CANADA LUMBERMAN is one of the fairest, most reliable, and conservative of lumber trade journals. In all our long acquaintance with it we have never known it to "fly off the handle" in any of the many sharp commercial controversies that have occurred between its country and the States ; but it has always treated every question in a high-toned and dignified manner that commands respect if it fails to carry conviction. It is a clean and high-toned journal, and both the weekly and monthly issues are sent post-paid to residents of Canada for $1 a year, and for $2 to any foreign country.

## PREVENTION OF SCALE IN BOILERS.

In an article in the November issue of the Home Study Magazine, in answer to the question, 'Will carbonate of soda or plain soda remove hard sulphate of lime scale?' the expert replies, 'I have never found it to be much good for that purpose. I can tell you, however, what will remove it pretty effectually—very cheaply too—and that is ordinary kerosene. If this is fed to the boiler at the rate of about one quart per day per 100 h.p., the benefit to the boiler will soon be apparent. It has also been found to prevent, to quite an appreciable extent, the formation of hard scale. Its action upon the sulphate of lime does not seem to be a chemical one, however, but rather a mechanical action. In my opinion, the minute particles of sulphate of lime precipitated by the action of heat, are first carried to the surface of the water by the boiling and bubbling of the water. There they become coated over with the kerosene, which prevents them from uniting in solid mass when deposited on the plates.'

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

# THE NEWS.

—Arthur Miller has established a shingle mill at Seagrave, Ont.

—L. A. DeLaplante, of East Toronto, has leased a lumber yard in Hamilton.

William Mitchell has registered proprietor of the Burrill Lumber Company, Shawenegan, Que.

—Mr. Arbuthnot has started a retail lumber yard at Minto, Man. G. B. Hughes has opened a yard at Teulon, in the same province.

—It is the intention of Messrs. Ranesbottom & Spencer to build a saw mill at Little Current, Ont. They are taking out a large quantity of logs this winter.

—The McGregor-Gourlay Co., of Galt, Ont., report a steadily increasing export trade. They recently shipped a large wood-working machine to Glasgow.

—Messrs. H. J. & R. M. Currie, of Eel River, N.B., have purchased the Restigouche sash and door factory at Campbellton. It is understood that they will continue the business as before.

—R. Konkle's saw mill at Beamsville, Ont., was badly wrecked by a boiler explosion on the 20th ultimo. The mill building was demolished and parts of the boiler carried a distance of five hundred yards.

—The Bronson & Weston Lumber Co., of Ottawa, have elected directors for 1899 as follows: President, E. H. Bronson; vice-president, S. T. Bronson; secretary-treasurer, Levi Crannell; W. G. Bronson.

—Mr. Thos. Southworth, Chief of the Ontario Forestry Department, recently read an interesting paper on "The Forestry Interests of Ontario," before the Engineering Society of the School of Practical Science, Toronto.

—It is reported that Theodore Ludgate, of Peterboro, has secured a lease from the Dominion government of part of the Stanley Park Naval Reserve at Vancouver, B. C., and that he will build an extensive sawmill thereon.

—J. & P. Nadeau, of Cascapedia, Que., have recently added to their saw mill a factory for the manufacture of house furnishings, chairs, mouldings, doors, etc. They are now manujacturing 300 doors for the British market.

—A circular from N. Janes & Son, of the Acme Veneer Works, Orillia, Ont., announces that they have added several new machines for turning out all kinds of veneer. They manufacture perforated chair seats and backs, butter plates, cheese boxes, pails, etc.

—Mr. James W. Woods, who for years has conducted a lumbermen's supply business in Ottawa, purposes erecting a large factory and warehouse and removing his factory to that city from Montreal. His business extends from coast to coast, and is steadily growing.

—The report of the Crown Lands Department shows that Nova Scotia has still a public domain of one and one-half million acres. Last year $20,000 were realized from the sale of Crown lands. It is said that efforts will be made to reduce grants of these lands to lumbermen.

—The Brunette Saw Mill Co., of New Westminster, B.C., has erected a new smoke stack, seven feet in diameter and 75 feet high, to be used instead of the large refuse burner, which gave too much draft to the furnaces. Other improvements have also been made to the mill.

—A party of Ontario lumbermen, including Angus McLeod, of Bracebridge; W. J. Sheppard, Waubaushene; John Brennan, J. Jolliffe and Henry Anderson, Orillia; and William and D. C. Irwin, of Peterboro, have gone to British Columbia, in connection with lumber interests in that province.

—A number of Toronto gentlemen, including Senator Geo. A. Cox, J. W. Flavelle, and others, want permission from the Ontario Government to build a railway from Haliburton through Whitney to Mattawa. This road would open up an important but at present inaccessable lumbering district.

—The Sheppard Lumber Company, composed of W. J. Sheppard, of Waubaushene, T. H. Sheppard, of Orillia, F. Gray and A. R. C. Smith, have erected a large steam saw mill at Brule Lake, in Algonquin Park, at which pine lumber will be manufactured, and a large hardwood mill and stave factory at Maple Lake Station, Parry Sound district.

—The report of Messrs. Niven and Carter, who recently explored along a line of meridian from Stroudfoot's Lake west to Night Hawk Lake, states that they discovered a large extent of valuable mining lands, well timbered with spruce, tamarac, poplar and fir. There is in the section a good field for the manufacture of pulp wood, 150 miles from north to south, extending to Hudson Bay.

—Mr. J. A. Williams has recently returned to Ottawa from Dawson City, where he was engaged in the lumber business. Mr. Williams states that there are six saw mills in operation at Dawson, and that the demand for lumber at present is more than supplied. Lumber sells at $90 to $150 per thousand feet, and men working in the mills have been paid as high as one dollar an hour. The labor supply is, however, becoming more abundant.

—It is reported that the Rat Portage Lumber Company, of Rat Portage, Ont., will keep a gang of men in the woods throughout the coming summer, in order to secure a sufficient supply of logs. The new mill which the company purpose building in Winnipeg will obtain its log supply from the Rainy River district, the timber to be shipped over the new Ontario & Rainy River Railway, which it is expected will be completed from Winnipeg to Rainy River this fall.

—A dispatch from Hamilton, Ont., dated Feb. 3rd, stated that one Johnston had been arrested at the instance of Richard Rusk, a lumber dealer from Muskoka Falls, charged with fraud. Johnston, it seems, wrote to the plaintiff stating that he was doing an extensive business in lumber, and asking for prices. Later on he ordered several carloads of pine, which were shipped. No remittances being received, Mr. Rusk visited Hamilton, and found that the business of B. F. Johnston was unknown. He, however, succeeded in tracing up the author of the order, who, it is said, has been implicated in similar transactions previously.

—The High Commissioner at London has sent a communication to the Department of Trade and Commerce at Ottawa, pointing out that a good market can be found in England for wood-meal or wood-flour. This is a commodity which is used as an absorbent for nitro-glycerine in the manufacture of various explosives. A finer grade is also required for the manufacture of the kind of linoleum known as "inlaid." The consumption of wood-meal in the British explosive trade is about 700 tons per annum, and the price paid for it runs from $20 to $24 delivered. It must be quite free from grit, dry, and packed in canvas bags of about 2 cwts. each. For the linoleum trade about 1,200 tons are used yearly, and the price runs from $14 to $17 per ton. It must be fully ground, white in color and light in weight. The Department of Trade will furnish to Canadian manufacturers the names of British firms using the material.

## PERSONAL.

Mr. Narcisse Gagnon, formerly manager of J. A. Parr's planing mills at Hull, Que., has accepted a position in Marinette, Wis.

Mr. David Elliott, head bookkeeper for the Gilmour Co., of Trenton, Ont., died in Ottawa last month. Deceased was 56 years of age, and had been in the employ of the company for some time.

Mr. Guy Buell, who for four years has been the Ottawa representative of D. L. White & Co., of Albany, N.Y., has gone to Burlington, Vt., having accepted an appointment with the Horatio Hickok Lumber Company, of that city.

One of the oldest and most respected residents of Brockville passed away on February 7th, in the person of Mr. Stephen J. Southworth, at the ripe age of 87 years. Deceased was the father of Mr. Thomas Southworth, Clerk of Forestry for Ontario.

Mr. A. P. Ebert, of Bay City, Mich., representing Hale & Booth, was a recent visitor at the office of the CANADA LUMBERMAN. Mr. Ebert informed us that the firm of Hale & Booth had, on account of the prohibition of the export of saw logs, closed down their mill in Michigan which they have been operating for the past two years. He stated that this winter they were getting out about 30,000,000 feet of pine, some 24,000,000 feet of which will come out of the Spanish river. These logs will either be sold or a contract placed with mills in the vicinity for sawing them.

Mr. C. E. Newton, lumberman, of Victoria Harbor, Ont., returned a fortnight ago from England. Speaking of the lumber trade he remarked that in England the sales and enquiries for Canadian pine, oak and butternut were phenomenal. He found Canadian pine bringing prices at least fifteen per cent. higher than the Norwegian production. The Scandinavian lumber, he said, was too narrow, and in a number of cases the contract for English houses expressly specified Canadian pine. Mr. Newton studied the question thoroughly, and is very hopeful of an extensive trade in lumber with Great Britain.

## PUBLICATIONS.

The American Monthly Review of Reviews for March contains a sketch of the late President Faure, of France, illustrated with portraits and other interesting pictures.

Messrs. I. Matheson & Co., Limited, New Glasgow, N.S., have issued their 1899 catalogue of the "Matheson" vertical engine and boiler. The booklet is neatly printed, with illustrations and complete description.

Messrs. Darling Bros., of Montreal, have issued a new catalogue, descriptive of some of the special machines which they manufacture, and for which they are sole agents in Canada. These include the Moore steam pump for stationary and marine boilers, the Morse valve reseating machine, the Webster vacuum feed water heater and purifier, the Nordberg governor, and many others. A copy of this catalogue will be forwarded to readers of this journal upon request.

A journal weighing several pounds reached our desk a few days ago, it being the anual special issue of Timber, of London, Eng. Among the articles in this number, which is profusely illustrated, are the following: "The Export Lumber Trade of the Pacific Coast of North America," by Frank B. Cole; "American Hardwoods and the Hardwood Export Trade," by D. W. Baird; "The American Joinery Trade," by an English importer. The issue reflects much credit upon the editor, Mr. W. L. Bird.

As has been announced in the advertising pages of the CANADA LUMBERMAN, Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, Mich., have issued their 1899 edition of "Saw Fitting Machinery and Tools," it being an exhaustive treatise on the care of saws and knives. From a perusal of the book we believe it to be one of the most complete works of the kind yet published. It contains 290 pages, weighs about 20 ounces, costs ten cents per copy for postage, and is mailed free by the publishers, on request, to saw mill and factory operators, superintendents, foremen and saw filers. In the book appear illustrations and descriptions of one hundred and fifty or more machines and tools for the care of saws or knives, many of which are new appliances, catalogued for the first time by Messrs. Baldwin, Tuthill & Bolton. This gives the book a distinct and permanent value to all practical men, while in addition there are carefully prepared articles on the practical side of saw and knive fitting.

## CANADA'S COMMERCIAL AGENTS.

FOLLOWING is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries:

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders:

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

# WOOD PULP DEPARTMENT

## THE PROCESS OF MANUFACTURING MECHANICAL WOOD PULP.*

By W. A. Hare.

(Continued from February issue.)

### PART III.—DESCRIPTION OF THE MACHINERY AND THE PROCESS.

Development of the Water Power.—Before describing the process, a few words may be said with regard to the water power. The installation of turbines, for the purpose of driving wood pulp grinders, presents more difficulties to the designer of the mill than would be found were the power required for ordinary uses. The process of grinding wood for pulp requires a great deal of power. One grinder which would have a capacity of five tons of dry pulp per day would require about 340 horse power, and for a daily output from the mill of 25 tons dry, which

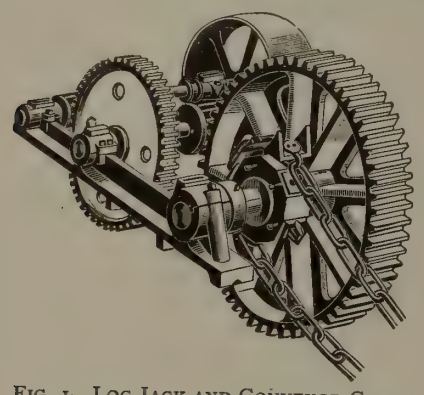

Fig. 1—Log Jack and Conveyor Chain.

is only a moderate sized mill, a supply of 1,700 h.p. for grinding alone will be necessary. About 5 h.p. will be required per ton of output to drive the lighter machinery, or a total for the above mentioned output of over 1,800 h.p. Steam power cannot be used for this service, as the variations in the load are so great that no steam engine could stand it. We must, therefore, use water power, which is eminently suited for the purpose. When such large powers are necessary, it is very important, when a site is decided upon, that the head should be fully developed. If the full head is utilized at first, taking sufficient water to develop the required power, it is comparatively easy to

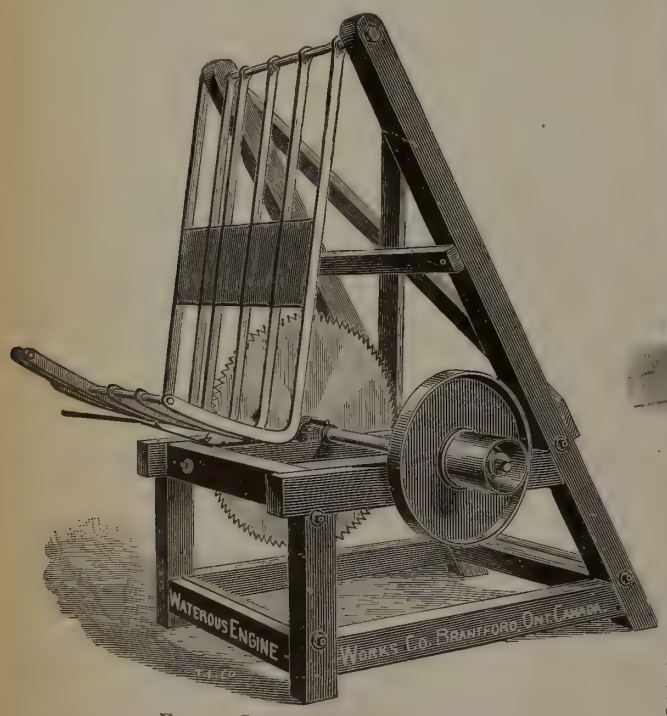

Fig. 2—Swing Frame Pulp Wood Saw.

add to the plant in the future by laying another pipe or otherwise increasing the quantity of water passed per minute, and installing more wheels. To increase the power developed by an increase in the running head will be found in most cases to be a costly remedy. This latter method is very unsatisfactory from the standpoint of a pulp mill owner. If a turbine is installed to run at a certain head, with full gate, and the head is afterwards increased, the wheel will develop more power certainly, but the speed will be higher also. As the turbines are directly connected to the shaft of the grinder, this means that its speed is also increased, which cannot be allowed if the correct speed were given to it at the first installation. If the speed of the grinder is not increased above 200 r.p.m., there is no harm done, but if it is above this to any extent, the wheels will have to run with partial gate, and it is doubtful if, in this case, you will get the efficiency of the wheels.

In almost any other industry the speed of the turbine is of no consequence, as the machinery can be run at any desired speed by means of belts or gearing; but where direct driving is necessary the wheels will have to run at the speed required by the machine. When the head is high, and to get the speed low enough you are forced to put in a large wheel which will give more power than will be required for one grinder, the difficulty may be overcome by coupling another grinder to the shaft of the first, which will, in all probability, take the surplus power. Even three grinders are sometimes connected up in this manner.

#### LOG HANDLING AND SAWING.

Log Handling.—It is important that the logs, when being handled in the yard, should be kept out of contact with the ground as much as possible, as grit and dirt in the bark will cause trouble when the stick is sawn and barked. If the logs are taken direct from the pond to the saw, it is easy to keep the wood clean by handling the logs with a chain conveyor, driven by a log jack. In Fig. 1 is shown a jack and chain made for this purpose by the Waterous Engine Works Co., of Brantford, Ont. By means of this machinery two men can handle from 60 to 90 cords of wood in a day. In some mills, where the logs have to be piled in the yard, a useful expedient to keep them clear of the ground is made use of. A strong staging is built of logs to a height of a foot or so, on top of which the logs are piled. Skids are sometimes used, but a log staging is better, as the space between the skids soon gets filled up with dirt and refuse. A conveyor can be run at one side of the staging, and when logs are wanted in the mill they are simply rolled off the staging into the conveyor, which carries them in to the saws.

Sawing.—On arriving in the mill, the log is automatically dumped by the conveyor on to the skids. It is next rolled onto the saw bed rollers, which enable it to be easily fed to the saw. In most mills the wood is ground from bolts 24 inches long, though some use wood 16 inches in length. If the wood is supplied to the mill in sticks 4 feet long, it only requires cutting in the middle to make 24-inch bolts. For such work as this, the Waterous Engine Works, of Brantford, make a very good saw, a view of which is shown in Fig. 2. The log is placed in the cradle, which is suspended from the top of the frame. A

Fig. 3—Pulp Wood Barker.

handle is provided on the cradle, by means of which the wood is swung against the saw. When the logs are supplied in long lengths this saw will not do, and another method has to be used. A swing saw can be used, the frame of the saw swinging on the counter shaft. In this way the saw is brought to the log. The capacity of a 38-inch saw, mounted in this way, would be about one cord per hour. Jump saws are used in some mills. These are run by a steam cylinder and piston. The piston is secured to the saw frame, which slides vertically in guides. On pressing the treadle, steam is admitted into the cylinder, driving up the piston and saw, which cuts through the log from the underneath. One of the mills in the Maritime provinces has installed a very satisfactory system. It consists of 6 or 8 saws, mounted in pairs, and so situated that only two saws can cut at a time. Between each pair of saws is a conveyor chain, running the full length of the saw bed. A log is rolled onto the upper end of the bed, and is caught up by all the conveyor chains at once, and carried to the saws. On passing each pair of saws, two cuts are made in the log, and when past them all the log has been entirely cut up into bolts, each 2 feet long. At the end of the saw table or bed is a chain conveyor which carries the blocks to the barkers. It is tended by one man, and has a large capacity. The saws run at about 800 r.p.m., and are usually 36 and 38 inches in diameter.

#### BARKING AND SPLITTING.

Barking.—To procure clean pulp, all bark and discolored parts must be removed from the stick, leaving only sound clean wood. The bark is cut off by means of a barker, a cut of which is shown in Fig. 3. This machine is also built by the Waterous Engine Works, of Brantford, Ont. It consists in a cast iron disc mounted on a shaft and carrying on its face knives placed at regular intervals in a circle. On the reverse side of the revolving disc are bolted cast iron wings or fans of suitable size. The whole disc, etc., is surrounded by a cast iron frame, which carries the bearings for the shaft. Part of the frame in front of the face is cut away, giving access to the knives, and a suitable rest is provided to support the wood while it is being barked. The frame is of large size, and is made in two pieces, fitted with planed edges. The knife disc is 52 inches in diameter, made of cast iron, with a steel band shrunk on its edge, turned perfectly true, and balanced. The knives are four in number, and are 11½ inches long. The shaft is fitted with fast and loose pulleys, or with a belt tightener, which is considered by some to be better. The capacity of this machine, when running at 600 r.p.m., will be from 7 to 10 cords per day, though it can be forced up to 14 cords in 24 hours. In operation this machine works very well. The bolt or log is placed on the rest, and pressed against the knives, the end thrust of the cutting action being taken by a roller and stud, mounted on the frame as shown. Each knife, as it passes, cuts a

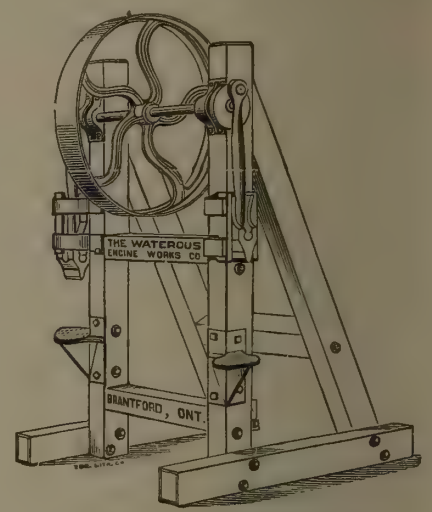

Fig. 4—Pulp Wood Splitter.

strip of bark off the log throughout its whole length. By revolving the wood slowly by the hands, the knives cut the bark completely off. The chips pass through the disc by means of a hole provided in front of the knives, and are caught up by the fans and blown out through the outlet shown in the frame. A pipe is usually connected to this orifice, which carries the chips to a distance. By means of the fans the chips are prevented from lodging in the frame, so that the disc is always running freely. This also serves to automatically remove the shavings to any desired locality.

When the revolving of the wood is done by hand, it is not done regularly, and the output of the barker will vary considerably, according to the skill and industry of the operator. It would be advisable to revolve the wood automatically, and thereby maintain a constant feed to the knives, which will be independent, to a certain extent, of the operator. Various attachments have been invented for this purpose, all of more or less usefulness. One of the best is Butterfield's, which can be applied to almost any standard barker. By the constant relation of speed between the knives and the surface of the wood, each knife cuts, approximately, the same amount of bark, and in this way the quantity of clear wood removed while barking is materially reduced. It is claimed by the makers of this attachment that from 5 to 8 per cent. more clear wood can be obtained from the same quantity of unbarked logs by using this device than by the ordinary method. The great point of its usefulness, however, lies in its increased speed and regularity of cutting. By the regularity in rate of cutting no time is lost, as the knives are prevented from cutting over the same space, as is frequently the case in hand feeding. The output is thereby increased, it is claimed, by from 80 to 100 per cent. By this means the price of a barker, as well as an operator's wages, can be saved. The power to drive the barker, however, will be increased in almost the same ratio as the output. When the wood is barked, it is thrown into the conveyor running to the grinder room; but if it requires splitting, it is thrown near the splitter. The knives require repeated grinding, especially if the wood has been in contact with the earth. When dull they should be ground on a special stone, used for this purpose and no other.

Splitting.—Where large wood is used, it is necessary to have it split if it is too large to enter the grinder pockets. This operation is done after the wood is barked, and before it is sent to the grinder room. The machine shown in Fig. 4 is a double wood splitter manufactured by the Waterous Engine Works Co. The frame is made of well seasoned wood and strongly bolted together. A shaft carrying a pulley and two disc cranks is mounted on the frame, as shown. From each of these cranks is driven a block, sliding vertically and connected

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.*

VOL. V. TORONTO, ONT., MARCH 1, 1899 No. 6.

## CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

THE UNDERSIGNED HAS ON HAND TWO and one-half million feet of Spruce Logs, lengths 10, 12, 14, 16 18, 20, 22, 24 and 26 feet and is prepared to manufacture same in any form desired having for this purpose a stationary saw mill equipped with gang edger, planer and shingle machine, with a capacity of 0,000 feet per day. A purchaser is desired who would contract for the entire cut of mill. Correspondenee solicited. JAMES RITCHEY, Makinak (L. M. C. Co. Railway), Manitoba.

WANTED.—Dry Butternut, or Sycamore 2-inch Plank. JAMES WARNOCK & Co., Galt, Ont.

WANTED.—Dry Soft Elm, Basswood and Ash, for cash. JAS. MORRISON, 552 Yonge St., Toronto.

WANTED.— ¼ Hard Maple—white, plain and quarter-cut. JAMES MORRISON, 552 Yonge St., Toronto.

WANTED—Will pay cash for Ash, Elm and other Hardwoods Address—M. E. BEARSE, 62t Exchange Building, Boston, Mass

FOR SALE.

MESSRS. DOBIE & CO. and DAVID GORDON, of Thessalon, are taking out 1,500,000 feet of Hardwood Lumber, and are open for offers.

WANTED.

TO CORRESPOND WITH PARTIES HAVING Lumber Logs, and Standing Pine for sale, tributary to Georgian Bay. A. P. EBERT, Pembroke Ont.

WANTED.

ABOUT five hundred yards of second-hand, light Iron Rails, for tram track. PICKARD & ROWAN, Owen Sound.

WANTED.—One first-class band saw fitter and millwright; a good foreman to take charge of mill; also a shipper Apply to THE GODERICH LUMBER CO, Wiarton, Ont.

WANTED.—Lumber Truck Wheels for use on tramway. State diameter, thickness of rim, depth of flange bore of axle, and net cash price per pound. H. CARGILL & SON, Cargill, Ont.

IMPORTANT TO LUMBERMEN

## FOR SALE BY TENDER.

### Valuable Saw Mill and Timber Limits in British Columbia

56,542 ACRES, MORE OR LESS, VIRGIN forests of Oregon Pine, Cedar and Spruce Limits in British Columbia as follows:—

**BLOCK 1.**

Lot 51, 23,600 acres, more or less, Sayward District, Vancouver Island.

**BLOCK 2.**

Lot 439 G2., 9,280 acres, more or less, New Westminster District.

Lot 50 G., 6 720 acres, more or less, New Westminster, Chilliwack.

Lot 55, 15,900 acres, more or less, New Westminster, Chilliwack.

Lot 83, 1 042 acres, more or less, New Westminster, Chilliwack.

The above limits were selected years ago by competent cruisers at a time when every opportunity offered and was taken advantage of to secure the "pick" of timber lands, which have since become greatly enhanced in value.

**BLOCK 3.**

About 400 acres, more or less, of mill site and first-class farm lands, en bloc, situated on the north branch of the Fraser River about three miles east of New Westminster City. 200 acres, more or less, of this land is cleared, graded, drained and fenced in first-class manner, and been under cultivation a number of years.

The mill located upon this site is a frame mill, about 455 x 72 feet, with T across tail end of main building about 156 x 60 feet. The whole structure from foundation up is built in the most substantial manner—well timbered and braced with knees, metal roof, three (3) engines of 300 h.p each, and fitted throughout with special machinery for working up British Columbia timber of all dimensions, as well as for working up the refuse into lath, pickets, box shooks, etc.; also planers, matchers, etc.

One large refuse burner; one large stone boiler house, metal roof, containing ten large tubular boilers, pumps, etc. Good frame office, boarding house, cottages, horse stables, machine shops and blacksmith shop.

Ample booming ground, constructed in the most substantial and convenient manner.

The New Westminster branch of the C. P. Railway crosses this mill site, also has a switch graded to the mill and through the yard, giving this property first-class railway outlet, in addition to best facilities and ample water for loading large ocean-going vessels, giving the property unrestricted access to the markets of the world.

Sealed tenders for the above property, either en bloc or each parcel or block separately, will be received by the Secretary of the undersigned at their office, 110 Wellington Street, Ottawa, Ont., up to MAY 20TH, 1899, at twelve o'clock noon.

All tenders to be marked "Tenders for Maclaren-Ross B C. Property."

Tenders to be opened by the President and Secretary at the above address.

Terms, 10% cash, 20% in thirty days, and balance in six, nine and twelve months, by secured notes at 5% per annum. The property to remain vested in the Company until notes are fully paid.

The highest or any tender not necessarily accepted.

All letters requesting further information to be addressed to—

"THE SECRETARY,
"Maclaren Ross Lumber Co., Limited,
"110 Wellington St., Ottawa, Ont."

Ottawa, Ont, 15th February, 1899.

### BUSINESS NOTES.

Creditors of J. M. Rutier, Brome Corner, Que., have been notified to file claims.

The Cumberland Coal & Lumber Co., of Albany, N. Y., has been incorporated, with a capital of $200,000.

Callin & McDonagh, lumber dealers, Russell, Man., have dissolved partnership, A. B. Callin continuing.

Frame & Verge, of Boston, Mass., have filed a bankruptcy petition. The firm assigned in May, 1898, with liabilities of $48,430 and assets of $5,849.

Raemer Wigle has withdrawn from the Blind River Lumber Company, of Blind River, Ont. The business will be continued by the remaining partners.

### CURRENT TRADE CONDITIONS.

ONTARIO.

The time has arrived when the spring movement of lumber should commence, when contemplated construction work should cause dealers to stock up in anticipation of the season's requirements. Retail stocks were drawn upon to some extent during the winter, and are by no means heavy, rendering replenishment a necessity. At the mills the quantity of unsold lumber is less than it has been for several years. These conditions account, in part, for the volume of the trade of the past week, which was of a most satisfactory character. In the pine trade the chief transactions have been in low grade and common stock, of which the supply is rapidly becoming depleted, and before the new cut is available there will be little upon the market The demand for mill culls is almost unprecedented, and manufacturers who held this class of stock for higher prices are now reaping the benefit. Considerable stock has changed hands in the Ottawa valley for shipment to the United States, and there, as in the west, the outlook is hopeful. Much interest pertains to red pine, the British demand for which has become so pronounced. Severel manufacturers have disposed of their 1899 cut, and it is learned that one manufacturer at least has sold his production for the season of 1900. This fact forcibly illustrates the strength of the market. It seems almost incredible that in such a short space of time Canadian red pine should become so popular in the British market.

Any reference to the hardwood trade must be almost a repetition of what has already been said. The market is strengthening, demand expanding, and stock becoming scarcer. Numerous orders are being refused for black ash and soft elm, the supply of which, it may be said, is exhausted, while of the other hardwoods it is difficult to find any considerable stock. Mill men have grasped the situation, and those having any dry lumber are not backward in asking fancy prices. Birch is in greater supply than the other woods. Early in the year a word of warning was sounded to manufacturers that prices might weaken in the spring, in view of the supposed heavy production of logs. Conditions have been changed somewhat by an unfavorable logging season, and it is not believed that the crop of logs secured has been more than an average one, while the winter season seems now to be at an end. With the prospects for a good trade, prices are not likely to depreciate to any extent.

QUEBEC AND NEW BRUNSWICK.

As the logging season draws to a close, it becomes more evident that the production of spruce logs will be limited. In Quebec the cut will be an average one, bnt in New Brunswick and Nova Scotia operations have been much curtailed. Compared with last year spruce deals are considerably higher. Manufacturers are looking forward to a better demand, and resuse to contract excepting at prices from one to two dollars in advance of those of last year. The cedar shingle market is firm, there being a steady trade with the Eastern States, where this class of shingle is growing in favor.

MANITOBA AND BRITISH COLUMBIA.

Bright building prospects in Manitoba and the North-West Territories have caused lumbermen to look forward to the season of 1899 as likely to be quite as prosperous as that of the previous year. Already there is a considerable movement of lumber, and plans are under way for several important buildings to be erected in the city of Winnipeg. Although the price list has not yet been re-arranged, it is thought that very few lines will be offered at lower figures than those which ruled last year.

In British Columbia the demand for lumber is unusually brisk, chiefly on account of the activity in building operations. Foreign trade is also of considerable volume, and lumbermen are much encouraged at the outlook.

UNITED STATES.

It can truly be said that the lumber trade of the United States is in a flourishing condition. While the spring movement has not yet commenced, the heavy purchases made during the past week show that wholesale dealers anticipate an active demand. Chicago dealers have closed for several mill cuts in the Duluth-Superior district, and have paid advanced prices for the stock. Eastern dealers, who showed a disposition to wait in the hope that prices would weaken, are now convinced that this will not be the case, and are stocking up quite liberally. The greatest scarcity pertains to low grade boards suitable for box-making. This grade of white pine is almost exhausted, and substitutes are being purchased in some instances.

Spruce is improving. In New York 13-foot stock is very scarce; there is practically none at the mills, and the

stock on hand in Albany is the lowest in years.

Prices of hardwood lumber have a tendency to further advance. Black and white ash and soft elm are much enquired for, and orders have been refused owing to inability to find the stock. In Wisconsin and Michigan logging conditions have been somewhat unfavorable, and as a result the output of basswood, elm, birch, maple and ash will not likely be as great as was expected earlier in the winter. The weather in the south has also been unfavorable, and a restricted imput is expected. These conditions cannot but result in strengthening the hardwood market.

FOREIGN.

The movement in Great Britain towards contracting for the season's supply of lumber is still backward. One reason for this is that shippers are asking higher prices, which buyers refuse to pay until convinced of the absolute necessity of doing so. The market for white pine is steady, and stocks sold at recent sales have realized average prices. There is a brisk demand for red pine, which has practically passed out of first hands. Spruce is likewise enquired for freely, some sales having been made recently at prices which show a considerable advance.

In France and Germany the trade of this year has not exhibited much life. For some reason buyers have not entered the market with the usual vigor. The South American market is improving.

### STOCKS AND PRICES.

The Spanish River Lumber Company has decided to operate its mill at Spanish River the coming season.

Chicago dealers have purchased most of the No. 4 boards on Lake Superior, paying therefor from $6.50 to $7.00 per thousand.

At a recent sale of Hodson, Mabbs & Co., London, Eng., 240 loads of first-class oak sold at 88s. to 97s., averaging 92s. 6d. per load.

The J. B. Armstrong Manufacturing Company, of Guelph, Ont., want a quantity of basswood, ⅝ inch, ¾ inch and 1 inch culls.

Perley, Lowe & Co., of Chicago, have closed for the purchase of the Peshtigo Lumber Company's mills at Peshtigo, Wis., amounting to 30,000,000 feet.

The city of Brantford, Ont., wants tenders by March 20th for the annual supply of lumber, cedar posts and oak planks. Particulars may be obtained from the city clerk.

J. B. Kemp, of Pembroke, Ont., is in the market for 3,000 cords of green spruce, also for 15,000 railway ties, delivered on the line of the C.P.R. between Carleton Junction and Moore's Lake.

The Skillings, Whitney & Barnes Lumber Co., of Ogdensburg, N.Y., have just been given an order for 180,000 feet of one-half inch pine lumber, to be shipped to Porto Rico, to be used in making sugar boxes.

The Emporium Lumber Co., of Buffalo, is reported to have purchased from F. H. & C. W. Goodyear and the Pennsylvania Canning Company, all of the hardwood on 7,000 acres of land in Cameron and Potter counties, Pennsylvania.

The city council of Winnipeg, Man., has accepted the tender of T. D. Robinson & Co. for the supply of from 1,000 to 2,000 cords of cedar blocks, at the price of $11.98 per cord. Other tenderers were: J. G. Hargrave, $12.14; Kelley Bros., $12.47.

Mr. William Margach, crown timber agent at Rat Portage, Ont., reports that logging operations are being carried on extensively in that vicinity this winter. The quantity of ties, piles, telegraph poles and cedar posts cut during the season will be greatly in excess of any previous year.

In the Duluth-Superior district there is only about 20,000,000 feet of last year's production of lumber yet unsold, while is is estimated that over 90,000,000 feet of the 1899 cut has been contracted for at prices from $1 to $1.50 higher than quotations of one year ago.

Messrs. Denny, Mott, & Dickson, of London, Eng., says regarding Canadian timber: "Waney pine and oak have been little enquired for, but there has been a fair enquiry for elm. Prices remain firm, as there is little anxiety as to the moving off of the present moderate stocks before new supplies can come to hand."

O. E. Konkle, of Hamilton Ont., will shortly commence to get out oak in the vicinity of Farmers and Morehead, Kentucky, having been given a contract to furnish oak for a number of British war vessels. The American Lumberman is authority for the statement that he intends to purchase 2,000 acres of oak lands, and that 5,000,000 feet will be required for his purpose.

Referring to the probable log supply of the Michigan mills for the coming season, the American Lumberman says: "The Siginaw Lumber and Salt Company has 15,000,000 feet of logs now in Saginaw river, and will get 10,000,000 feet more from Canada this year, the latter being cut on Indian lands. The mills of Pitts & Co., McEwan Bros. & Co., William Peter, F. E. Bradley, and one or two others on the river, chiefly depend upon Canada for stock. Eddy Bros. & Co., are operating in Canada, but also in Michigan, and will have a partial stock for their mills. The Central Lumber Company depends upon Canada for a portion of its stock, and it will be a hardship if the 10,000,000 ft. being put in on the Blind River are not allowed to come over. Pelton & Reid, of Cheboygan, have 15,000,000 feet of logs cut on Indian lands, which will be allowed to come over. It is also to be remembered that a considerable quantity of Canada logs cut last winter were hung up by the sudden disappearance of snow, and these logs have mostly been purchased by Michigan mills."

### THE MAINE LOG PRODUCTION.

A dispatch from Bingham, Maine, relating to the log input, says: The exceptionally fine season for lumbering, the fair outlook for an advance of prices for manufactured lumber and the improvements made by the Kennebec Log Driving Co. along the Kennebec river, have tended to cause each of the lumbering firms to increase their expected cut, so that the year 1899 will see the largest cut of timber ever made and rafted in the Kennebec waters, it being nearly one-third larger than the estimate given by the Associated Press at the beginning of the season. There is every reason to believe that manufactured lumber will be $2 per thousand more this year. Improvements along the Kennebec are such that driving will be practically easy compared with former years. A conservative estimate of the cut to date is as follows: In the Skowhegan section, 28,000,000; the cut in the Dead river regions, Berlin Mills, 9,000,000; Clark Bros., 1,000,000; Elias Thomas, 500,000; Elias Thompson & Co. on Bay Brook, 250,000; on the Carry, 100,000; Lawrence Newhall & Co. on the North Branch, 6,000,000; Lawrence Newhail & Co. on Moose river, 8,000,000; Elias Thomas on South Branch, 1,500,000; on Supton Brook, 2,000,000; Viles and Thomas on Black Brook, 1,000,000; Viles & Co. on Carry Pond, 500,000; Lawrence Bros. and Hollingsworth and Whitney Co. on the Spencer, 6,000,000.

### SALE OF CANADIAN LUMBER.

At an auction sale held by Foy, Morgan & Co., London, Eng., on February 16th, the following prices were realized for Canadian goods:

SPRUCE—Ex Souverain, from Dalhousie, N. B.—12 x 17 ft., 2 x 6 in., unassorted, £6; 12 x 16 ft., 2 x 6, £6; 9 x 11 ft., 2 x 6, £5 17s 6d; 5 x 8 ft., 2 x 6, £4 17s 6d; 9 x 18 ft., 2 x 5, £5 2s 6d. Ex Iona, from Quebec—13 ft., 3 x 9 in. 2nd quality, £17 15s. Ex Madura, from Saguenay, Que.—12 x 13 ft., 3 x 8 in., 1st quality, £7 10s; 9 x 16 ft., 3 x 8, £6 15s; 6 x 18 ft, 3 x 7, £6 17s 6d; 13 x 16 ft., 3 x 8, 3rd quality, £6 15s; 12 x 13 ft., 3 x 8, £6 10s; 16 x 18 ft., 3 x 7, £6 10s; 14 x 15 ft., 3 x 7, £6 10s; 12 x 13 ft., 3 x 7, £6 10s; 9 x 11 ft., 3 x 7 and 8 in., £5. Ex Madeline, from Quebec—13 x 14 ft., 3 x 11 3rd quality, £7 10s; 12 ft., 3 x 11 £7 5.

BRITISH COLUMBIA PINE.—Ex Khorasan, from Vancouver—8 x 15 ft., 3 x 3, 1s 3d per cubic ft.

### CORRECTION.

A typographical error occurred last week in the advertisement of the Ross-McLaren Lumber Company on the first page. Block 2 should have read "Lot 423 G 2; 9,280 acres, more or less," instead of 29,280 acres.

### LUMBERMAN'S INSPECTION BOOK.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

Martin Bros. & Co., have registered partnership in Montreal as box manufacturers.

Arthur Ellison, saw mill, owner, Port Hanley, Ont., is reported to have assigned to A. J. Clark.

Buffalo and Tonawanda lumber merchants are said to be interested in the failure of Samuel A. Skead, of New York.

H. Shaver's saw mill at Shaverton, near Tilbuy, Ont., was destroyed by fire on Sunday last. The loss is $5,000 and the insurance $3,000.

The assignment is announced of Joseph Jacob, contractor, of St. Henri, Que., the liabilities being $45,870. The Montreal Lumber Company is a creditor to the amount of $1,500.

The schooner H. B. Homan has been chartered to load lumber at St. John, N. B., for Grenada, at $5. The schooner Mercedes will load lumber and spars at Belliveau's Cove, N. S. for Barbados.

### LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts.; Pembroke to Montreal, 8c.; Quebec, 13c. per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs. Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts.; lightered 19 cts. per 100 lbs. Pembroke to New York, track delivered 18c., lightered 20c. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Har-

Do You Use Mahogany?
If so don't buy until you have seen or inquired about our now famous . .
TABASCO MAHOGANY
Finest figured wood on the market; is hard and takes elegant finish. Brings highest prices in Europe, but we sell here about same prices as ordinary mahogany. Specially adapted for fine cabinet and interior finish . . . . . .
LAWRENCE & WIGGIN
Importers and Manufacturers BOSTON, MASS.

por, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the distr t freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

The rates at present in effect on the Canadian Pacific Railway to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. The rates are based on a minimum of 30,000 lbs. per car."

Summer rates to New York, via Albany and barge line, expired on November 28th, owing to closing of navigation on the Hudson river, and the usual all rail rates became effective, as follows: To New York, for track delivery, and all points on the Hudson river, or the New York Central and West Shore railways, from Ottawa, Hull, Aylmer, Deschenes Mills, 15c. per 100 lbs.; from Carleton Jun tion, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including lith erage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

Summer rates to Montreal expired on November 15th, and the usual winter rates became effective as follows: From Ottawa, Hull, Aylmer and Deshcenes Mills, 5c.; Carleton Junction, 6c.; Arnprior and Braeside, 7c.; Renfrew, Eganville and Pembroke, 8c. The rate to Three Rivers is 4c. and to Quebec 5c. over the rate to Montreal. The minimum car load in all cases where rates are computed on a weight basis is 30,000 lbs.; when on a measurement basis 10,000 feet B. M.

The C.P.R. also make the following rates on seasoned pine lumber to West St. John, N B., for export: From Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, $3.75 per M feet; Carleton Junction, Braeside and Arnprior, $4.00 per M feet; Renfrew, Douglas, Eganville and Pembroke, $4.50 per M feet. On lumber for local consumption at St. John, N B., and common points the rate is 20 cents from Ottawa, Hull and Aylmer, and to Halifax 21 cents from same points. On seasoned pine lumber the rate from Ottawa to Oswego, N.Y., is $1.90 per M feet, and to Syracuse, N.Y., $2.20 per M feet; from Ottawa to Buffalo, 12 cents and to Detroit 14 cents per 100 lbs.; to Boston, Mass., and common points, 15 cents from Ottawa, Hull, Deschenes Mills and all points east thereof; 16 cents from Carleton Junction; 17 cents from Arnprior, Braeside and Renfrew, and 18 cents from Eganville and Pembroke, and proportionate rates from points further west on lumber for consumption in the United States. The export lumber rate is 13 cents from Ottawa and Hull, 14 cents from Deschenes Mills, Aylmer and Carleton Junction, and 15 cents from Arnprior and Braeside to Boston.

(If bent to shape, $2.00 per thousand more.)

therewith by a pitman rod. A step is alsc provided upon which to place the wood to be split. It is made of cast iron, and is bolted to the frame. The wedge or axe is fastened to the sliding block, and rises and falls with it. The two cranks are placed 180° apart on the shaft, to prevent two blocks being split at the same time, which would cause a sudden strain on the driving gear. Splitters do not demand much power for their operation, and consequently can be run with light machinery. The wood used in most mills is small enough to enter the grinder pocket without previous splitting, and when an occasional stick occurs that is too large, it is split with an axe.

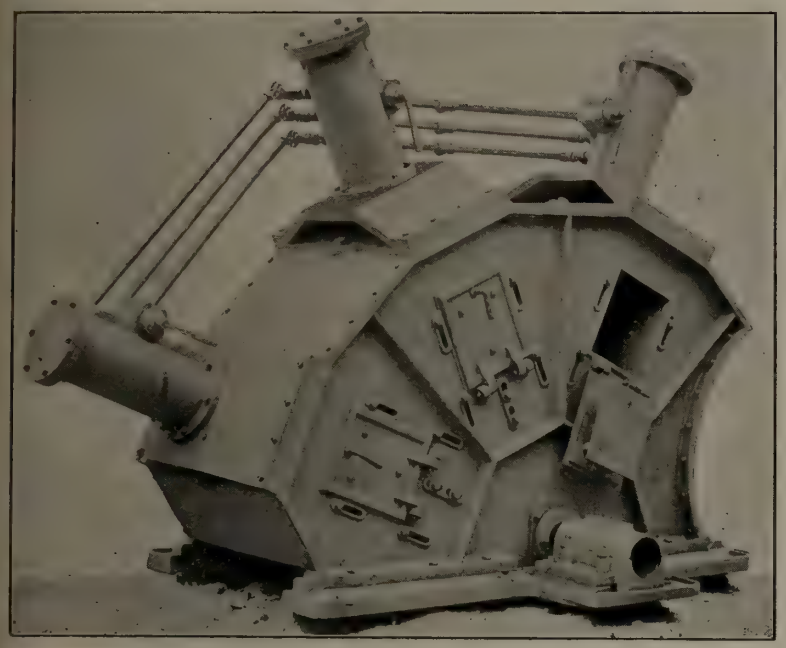

Fig. 5—Wood Pulp Grinder (made by Robb Engineering Company.)

### GRINDING.

Description of Grinding.—The wood is conveyed from the wood room to the grinder room. Here it is ground on revolving stones by hydraulic pressure, being thereby reduced to pulp. Fig. 5 is a cut of a grinder manufactured by the Robb Engineering Company, of Amherst, N.S. This grinder is very strongly built, and is a good example of the closed frame type. As will be seen from the illustration, the grinder consists of a heavy cast iron bed plate which carries the bearings of the shaft, and two cast iron side plates, between which the stone revolves, and where the pockets are situated. Above each pocket is fixed an hydraulic cylinder, which furnishes the pressure required to force the wood against the stone. Doors are fitted in one of these side plates, through which the wood is passed in filling the pocket. The sides of the pocket are cast iron plates, which can be raised or lowered to suit the wear of the stone, and are adjusted with screws and clamp bolts passing through the main frame. These pockets are made to take 24 inch wood and are 13 inches wide. The cylinders are made either 8 or 10 inches in diameter, and each is independent of the others, being controlled by its own lever and valve. These cylinders are lined with drawn brass tubing, which is an advantage. All valves and valve seats are made of phosphor bronze. The pistons are packed with double cupped leather packing, which works equally well in both directions. The shaft is of steel, 7 inches in diameter in the bearings, and 7½ inches in the stone. The bearings are 7″ × 20″, lined with babbitt, being oiled and cored out for water circulation. Heavy flanges of cast iron are provided on each side of the stone, faced and turned true, and threaded right and left hand on the shaft. The shaft is provided with packing boxes where it passes through the frame, which prevents leakage of pulp and water. The stones used with this machine are from 48″ to 50″ diameter by 26″ face.

The capacity of a grinder depends on the power supplied. With 10″ cylinder and using 400 h. p., this one is capable of making about six tons of dry pulp per 24 hours, or with 8 inch cylinders and 280 h.p., the capacity would be between 3½ to 4 tons dry in the same time. The speed should not exceed 200 revolutions per minute, and may run as low as 175 without disadvantage, depending on the material to be ground, pressure, and other considerations.

Fig. 6 is the standard open frame type of grinder manufactured by the Jenckes Machine Company, of Sherbrooke, Que. This machine is constructed in a substantial manner and has given good satisfaction. The cylinders are cast iron, lined with brass, and fitted with cast iron heads. The lower heads are bolted direct to the top of the pocket, and are hollow castings fitted with doors on each side, which can be removed should the lower glands require packing or adjusting. The piston rods are made of steel, $3\frac{15}{16}$ inches in diameter, and are connected to the followers by shrinking, and also secured by two brass nuts, one being a lock nut. The piston head is packed with four square rings ⅝ inch wide. Glands for piston rod are made of brass, secured by 3 stud bolts and brass hexagonal nuts. The pocket followers are made with strips cast on the face, which prevents the rolling of the wood in the pockets. This is quite an advantage, as rolling may cause a serious break. The pockets are constructed in one piece, two inches in thickness, and can be adjusted sufficiently close to the stone so as to prevent the formation of splinters to any great extent. The middle pocket is made larger than the other two, it being 16 inches wide, while the others are 14 inches. The pockets are raised and lowered by two 2-inch screws each. The doors are made of steel plate, and slide in a groove cast in the frame. The main boxes for the shaft are self-adjusting, and conform to any variation in the shaft. They are 18 inches long and wood lined; the bearings running in water. The flanges for the stone are made of steel 38 inches in diameter, faced up true and threaded right and left hand on the shaft. The shaft is made of hammered steel, keyed for coupling, or can be made for a shrink coupling if required. The grinder case can be tipped up, allowing access to the stone when necessary. The stone is 54 inches in diameter by 26 inch face, in the larger size, and 18 inch face in the smaller.

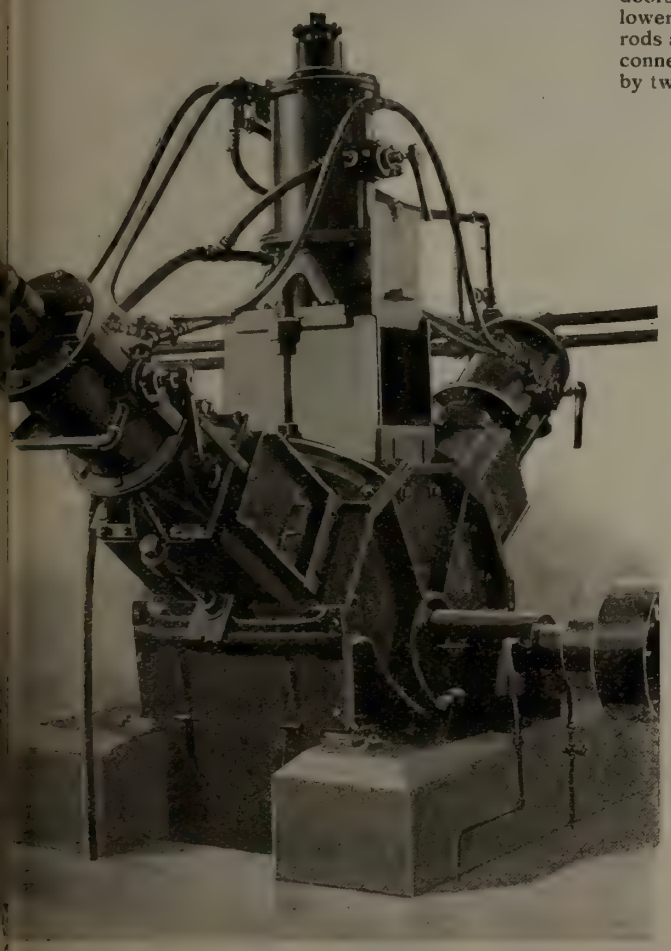

Fig. 6—Port Henry Wood Pulp Grinder.

Operation of the piping system of the Port Henry grinder.—In Fig. 7 is shown a side view of the Port Henry grinder, described above. This gives a good illustration of their manner of piping, which is claimed by the makers to possess many advantages. In the operation of any pulp grinder, one pocket at least must be idle all the time. This is necessary, for when a pocket has finished grinding, another must be thrown on to take up the load while the first is being refilled. Suppose, in this case, the two side pockets are grinding, and one of them requires refilling, the centre pocket being idle. By changing the three-way valve A, the high pressure is thrown on the centre pocket, and causes it to grind under high pressure. The empty side pocket being now relieved, the low pressure water automatically opens its check valve, and acts upon the piston from the under side, lifting it and its follower from the stone. The pocket is then refilled. Valve B is shifted, allowing the low pressure to bring the piston down until the wood is pressed firmly against the stone. At this point the three-way valve is turned, so that the high pressure water is diverted from the centre pocket, and enters on the top of the piston of the side pocket, at the same time automatically closing the low pressure check valve. The centre pocket is now idle, and should the other side pocket require refilling, the process of doing so is similar to that described. If the centre pocket requires refilling, the follower is lifted from the stone by means of valve B, which is always connected to the low pressure. The pocket is then refilled, and the low pressure let into the cylinder above the piston. In this manner, as above stated, the cylinders are always filled with water at either high or low pressure, consequently when the three-way valves are shifted there is no loss of time before the pockets begin to grind. By this method of piping the grinder is always taking the same amount of power with comparatively small variations, and this enables the speed to be kept fairly constant. This is important, as when the speed is allowed to vary considerably, the pulp is not of uniform quality, and if the stuff pump is driven off the grinder shaft, the regulation of the stock is not an easy matter.

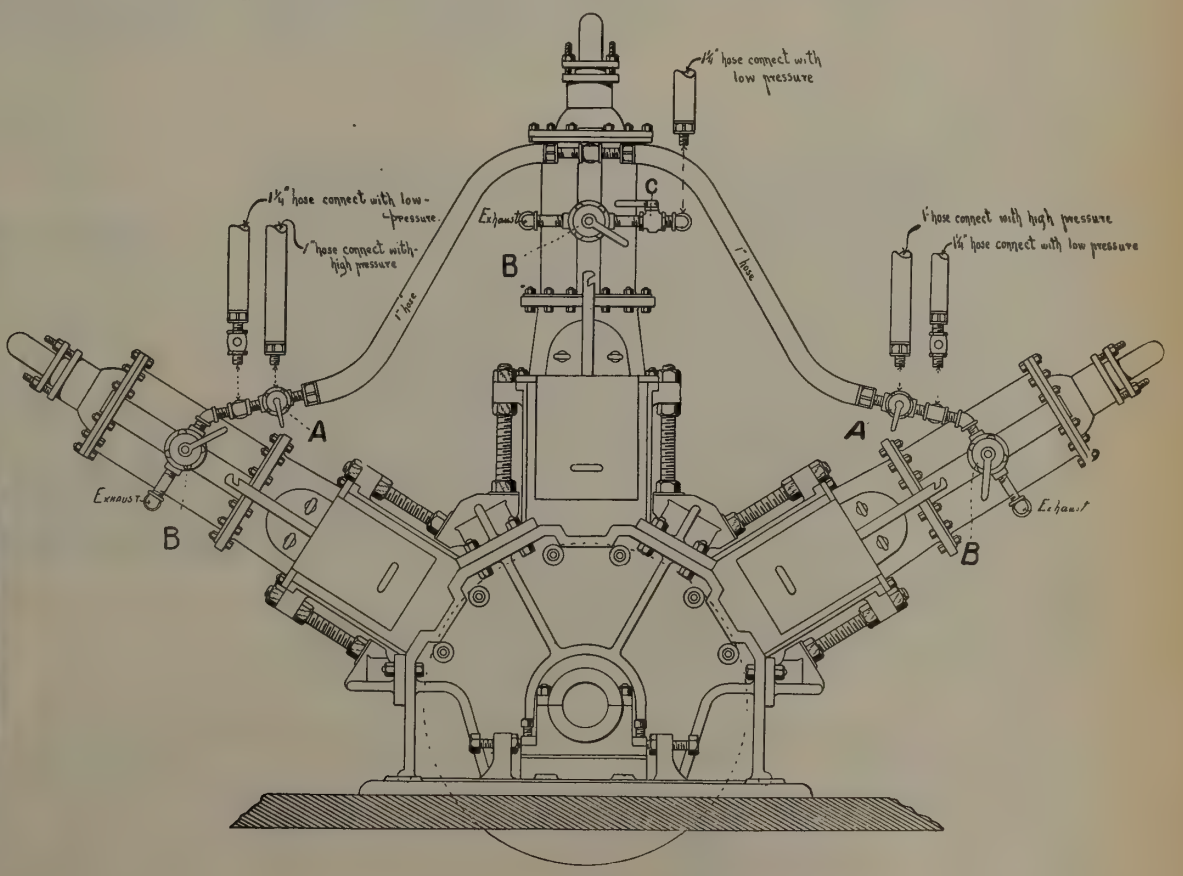

Fig. 7—Port Henry Wood Pulp Grinder (side view).

Mr. William Craddock, of Huntsville, Ont., has recently been given a contract for twelve car loads of broom handles to be shipped to Liverpool, Eng.

## PULP NOTES.

It is rumored that a pulp mill is to be erected at Bathurst, N.B. T. D. Adams, of the firm of Adams, Flannigan & Co., New York, is said to be the promoter.

The Thunder Bay Pulp and Manufacturing Company is applying for an Ontario charter, with a capital stock of $1,000,000. Mr. Hugh Blain, of Toronto, is one of the promoters.

Captain Partington, of Liverpool, Eng., has agreed to take two-thirds of the stock in the proposed pulp mill at Union Point, near St. John, N.B. This assures the building and operation of the mill.

D. S. Maxwell, C.E., has secured, for a company of New York capitalists, options on several water powers on the St. Croix river, in New Brunswick. It is understood that the intention is to erect a pulp mill.

The following is from the pen of the West Hartlepool correspondent of Timber, of London, Eng: "Pulpwood is in good demand; the competition of Canadian wood with the Baltic production is very strong in this district just now, and the Swedes will have to look sharply after this trade or it will be leaving them."

Statistics to hand show that the consumption of wood pulp by British papermakers continues to increase. During the year 1898 there were imported 404,827 tons, against 388,000 tons in 1897. The respective values were £1,939,761 and £1,894,328. It will therefore be noted that whilst the quantity imported last year was larger than in 1897, the value shows a depreciation. Norway supplied, in 1897, 239,132 tons; Sweden 93,620 tons; and Canada, the third in importance, 25,873 tons.

## ESSENTIAL TO THE LUMBER BUSINESS.

Mr. John Nichol, jr., of Queensboro, Ont., in renewing his subscription to the CANADA LUMBERMAN, writes: "Anyone interested in the lumber business cannot afford to be without it."

## CROWN LANDS OF QUEBEC.

THE report of the Commissioner of Lands, Forests and Fisheries of the province of Quebec for the year ending June 30th, 1898, is one of the most valuable which has yet been issued by that department, containing much special information regarding the timber lands, water powers and natural resources of the province. The total receipts of the department for the year were $1,087,042.52. There were collected on account of woods and forests $911,088.30, which included the proceeds of the sale of 1,215 miles of timber limits, which was held on March 22nd, and which realized $30,110.48.

Some interesting comparisons relating to the woods and forests branch are made by the Commissioner. On June 30th, 1868, the number of superficial miles under license for the cutting of timber was 17,997. On June 30th, 1898, it was about 46,864 miles. The ground rents in 1868 yielded $22,401 and in 1898 $148,935. The lumber dues in 1868 was $65,381 and in 1898 $713,435. The total collections for the two years named were $195,115 and $911,099.30 respectively.

The proceeds of an important public sale held in 1868, covering an area of 5,664 miles of timber lands of the Upper and Lower Ottawa and the St. Maurice rivers, amounted to $72,685, or an average of $12.84 per mile. At the sale in March last there were realized, for 1,216 miles of timber lands situated to the north and south of Lake St. John, and in the county of Saguenay, the sum of $30,110, or an average of $24.77 per mile.

It is pointed out that new fields have opened up, and that the demand created by the manufacture of pulp and paper gives value to-day to woods that were formerly regarded as of very secondary worth. A report by Mr. J. C. Langelier, superintendent of forest rangers, gives a good idea of the value of wood lands in the Lake St. John region suited to the manufacture of pulp. In a future issue we hope to publish some extracts from this report.

The following statement shows the quantity of the various kinds of timber cut in the province during the year ending June 30th, 1898:

| | | |
|---|---|---|
| Pine, at dues of $1.30 per M feet | 268,419,035 | feet B.M. |
| Small pine logs and red pine, at 80 cents per M feet | 73,483,682 | " |
| Spruce, at 65 cents per M feet | 371,628,571 | " |
| Boom timber | 136,450 | " |
| White pine timber | 1,255,064 | cubic feet. |
| Red pine timber | 36,036 | " |
| Birch timber | 74,514 | " |
| Cedar | 166,207 | lineal feet. |
| Pulpwood | 4,452 | cords. |
| Small logs | 1,475 | " |
| Railway ties | 204,847 | pieces. |
| Spruce culls | 609,359 | feet B.M. |
| Pickets | 10,080 | pieces. |
| Telegraph poles | 7,634 | " |

In addition to the above, there were manufactured small quantities of shingles, fence posts and rails. The timber dues collected amounted to $713,435.86, the ground rents to $148,955.18, and the bonuses to $30,110.48.

Mr. W. J. Cummings, Spencerville, Ont., writes, regarding the CANADA LUMBERMAN: "I am well pleased with it; it keeps me posted."

## VALUABLE TO MILLMEN.

Mr. J. R. Gettler, Fullarton, Ont., in renewing his subscription to the CANADA LUMBERMAN, writes: "I would not wish to be without it, as I consider it a very valuable journal for millmen."

The John Sykes Mining & Milling Co., of Toronto, have purchased from the Jenckes Machine Co., Sherbrooke, a ten-stamp mill, engine, boiler, and saw and shingle mill, to be erected immediately on their property near Dinorwic, Ont.

The High Commissioner at London has received a communication from a firm wishing to correspond with Canadian manufacturers of elm, basswood, and oak mouldings. Mr. Harrison Watson, of the Imperial Institute, in a letter to the Department of Trade and Commerce, states that there is an increasing demand in Great Britain for boot and shoe pegs. These have heretofore been obtained from the United States, being put up in barrels containing 3½ bushels each. The large dealers purchase about one hundred barrels at a time.

The Hammond Reef Gold Mining Co., Toronto, have decided to install at once thirty additional stamps, a new crusher, aerial tramway and water power plant, to operate their new mill. It is expected that the whole of the machinery will be delivered early in April. The Jenckes Machine Co., Sherbrooke, have been awarded the contract.

**The LUMBERMAN is issued fifty-two times a year for $1.00. Can you afford to do without it?**

## WHAT AN ADVERTISEMENT SHOULD BE.

MR. Frank A. Munsey, in an address before the Sphinx Club of New York on "Advertising in Some of its Phases," says: There are just two things to be kept in mind in the preparation of an advertisement—first, something to fix the reader's attention upon your particular advertisement, and second, the talk to the reader. What you say, your argument, your talk to the reader, should be attractively set, plain, neat, simple, short sentences and short paragraphs, and large clear type, well leaded. Cramped space does not give scope for well-set advertisements containing any considerable argument. Fine type closely packed together is unattractive, forbidding, and suggestive of hard work. The reader does not want hard work; he wants good easy reading—reading so easy, so attractive, so alluring, that he slides down a page without having intended to read it at all; but once having read it, it matters not what his intention was, the advertiser has got in his deadly work. He has begun to make himself known to that particular reader, and has laid the foundation for future intercourse.

Advertise in the CANADA LUMBERMAN.

# WHY?

Pay for four or five tons of unnecessary iron in buying a Saw Mill when less than one ton will do the work; save you in original cost; give you better lumber; save wear and tear in your shafting, &c. (pulling the heavy load), and save the power of your engine.

Our Mills will accomplish this.

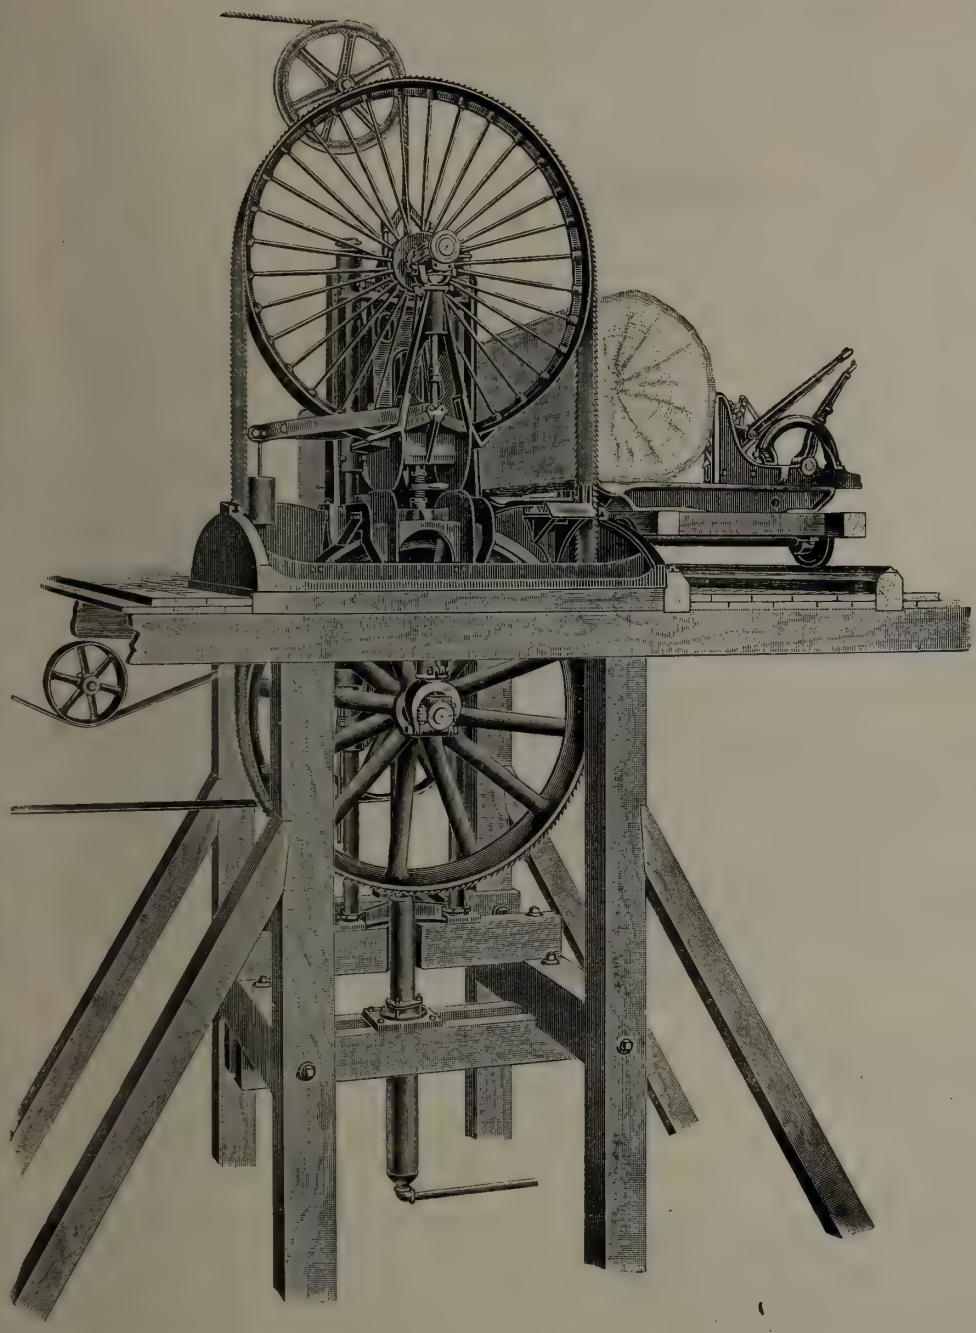
# Madison Williams

Successor to PAXTON, TATE & Co. - PORT PERRY, ONT.

LAURIE ENGINE CO., Agents, 321 St. James St., Montreal.

# Double Cutting Band Mill

PATENTED IN CANADA



THE New Allis Telescopic Band Mill has passed the experimental stage, and after running day and night for six months, is pronounced by competent saw mill men to be a perfect success as to the quality of its work and practicability as a machine. By the use of our **Double Cutting** Band Mill a gain of 50 per cent. in the amount of lumber cut is made by the addition of two men to the regular crew.

We are now building Telescopic Band Mills for

**J. D. Shier,** Bracebridge, Ont.;

**Rat Portage Lumber Co.,** Rat Portage, Ont. ;

And the E. P. Allis Company are building Telescopic Band Mills for the

**Bodcaw Lumber Co.** of Stamps, Ark.;

**Jeanerette Lumber and Shingle Co.,** Jeanerette, Louisianna.;

**Arizona Lumber and Timber Co.,** Flagstaff, Ariz.;

**R. J. & B. F. Camp,** of White Springs, Fla.

The advent of the New Allis Telescopic Band Mill, which is creating such a revolution in the manufacture of lumber, is the cause of considerable discussion among saw mill men as to the practicability of the band saw cutting on both edges and making lumber of a uniform thickness.

In regard to this, we wish to announce that six months of constant use have demonstrated the fact that the double toothed band saw will cut equally as well with one edge as with the other. It has also been proven that with the adjustments provided on the Telescopic Band Mill, lumber can be cut of a uniform thickness in both directions and taken care of without loss of time or at any disadvantage. It has also been shown that the double toothed band saw is a safer saw to operate than the single toothed saw, on account of its ability to cut its own clearance in either direction through slivers or other projections on the logs that catch the ordinary saw and back same off the wheels. It has also been demonstrated that advantages are to be gained by avoiding the use of an offset on the carriage.

The use of the **Double Toothed Band Saw** and all the advantages to be gained therefrom have been made possible by the invention of the **New Allis Telescopic Band Mill,** which is fully described and illustrated in our circular, which we will gladly mail on application.

☞ **Orders for Band Mills and Saw Mill Machinery should be placed at once if early shipments are desired.**

## Waterous Engine Works Co., Limited

BRANTFORD, - CANADA.

# R. H. SMITH CO., LIMITED

## St. Catharnies, Ont.

We are the Sole Manufacturers of Saws under the

## Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

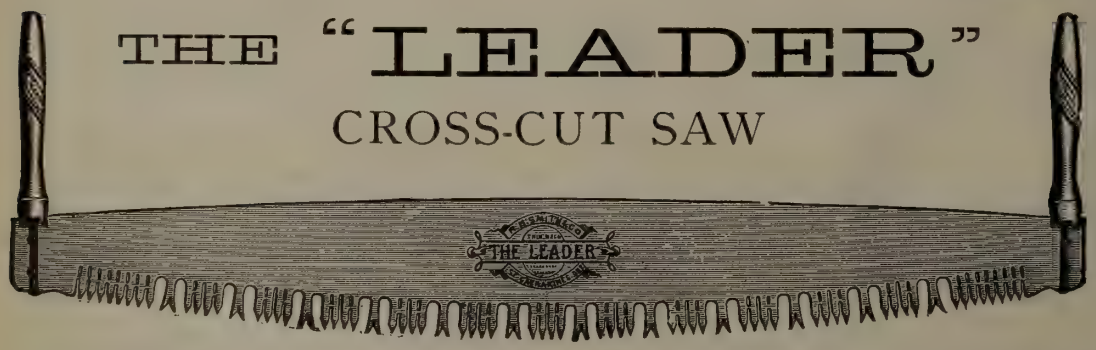
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.

## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## THE "LEADER" SAW SWAGE

**Made in 3 Sizes—$2.00, $2.50, $3.00 Net.**

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

TAKE A PEEP INSIDE

of the Standard Kiln, and it will be easy for you to understand WHY it is the Most Perfect Lumber Drier in the World. There are other "good looking" kilns. Yes, and other "good" kilns, too; but no other kiln ever made will dry SO MUCH lumber, do it SO QUICKLY and SO THOROUGHLY, and use SO LITTLE STEAM as

The Standard Improved Compression Dry Kiln

We can prove that—by demonstration or by evidence. We will mail you the evidence of many users, if you want it. It will give you a good idea of the range and the quality of its work. Here is one firm's opinion:

OTTAWA, ONT., June 25, 1898.

THE STANDARD DRY KILN CO., Indianapolis, Ind.

GENTLEMEN,—In reply to yours of the 21st of June, I have to say that the "Compression" Kiln put in for us is "all right." It worked very nicely during the winter months, and seems to suit our Canadian climate.

Yours truly, R. THACKRAY,
Per James Davidson.

Our illustrated catalog sets forth in a very clear manner the detail of construction, and shows plainly the application of the Standard "Moist Air" theory of drying. You can have one for the asking.

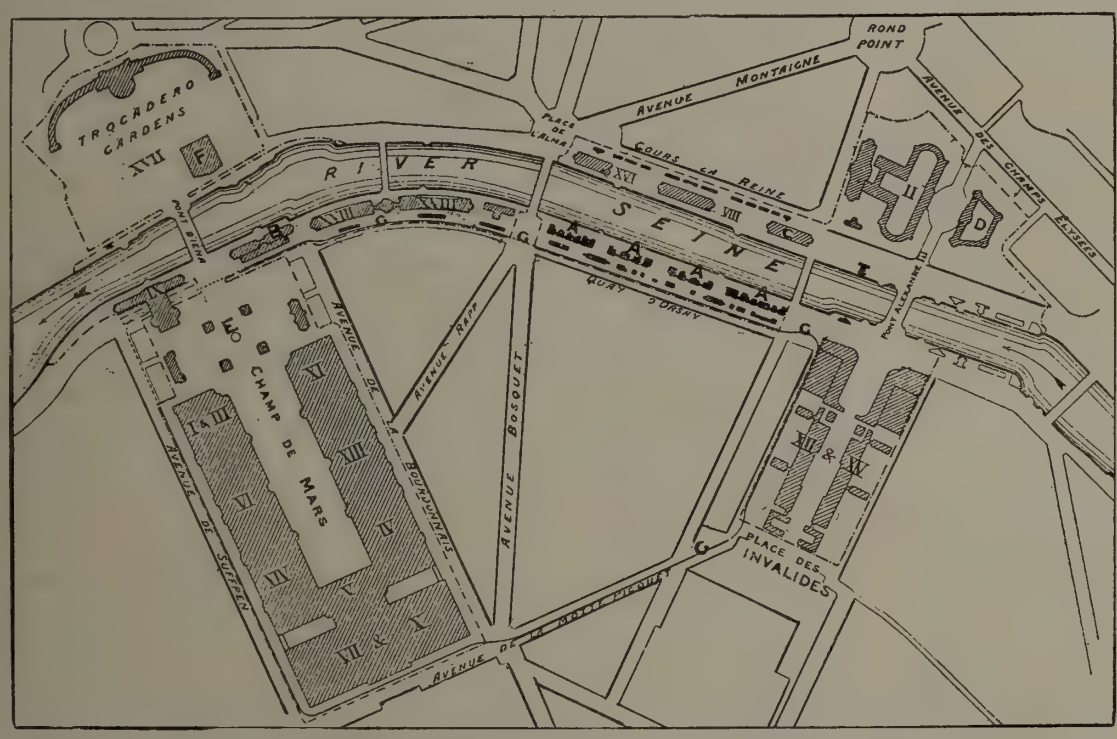
## REGULATIONS OF THE PARIS EXPOSITION.

The Canadian Commission for the Paris Exposition of 1900 have issued a booklet giving regulations, classification of exhibits, and general information for intending exhibitors. The accompanying plan, which is herewith reproduced, shows the arrangement of the Exhibition grounds and buildings, and will no doubt be found of interest. The Exhibition will open on the 15th of April and close on the 5th of November. The Colonial building will be situated on the Trocadero grounds overlooking the Champs de Mars, not far from the Great Eiffel tower, and will cover 36,000 square feet, of which 27,100 feet has been allotted to Canada.

Forms of application for space must be returned to the Canadian Commission, Department of Agriculture, Ottawa, not later than June 1st, 1899. It is the desire of the Commission to secure the best possible exhibit of Canadian goods, and there will be no charge to exhibitors for space. Accepted exhibits from Quebec, Ontario and the west must be delivered at the exhibitor's expense at Montreal or Quebec not later than November 1st, 1899, and exhibits from the Maritime provinces at Halifax, N. S., not later than November 15th. These will be shipped to Paris by the Commission free of charge. Exhibitors are expected to dispose, in Paris, of their exhibits when these have a commercial value, as only valuable collections of objects of special character will be granted free return transportation. The exhibits are divided into eighteen groups, which are again subdivided into numerous classes. The Forestry exhibit is placed in Group nine, which includes forest, sport, fishing and gathering wild crops. There are two sub-divisions relating to forestry, and numbered classes 49 and 50. Class 49 includes appliances and processes used in forestry, as follows: Collection of seeds; specimens of indigenous or exotic forest products; special implements for gathering, preparing, testing and preserving seeds; drying-houses; implements for nurseries; appliances for tree cultivation and forestry; processes of nursery culture; processes of the cultivation and management of forests; forest topography; forest works, keepers' houses, saw mills, means of removing cut timber, drainage, re-planting; terracing; planting with trees, turfing, etc.; planting for arresting the shifting of dunes.



PLAN OF EXHIBITION GROUNDS AND BUILDINGS—PARIS EXPOSITION.

Class 50 includes products of the cultivation of forests and of forest industries, namely: Specimen of all kinds of forest products; wood for cabinet work and for construction purposes; wrought wood; staves and cask wood; lath wood, wood for dyeing purposes; cork trees; bark for textile purposes; tanning, fragrant, resinous substances, etc.; products of forest industries; turnery, basket work, esparto manufacture; wooden shoes, wood wool, corks, dried woods, charcoal, raw potash, etc.

Group 14 and class 88 includes materials, plant and processes for the manufacture of paper. In this class are placed apparatus and processes for making pulp; mechanical wood pulp, grinding, purifying and drying; chemical wood pulp, semi-chemical pulp, etc.

Group 4 and class 22 includes wood-working plant, such as saws for cutting trees, for cutting up timber with the bark on, for shaping, etc; machines for squaring timber, planing machines, lathes, drilling and slotting machines; machines for making tongues and grooves, tenons and mortices; shaping and copying machines, machine fittings; machine and hand tools specially used in wood-working; machine tools which do not come under any special classification.

---

A curious instance of dwarfism in pines is recorded by C. E. Bessey, of the University of Nebraska, who states that on Green Mountain, near Boulder, Col., he found in a crevice of the rock at the summit a pine tree less than 3 inches high and 1/5 inch in diameter. It had no branches, and bore a single tuft of needles at the top. Nevertheless, it showed 25 distinct annual rings, making it presumably 25 years of age.

## THE NOVA SCOTIA LUMBER COMPANY.

The Nova Scotia Lumber Company, whose office and mills are at Sherbrooke, N.S., is about the largest operator east of Halifax. Over one year ago their saw mill was burned, and during last winter they rebuilt, and have now a very finely equipped plant for the manufacture of lumber, everything except the boilers (which were good and not injured by the fire) being new and up-to-date, thus enabling them to manufacture a greater quantity of lumber at less cost than under the conditions previously existing. The engine is a 350 h.p. Brown automatic cut-off, supplied from four large boilers about 50 feet long. The mill contains one live gang, i.e., for sawing the log in the round without first slabbing, a circular saw rig, patent edger, and the necessary trimmers, picket and lath machines and planer and matcher. The sawdust, bark and mill refuse are taken by a chain about 400 feet away from mill, where it is burned. This chain is arranged and carried through the mill so that the refuse from any part of the mill can be delivered to it directly from the different machines, in this way saving labor and keeping all parts of the mill clean. The capacity of the gang is above the average mill. On August 4th it cut 105,640 superficial feet in nine hours, and on September 13th 58,025 feet was sawn in the afternoon. The circular has a capacity of 30,000 superficial feet per day, and lath machine from 50,000 to 60,000 pieces.

The company had some 5,000,000 feet of logs held over from last year, and their output in the winter of 1897 was about 10,000,000 feet, which gave them a fine stock, but owing to the depressed markets for spruce lumber they only sawed last season about 12,000,000 feet, preferring to hold some stock for early spring sawing. They employ in the neighborhood of 100 men in their mill and yards. Equipped as they are with gang and circular, they can saw deals, timber, planks and boards to any specification. This year they have sawn principally English deals.

The company own extensive limits of the very best spruce on the St. Mary's river and its tributaries. They also own some fine hardwood timber, which eventually, if not in the near future, will be very valuable. In addition to the limits referred to, the company own a large limit at Economy and have large interests in Cumberland county, near Shulee, which they are not operating at present.

The company is composed of financially strong men, and some of them are the most practical and successful lumbermen in the eastern provinces. John W. Seaman is the manager and G. K. Prescott assistant. Hon. W. T. Pipes and Dr. Hewson, of Amherst, John Gillespie, manager of Prescott, Gillespie & Co, Shulee, and Job Seaman, Barronsfield, are members of the company.

Sherbrooke is about 140 miles east of Halifax, and very prettily situated, 6 miles up the St. Mary's river. The nearest railway station is Antigonish, 40 miles distant.

---

## IT IS GOOD VALUE.

Mr. John Stanford, of Chester, Nova Scotia, writes regarding the CANADA LUMBERMAN: "The weekly number is worth the amount to any one in the business."

## UNIFORM INSPECTION RULES FOR LUMBER.

OPINIONS ON THE SUBJECT FROM SEVERAL MEMBERS OF THE TRADE.—THE ADVANTAGES OF STANDARD RULES GENERALLY ADMITTED. — DIFFICULTIES OF THEIR ADOPTION ENUMERATED.

WITH the object of learning the views of the lumbermen of Ontario on the subject of adopting uniform rules for the inspection and grading of pine and hardwood lumber, letters of enquiry were forwarded by the publishers of this journal to several members of the trade. The questions asked therein were as follows :

1. Do you consider that the adoption of standard inspection rules would be in the interest of the lumber trade of Ontario ?

2. In what way, if any, has the absence of such rules been a disadvantage to the lumber trade in the past ?

3. Could rules be compiled which would serve all sections of the province, and apply to export as well as domestic trade ? If not, why ?

4. How, in your opinion, could the adoption of uniform rules best be acccomplished ?

5. Would you be willing to co-operate in a movement to secure standard rules?

Below will be found the answers received up to the time of going to press :

MICKLE, DYMENT & SON, Barrie : " 1. Yes. 2. Disputing qualities has given lumbermen considerable trouble. 3. We think it could be done, because then lumber would be sold according to the inspection. 4. By the Lumbermen's Association taking it up and agreeing upon the qualities. 5. Yes. "

H. CARGILL & SON, Cargill : " We would not join in a movement to secure standard rules and inspection of lumber for the Province of Ontario. Every lumberman has his own method of manufacturing and selecting his own lumber, and fixes his prices according to the quality of lumber thus selected. "

R. LAIDLAW & CO., Toronto : " It is certainly very desirable to have uniform rules for the inspection of all kinds of lumber. We are given to understand that at a meeting of the Lumbermen's Association held a short time ago, a committee was appointed to prepare rules of inspection and present them to the Board. "

THE RATHBUN COMPANY, Deseronto : " We heartily approve of bringing the rules governing the inspection of hardwood to the same standard as those existing in the United States ; in fact, we think the national rules in the United States for governing the inspection of hardwood lumber should be adopted by Canadian lumbermen. "

WHALEY LUMBER CO., Huntsville : " 1. We think standard inspection rules would be a benefit. 2. In so much difference of opinion as to goods. 3. If we had established inspection rules, foreign countries would buy according to the Canadian inspection. 4. Compare the market with the kind of lumber we produce and make the rules statutory. 5. Yes.

J. & T. CONLON, Thorold : " We are not much interested in the question, as we do not sell our lumber in cargo lots at the mill, and generally log run, the buyer doing the grading himself. Would say, however, that we would like to see a system in this country of definite uniform grades of lumber, as it would avoid many misunderstandidgs, and we hope that action will be taken in the matter."

KEENAN BROS., Owen Sound : " 1. Yes. 2. Because the quality should govern the price, and in the past each dealer and mill man, when shipping, has had to agree on the grade between themselves, instead of referring to a standard authority that both should be bound to abide by. 3. Yes ; there should be no trouble in the Province, and we could make sales as per provincial inspection, instead of having to agree on rules enforced at destination. 4. Only by the co-operation of mill men and dealers, who would both have to abide by the rules. 5. Yes. "

W. J. SHEPPARD, manager Georgian Bay Lumber Co. : " We do not consider that it is possible to adopt a standard of inspection that could be carried out by all the various lumbermen in Ontario, for the reason that we do not believe there are any two lumbermen at the present time who inspect their lumber the same. In many cases they have separate and distinct markets to supply. The grading called by the same name in one section would not at all suit the demands of another section. In buying lumber in this country, the grades shown, and the prices asked, are taken into consideration before the purchase is made. Under the circumstances, we therefore think that uniform rules could not be adopted at the present time. "

C. BECK MFG. CO., Penetanguishene : " A national rule for inspection is much needed, as up to the present time nearly everyone has had an inspection of his own, and the buyer does not know what he is buying unless he sees the lumber himself. I brought this matter up at the Lumbermen's meeting some time ago, to have a uniform inspection and grades of lumber. Mr. Toner, of Collingwood, was instructed to work out a scheme for different grades of lumber. In the North-west they have uniform inspection rules, and I sent Mr. Toner a copy of their rules to help him in his work. If national inspection rules could be made for both Canada and the United States, it would be much better, and I would be greatly in favor of it. "

LONDON LUMBER CO., London : " We are most anxious that some definite steps should be taken to put the lumber business on a proper footing. Our trade is in hardwood lumber altogether, and we are of the opinion that if the United States adopt a national rule of inspection, as proposed, that Canada should adopt a standard Canadian rule of inspection. Of course, if such a rule were adopted the quality of the products of the Canadian forests would have to be taken into consideration, and, we believe, this would apply to pine as well as hardwoods. A rule of this kind could only be adopted by co-operation. By co-operating, an act of legislature could likely be put upon the statute book. We are in favor of provincial rules of inspection, and would like to see the rules the same for the domestic trade as well as the export trade. The forests of the United States are thinning out proportionately as fast as they are in this country, and it would be an advantage to both countries to have an international inspection rule. We would be willing to co-operate to a certain extent to bring about this result. The most important question that you ask is No. 3, and we are of the opinion that if inspection rules were properly laid down, the export trade would have to take the lumber at our inspection. At the present time the business is frightfully hampered for the want of a uniform rule of inspection on the other side. Our experience is that no two houses inspect alike."

PICKARD & ROWAN, Owen Sound : " As we handle hardwoods almost exclusively, our remarks must be confined to such timber as goes under the head of hardwood lumber. We believe that so long as mill-men have their lumber go to the consumer through dealers, there is an absolute necessity for rules to go by in the buying and selling of such stock, and we do not see any reason why a uniform standard of rules would not be an advantage to all concerned. The absence of standard inspection rules have, we believe, been felt most by dealers, rather than by manufacturers, as they have frequently to sell lumber named as a certain standard, in an American market, and buy it on a Canadian market, where the standard of the same name means quite a different grade of lumber; hence, when the stock that is bought on a Canadian rules of inspection arrives at its destination, there is frequently trouble. Then there is delay in getting a settlement, sometimes expense in going to arrange same, generally a compromise, and very often a straining of business good feeling. Of course, the manufacturer has to bear a part, at least, of this expense, indirectly anyway, as the dealer has always to count on having more or less of these experiences, so long as the present conditions exist. We do not see any reason why a standard of rules could not be compiled that would be satisfactory to all sections of the province, but our experience is quite circumscribed in this respect. In reference to question 4, it is our opinion that so long as lumber is sold, bought and inspected by men, and not by machines, there will not be rules that will be strictly observed by buyer and seller. Mill-men might as well try to establish uniform rules in buying logs, and if there is any one thing on this green earth that cannot be done, it is this. If there is any project brought to our notice that we think has a chance of securing a uniform standard of rules, we would be willing to co-operate with its promoters in the securing of same. "

THE ORILLIA EXPORT LUMBER COMPANY, Orillia : " 1. Yes, most assuredly it is in the interests of the trade that such rules should be adopted. 2. The particular and most important disadvantage has been in quoting prices by letter. The holder of stock who is satisfied to call a grade by its right name, and make his price accordingly, very often suffers to the gain of he who is willing to sell one thing and supply another. 3. Rules could certainly be made which would serve to govern the trade in this Province as well as all the Provinces, and we see no reason why they could not be made to govern our export trade as well. All that would be required would be that the buyer and seller understand thoroughly that the transaction is based on some certain rules of inspection. 4. By the formation of an Association for the express purpose of making rules governing the inspection, and securing a sufficient number of manufacturers and dealers as members to insure said association sufficient strength to protect its members. It would be also well to have some licensed inspectors, said license to be given after the inspector had qualified a board of examiners. Then, in case of dispute between buyer and seller, one of these inspectors could be called on to make an inspection and make affidavit as to its correctness, when the matter, as far as the quality of the lumber was concerned, could be considered as settled. If the American lumbermen succeed in establishing national rules, it would be well, since we trade so largely with them, that the rules were as nearly like theirs as our surroundings and conditions permit. 5. Yes ; we will be most pleased to do all we can towards establishing such rules, and feel that we cannot get them too soon."

MACPHERSON & SCHELL, Alexandria : " 1. We would decidedly agree to endorse standard inspection rules applying to this country, and if the rules applied to, or corresponded with, the national inspection rules of the United States, so much the better. 2. The absence of inspection rules in Canada has not operated against the Canadian trade generally, nor in any case where the American inspection or New York inspection is understood. In many cases where an order may be placed, (such for instance, as the following : 100,000 ft. of 1sts and 2nds basswood, 7½" wide x 12/16 feet long) if the party selling does not understand the rules, he will find the buyer is entitled to call for every inch of the order absolutely clear, as there are no firsts in the lot, nor can there be, and seconds in this width must be clear. In such cases, unless the mill-man fully knows the inspection rules of New York, he is misled by the term firsts and seconds, and the deal may cause disputes to arise. Well understood inspection rules would prevent this state of affairs. In this connection, however, we would suggest that there should be established some authority of a legislative nature, by which any set of rules would be established upon a higher plane than at present obtains in the trade. 3. We think rules could be compiled to meet the requirements of this question, if our dealers and mill-men would sell only according to such established rules both locally and for export, and in case of export bills make the contract unimpeachable by the buyer, if legislative authority conferred a license upon authorized cullers, who could be asked to inspect shipments and issue certificates. This may be objected to as expensive, and in such cases may result in shippers taking the risks they now must do with no authorized cullers. 5. Yes. "

J. E. MURPHY, Hepworth Station : " While I believe that such legally recognized rules as could be so defined as to be readily and intelligently understood by others, as well as the practically trained lumbermen, would be desirable, particularly to the pine trade, I do not believe that such rules could be readily applied to the hardwood trade. The market requirements in hardwoods are so numerous and so varied that while rules of inspection could be applied in one case, there would be several others in which like rules would not apply. Inspection rules as now adhered to allow so many knots to a board or plank of a certain width in hardwood, and if the number of knots should exceed what the rules call for, the board may be rejected. Now, while knots are as a rule undesirable defects, there are very many uses to which hardwood is put where sound knots do not interfere with the utility of the lumber. I would far quicker reject a piece of clear hardwood with cross-grain than I

would for an extra sound knot or split, if otherwise all right. First and second hardwood rules call for 6" and up wide. Now, what intelligent consumer of hardwood would reject a sound strip of maple three inches wide, when the lumber under inspection is going into a planing mill to be manufactured into flooring. The same thing would apply to soft elm going into a chair factory to be resawed into chair stock. A hardwood saw mill making lumber for the market to be graded first and second, and buying logs in competition with a chair factory in a hardwood locality, or in fact any wood-working industry, could not long continue to be a paying investment for its owner. The tendency now on the part of the hardwood lumber manufacturer is to sell his output mill run. You can scarcely induce a hardwood man to sell his lumber this season common and better, and it is almost impossible to buy firsts and seconds. This is due to the great difficulty in obtaining a market for the lower grades. Of course, I do not wish to be understood as opposed to intelligent rules of grading and inspecting hardwoods for market; in fact, I would be in favor of it. Then let the hardwood men thoroughly understand the rules of grading and put a proper price on their higher grades, which I contend should be high enough to leave the lower grades on the manufacturer's hands at no greater cost than the labor of repiling and caring for the rejects until a market could be obtained. The existence of rules of inspection would be all right for export lumber in hardwoods, and would not prevent our local consumers buying mill run or common or better if it suited their purpose. For years past there has been a lack of sympathy between the price of hardwood lumber and the inspection thereof. I am speaking from personal knowledge of facts. The ruling price for maple, beech, birch and elm for several years past, for New York, Boston, Baltimore and other eastern markets, has been from $12 to $14 per M on cars at point of shipment, according to thickness, New York inspection. Now, I can vouch for the inspection being close and meaning good lumber, but I would not object to that if the price was equally good. No man can afford to put a force of men and teams into a hardwood limit and take out hardwood and sell at such prices without becoming financially involved. When prices of high grade hardwood advance 50 per cent. I will hold up both hands for rules of inspection."

## CONVENTION OF WHOLESALE LUMBER DEALERS.

The seventh annual convention of the National Wholesale Lumber Dealers' Association, which embraces the leading wholesale dealers in the Eastern States, opened in Boston on March 1st. The roll call showed that there were 105 members present, and in addition there was a representation of about 35 from retail dealers' associations. These retail dealers had been invited by the wholesalers to represent their separate associations for the purpose of conferring over subjects of mutual concern to both branches of the business, and, if possible, of creating closer relations between the wholesalers and retailers.

The president of the association, Mr. John N. Scatcherd, of Buffalo, in his opening address, congratulated the members upon the return of prosperity, and upon the fact that a better feeling was manifested between the different branches of the trade. Mr. Eugene F. Perry, Secretary, outlined the work of the past year. He showed the membership on March 1st to be 215, representing a gain of fourteen during the year.

The business transacted at the convention may be divided into three sections—first, the establishing of better relations between the wholesale and retail trade; second, the formulating of a system of discount and time to best serve the lumber trade; third, the adoption of hardwood inspection rules.

In connection with the first question, the Committee on Trade Relations presented a lengthy report which, stated that the creation of the committee had been decided upon on account of representations made by certain wholesale dealers in North Tonawanda, who contended that they had suffered in both volume of trade and percentage of profits by competition from scalpers. The report stated that one great cause of friction between the wholesale and retail associations was the classification of the trade, but this was being gradually overcome by the adoption of a plan of a joint final classification.

The report of the Board of Managers of the Bureau of Information was read by the secretary. It stated that a feature of the year's administration was the inauguration of a special system of reports upon dealers who had contracted the habit of making settlements to suit themselves, ignoring either regular or agreed terms of sale.

The retail dealers, after a conference, submitted a report to the association, which provided that the latter take up and formulate rules to classify the trade into three sections, as follows: 1st, manufacturers; 2nd, wholesale dealers or agents; 3rd, retail dealers or legitimate trade for wholesale dealers to sell to. The report also recommended that the National Wholesale Dealers' Association take up and consider the recognized evils from which both branches of trade are suffering, viz., sales by manufacturers and wholesalers to consumers; sales by brokers, agents and commission men to consumers; sales and quotations by so-called retail dealers to consumers, through agents, and by methods used by the wholesalers in soliciting trade from retailers. The retail dealers pledged themselves to buy their stock, as far as possible, from members of the National Lumber Dealers' Association, and the latter agreed not to sell direct to the consumer. The report submitted by the retail dealers was unanimously adopted.

Mr. Charles Hill, of North Tonawanda, introduced the subject of establishing regular terms of sale, the discussion on which indicated some difference of opinion between the pine and hardwood trade as to the date from which settlements should be dated. It was finally resolved that in the absence of other arrangements between buyer and seller, the terms of sale in the wholesale trade should be as follows: Freight, net cash when lumber is delivered; balance, either 1½ per cent. off for cash within fifteen days from date of invoice, or bankable paper, sixty days from date of invoice.

The Committee on Hardwood Inspection, of which Mr. M. M. Wall, of Buffalo, is chairman, submitted a report recommending the adoption of the inspection rules of the National Hardwood Lumber Association, and the appointment of a committee to confer with that association to secure such modifications as may be necessary to the end that a uniform national inspection be established. These recommendations were unanimously adopted.

The Nominating Committee, consisting of Messrs. E. C. Grant, R. B. Wheeler and Alfred Haines, submitted the names of the following gentlemen to serve as trustees during the ensuing three years: John N. Scatcherd, Buffalo, N.Y.; Robert C. Lippincott, Philadelphia, Pa.; C. M. Smith, North Tonawanda, N.Y.; W. C. McClure, Duluth, Minn.; L. H. Shepherd, Boston, Mass. These gentlemen were elected without opposition.

On Wednesday evening the visiting lumbermen were tendered a banquet at Young's Hotel by the New England Association of Lumbermen, at which there was a large attendance and much brilliant speech-making.

Following the adjournment, the trustees re-elected the board of officers, which is as follows: President, John N. Scatcherd, Buffalo; 1st vice-President, Robert C. Lippincott, Philadelphia; 2nd vice-President, C. H. Bond, Oswego; Treasurer, Frederick W. Cole, New York; Secretary, Eugene F. Perry, New York; General Counsel, John Jay McKelvey, New York.

### WHOLESALE DEALERS REPRESENTED.

The following wholesale firms, who are members of the association, were represented at the convention:

Atlantic Lumber Company, Boston, Mass.
Badger & Winslow, Boston, Mass.
Owen Bearse & Son, Boston, Mass.
C. M. Betts & Co., Philadelphia, Pa.
Boston Lumber Company, Boston, Mass.
Buffalo Hardwood Lumber Company, Buffalo, N.Y.
Buffalo Maple Flooring Company, Buffalo, N.Y.
Briggs & Cooper, Saginaw, Mich.
E. P. Burton & Co., Philadelphia, Pa.
W. R. Butler & Co., Boston, Mass.
E. P. Chapel, New York.
Chequasset Lumber Company, Boston, Mass.
Cleveland Saw Mill & Lumber Co., Cleveland, O.
F. W. Cole, New York.
Crosby & Beckley Company, New Haven, Conn.
R. B. Currier, Springfield, Mass.
Cypress Lumber Company, Boston, Mass.
John E. DuBois, Philadelphia, Pa.
Dwight Lumber Company, Detroit, Mich.
Eddy-Sheldon Company, Bay City, Mich.
C. K. Eddy & Sons, Saginaw, Mich.
Empire Lumber Company, Buffalo, N.Y.
Emporium Lumber Company, Buffalo, N.Y.
L. H. Gage Lumber Company, Providence, R.I.
Haines & Co., Buffalo, N.Y.
E. B. Hallowell & Co., Philadelphia, Pa.
Hall & Munson Company, Bay Mills, Mich.
W. S. Harvey, Philadelphia, Pa.
Jones & Witherbee, Boston, Mass.
B. F. Lamb & Co., Boston, Mass.
Lawrence & Wiggin, Boston, Mass.
Litchfield Bros., Boston, Mass.
R. C. Lippincott, Philadelphia, Pa.
H. M. Loud & Sons, Buffalo, N.Y.
Hugh McLean & Co., Buffalo, N.Y.
Millard Lumber Company, New York.
Montgomery Bros. & Co., Buffalo, N.Y.
Northwestern Lumber Company, Eau Claire, Wis.
Noyes & Sawyer, Buffalo, N.Y.
Ottawa Lumber Company, Ottawa, Ont.
Peart, Nields & McCormick Co., Philadelphia, Pa.
Pease Lumber Company, Springfield, Mass.
Rib River Lumber Company, Toledo, O.
Rice & Lockwood Lumber Company, Springfield, Mass.
Chas. S. Riley & Co., Philadelphia, Pa.
W. H. Sawyer Lumber Company, Tonawanda, N.Y.
Scatcherd & Son, Buffalo, N.Y.
Shepard, Farmer & Co., Boston, Mass.
Shepard & Morse Lumber Company, Boston, Mass.
C. R. Shuttleworth, Buffalo, N.Y.
Smith, Fassett & Co., Tonawanda, N.Y.
E. A. Smith & Co., Providence, R.I.
E. A. Souder & Co., Philadelphia, Pa.
Stetson, Cutler & Co., Boston, Mass.
Swan-Donogh Lumber Co., North Tonawanda, N.Y.
Taylor & Crate, Buffalo, N.Y.
H. M. Tyler Lumber Company, Tonawanda, N.Y.
Underhill & Poole, Buffalo, N.Y.
United Lumber Company, Springfield, Mass.
H. D. Wiggin, Boston, Mass.
White, Rider & Frost, Tonawanda, N.Y.
Wiley, Harker & Co., New York.
R. B. Wheeler & Co., Philadelphia, Pa.
Weston & Bigelow, Boston, Mass.
Euegene F. Perry, New York.
John Jay McKelvey, New York.
E. True Bennett, Hardwood Lumber Company, Memphis, Tenn.

## AN ATTRACTIVE CATALOGUE.

In the illustrated catalogue No. 45, issued by the Standard Dry Kiln Co., of Indianapolis, Indiana, and just to hand, we find much of interest regarding the principle of drying by moist heat, the method which it is claimed is scientifically applied only in the Standard dry kiln. In addition to several illustrations and photographic views, there appear numerous commendatory letters from customers who have given the Standard dry kiln and the steel roller bearing trucks a trial. These include some of the largest woodworking firms in the United States and Canada, including J. A. Sayward, of Victoria, and the Pacific Coast Lumber Co., of New Westminster, B. C.

## PERSONAL.

Mr. John A. Bertram, son of Mr. John Bertram, president of the Collins Inlet Lumber Company, has opened an office as lumber inspector and shipper in the Land Security Chambers, Toronto.

The lumber trade will sympathize with Mr. Wm. Thompson, president of the Longford Lumber Co., in the death of his wife, which took place on March 4th. Mrs. Thompson was but thirty-two years of age.

Mr. S. P. Benjamin, lumber manufacturer, of Wolfville, N. S., returned last month from a three months' business trip to Cuba and other West India islands. Mr. Benjamin looks for increased trade between Canada and these islands.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## FACTS WORTH CONSIDERING.

A FEW years ago mention was rarely made of the fact that lumber was imported into Canada from the United States; the quantity was then of little account. Simultaneously with the settlement of our western country, changed conditions have arisen, and to meet these a re-adjustment of our business relations with the United States is necessary. A duty having been placed upon Canadian lumber imported into the United States, it is proposed to place a similar duty upon lumber and other timber products imported into the Dominion from that country. This fact lends additional interest to the statistics just to hand of the timber exports from the United States for the last fiscal year. It can safely be assumed that the lumber trade of Canada, as well as the general public, underestimate the quantity of wood products of American manufacture that find a market within our borders. The figures given below of the imports for the last fiscal year, as compiled from the Treasury Department statistics, will assist a better understanding:

TIMBER AND UNMANUFACTURED WOOD, SAWED.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick... | 2,443,000 | $ 28,624 |
| Quebec, Ontario, etc..... | 10,003,000 | 139,523 |
| Total..... | 12,446,000 | $168,147 |

TIMBER AND UNMANUFACTURED WOOD, HEWN.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick.. | 17,285 | $ 2,530 |
| Quebec, Ontario, etc..... | 2,406,344 | 737,149 |
| Total..... | 2,423,629 | $739,679 |

BOARDS, DEALS AND PLANKS.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick . | 2,245,000 | $ 40,880 |
| Quebec, Ontario, etc..... | 67,900,000 | 963,263 |
| British Columbia..... | 2,252,000 | 16,714 |
| Total..... | 72,397,000 | $1,020,857 |

JOISTS AND SCANTLING.

| | Feet. | Value |
|---|---|---|
| Nova Scotia and New Brunswick .... | 290,000 | $ 3,115 |
| Quebec, Ontario, etc..... | 7,030,000 | 70,761 |
| Total..... | 7,320,000 | $73,876 |

SHINGLES.

| | | |
|---|---|---|
| Ontario and Quebec ..... | 7,312,000 | $10,250 |
| British Columbia..... | 5,590,000 | 7,365 |
| Total..... | 12,902,000 | $17,615 |

It will be observed that the exports of lumber to Manitoba and the Territories, which last year represented thirty-eight million feet, are not mentioned in the above statistics, although it is possible that they may have been taken into account in conjunction with the products of some of the other provinces. Granting this, we find the total exports to Canada of timber and lumber as shown to be, approximately, ninety-five million feet, having a value of over two million dollars. But it is improbable that these statistics are complete, as government figures of this character do not usually represent accurately that for which they are intended, frequently falling short of the actual total.

That timber products to the value of over two million dollars were freely admitted into Canada in one year, while a duty was exacted on every board going into the United States from Canada, is a fact which cannot become too widely known in this country. We are too apt to regard our importations as an insignificant quantity, and thus in our ignorance to allow the United States to exploit our home market, while at the same time excluding us from theirs. It is of interest to compare the lumber imports of the two countries. As stated above, Canada imported from the United States last year timber and lumber to the value of two million dollars, while in 1896, the last year of free lumber, the United States imported from Canada lumber to the value of between eight and nine million dollars. Since the imposition of the duty, the quantity imported by the United States has been reduced, and were the complete returns for 1898 available, we believe they would show a substantial decrease in comparison with the year 1896. The relation which our lumber imports from the United States bear to our exports to that country is a question which might well receive greater attention, and which has been overlooked very largely in the past.

Reverting to the Treasury Department statistics, we observe that Great Britain was the best customer for boards, planks and deals, taking 123,425,000 feet, but that Canada ranks second, taking over half that amount, or 70,145,000 feet. For timber and unmanufactured wood, hewn, Canada stands first among the customers of the United States, Great Britain coming second. Canada ranks sixth as a purchaser of timber and unmanufactured wood, sawed, second as a purchaser of joists and scantling, and third as a purchaser of shingles. These classifications show the importance of the Canadian market to the United States lumbermen so far as their export trade is concerned.

The Dominion parliament, now in session, is not likely to adjourn without passing important legislation looking to the protection of the lumbering industry, and, consequently, to the country at large. This will be done by placing an import duty on United States lumber and an export duty on pulp wood.

## NEED OF UNIFORM INSPECTION RULES.

THE movement in the United States towards securing uniform rules for the inspection of lumber has been advanced another step by the adoption by the National Wholesale Dealers' Association of the rules compiled by the National Hardwood Dealers' Association. That an association such as the above, composed of the leading wholesale dealers of the Eastern States, should have accepted these rules, must influence smaller organizations in the same direction, and be regarded as a strong factor in the ultimate success of what is intended to be accomplished, namely, their universal adoption.

It must be admitted that the position of the lumber trade in the United States, so far as uniform rules are concerned, is vastly superior to that of the trade in Canada, and particularly in Ontario, where standard rules are almost unknown. In Quebec and New Brunswick the inspection of spruce lumber is fixed by statute, but the rules are so general in character and indefinite as to be of little value, and are used only for export trade. To a large extent every mill man makes his own inspection, and sells his production either upon its reputation or after having it inspected by the buyer. In Ontario there are no inspection rules in existence, those adopted by the Toronto Board of Trade having long since become obsolete.

Elsewhere in this number are given the views of some members of the lumber trade in Ontario regarding the adoption of uniform rules. The advantages of such seem to be quite generally admitted, although in one or two instances one can almost read between the lines that the consequent readjustment of trade is not regarded favorably, while others doubt the feasability of adopting standard rules. There is more enthusiasm evinced by the hardwood dealers and manufacturers than by the pine men, perhaps due to the fact that they have suffered greater loss and annoyance in the past through the absence of proper rules of inspection. The buyer of lumber, in order to feel reasonably safe in making a quotation, must first inspect the stock, as one mill man may, in his judgment, class as firsts or seconds that which another mauufacturer would regard as common. With uniform rules this would not be necessary in all instances, and the sale and purchase of lumber would be greatly facilitated and the cost to the buyer reduced, thus enabling him to pay a higher price to the manufacturer.

The Ontario Lumbermen's Association recognize the necessity of a more systematic grading of lumber, and have appointed a committee to prepare a set of rules. These will no doubt apply more particularly to the production of the Georgian Bay district, and may not be sufficiently comprehensive to be accepted as provincial rules. In any case, we welcome them as indicative of a progressive movement, and in the hope that they may ultimately lead to the adoption of standard inspection for the province by statutory law or by the universal approval of the trade.

## INTERIOR FINISH.

It is not necessary to go out of Canada to procure handsome woods for interior finishings. For dark woods we have walnut, cherry and black birch, and for medium woods we have several of the oaks—white, red and black—which, when quarter sawn, equal, when properly finished, any oaks in the world for fineness and variety of grain and color. Then we have the despised butternut, three or four kinds of ash, the elms, whitewood, basswood and white pine. Cherry, grown on low loamy land, is the peer of mahogany, and is passed off for that wood as often as it passes for cherry. It has a fine silky grain, and, if properly sawn, is veined as richly as mahogany, and will take a finish equally as well. Unlike mahogany, however, it is apt to warp and twist out of shape if not held in position It is an excellent wood as a veneer on good pine cores. It may be easily darkened by staining the filler with some spirit stain before applying.

Black birch is almost as fine a wood as cherry, and takes a finish nearly as well. As a rule it is easier worked than cherry, does not cost as much, will last as long, and makes a very handsome finish. Birch may be stained almost as dark as rosewood by using a spirit stain before filling and then staining the filling. It can be polished until it is as glossy as a polished mirror. White oak, quarter-sawn and well-seasoned, makes on the whole the most durable and the most effective finish for rooms that are often used, or for halls or public rooms; and it has the quality of improving with age, something which cannot truthfully be said of many other woods. It is always better left in its natural color, which at first may be a little harsh, but it soon tones down to a soft, pleasing tone that is soothing to the artistic eye. Any of our oaks may be employed for trimmings, panel work, stairs, turned work, veneers, flooring or fitments of any kind. They are strong, durable and safe and not very difficult to work. Ash makes excellent chamber finish; it is bright, cheery, fantastic in grain, strong, and is not apt to get distorted or out of shape. It also makes excellent fittings for kitchens, pantries and similar work. Black ash has a grain similar to chestnut and takes stain readily. Furniture made of this wood and stained to imitate antique oak is often passed off as the latter to unsuspecting purchasers. It is a good wood to stand wear, and is especially suited to farm dwellings.

Another Canadian wood that is seldom used in interior finishing is our beech. This wood, when properly filled and polished, has a very pleasing appearance, as it possesses a satiny glow and warmth that is quite charming. As a material for floors, beech ranks in the same class as maple. It is nearly as hard, is some darker and wears just as well. In the lighter woods nothing excels our white maple. This equals the much-extolled satin-wood, both as regards the fine grain and susceptibility of finish; and our bird's-eye or mottled maple equals any light wood in the world in beauty, and it can be polished as smoothly as ebony. Butternut, basswood, elm and white cedar make good material for ordinary work. Butternut, when properly fitted and finished, makes a good showing and serves well in library or parlor, though not as well suited for such work as oak. White pine is the king of soft woods; it is at home anywhere, and, if finished in its natural state, shellacked or varnished properly, shows up a soft golden glow that is unsurpassed by any other wood. Some of the woods of British Columbia are well adapted for interior finishings, while the coarser kinds make excellent framing timber, scantlings, joists, rafters, etc., etc. There is plenty of timber to satisfy all Canadian requirements within our own boundaries, and it is foolish and wasteful to import foreign woods for interior finishings.

## EDITORIAL NOTES.

The Michigan lumber manufacturers pretend to believe that the manufacturing clause relating to timber will not be allowed to take effect, but that it will be vetoed by the Dominion government. In the face of this pretense, we read that a Mr. Graves, who has for years operated a shingle mill in Michigan, is preparing to build a mill on the Spanish river, Algoma district. This is a forecast of what may be expected when our Michigan friends realize to their own satisfaction that the law is on the statute books of Ontario to stay.

It has not been learned that any steps have as yet been taken by Canadian lumbermen to make a forestry display at the forthcoming Paris Exposition, although goods intended for that purpose must reach Montreal by November 1st of this year. It is improbable, however, that the opportunity thus afforded will be disregarded. Whatever is done by the government should be supplemented by exhibits by individual lumbermen, or by the united efforts of the trade, so that the immense timber resources of the Dominion shall be fairly represented. The distribution, at the Exhibition, of literature descriptive of ou forest wealth might also prove of advantage to this country.

There is, beyond a doubt, a great future for the pulp industry of Canada. If we are to judge by the number of pulp mill projects now being exploited, a wonderful growth of the industry will be witnessed within the next few years. In New Brunswick, two mills are under construction at St. John, and at St. Stephen, Bathurst and Fredericton new mills are projected. In Nova Scotia an American syndicate is about to build large mills, the town of Parrsboro is moving in the direction of securing a mill, and on the Sissiboo river another mill is likely to be built. At Ottawa, Petawawa, Port Arthur and Rat Portage, in Ontario, capitalists have in view the erection of pulp mills, and even in Manitoba there is a good prospect of a mill being established, Mr. J. A. Christie, of Brandon, being the promoter. These do not include all the proposed pulp manufacturing plants in Canada. It is improbable that all the projects being exploited will be carried to completion—that could scarcely be expected—but the interest shown in the industry will surely result in a healthy development.

The question of insurance is now engaging the attention of several lumber associations in the United States. The trustees of the National Wholesale Dealers' Association have obtained statistics showing that whereas $2,500,000 had been paid in premiums by the members, but $1,000,000 had been recovered as compensation for losses sustained. It has been decided to make an effort to secure an arrangement whereby the members of the association by combining can obtain a reduction of 50 per cent. in their rates. The Northwestern Lumberman's Association is reported to have met with good success in the working of a mutual lumber insurance association. In the five years of its existence the rates have been greatly lowered, and last year the cost to policy holders was but 36 per cent. of the rate at which their policies were written. That this question has been taken up by the Western Retail Lumbermen's Association of Manitoba speaks well for the foresight of the members of that organization. It was feared, however, that the membership was not sufficiently large to permit of the successful carrying out of the scheme.

The results being accomplished by the National Wholesale Lumber Dealers' Association of the United States, a report of whose convention appears elsewhere, emphasize in a practical way what we have previously said as to the benefits of lumber associations. This organization is proving of great advantage to its members. The feature of the last meeting was the agreement entered into by which the retail dealers are to have their legitimate trade protected from the onslaught of certain wholesale dealers, while the retailers in turn agree to buy, as largely as possible, from members of the Wholesale Dealers' Association. In connection with the association, there is a Bureau of Information, from which a reliable report can be obtained on almost any lumber dealer in the United States or Canada. These reports are compiled from many different reports sent in by members of the association who have had personal dealings with the person enquired about, and are usually very complete. A system of insurance has also been inaugurated by the association, by which a member can secure a lower rate than he can through any legitimate company, and, in addition, share in the profits which may accrue from the saving in the premiums. These, and other advantages, such as the railway freight claim, legal, arbitration, and lumber inspection departments, serve to show the usefulness of the association to its members. It is possible that, through the efforts of Mr. E. C. Grant, the next convention will be held in Ottawa, when it is hoped to increase the membership of Canadian lumbermen in the association.

## QUESTIONS AND ANSWERS.

"R.K." writes: Would you inform me as to the number of railroad ties and value of same imported into Canada from the United States during the years 1897 and 1898?

Answer.—The statistics kept by the Department of Trade and Commerce of the import of railroad ties has included fence posts also, so that the item reads "Fence Posts and Railroad Ties." These were imported in the year 1897 to the value of $91,009, and in 1898 to the value of $68,236. The quantities are not given.

In Maine there are seventeen spool factories, and the white birch forests of that state annually supply the material for 300,000,000 spools on which there is subsequently wound about 50,000,000,000 yards of thread.

## THE LAKE ST. JOHN REGION WITH REFERENCE TO THE PULP AND PAPER INDUSTRY.*

By J. C. Langelier, Superintendent of Forest Rangers.

The hydrographic basin of which Lake St. John constitutes the centre embraces within its extreme limits nearly 175 miles from south to north, and about 225 from east to west. The area comprised within these limits or the superficies of the territory drained by the rivers whose waters flow into the great lake, is about 30,000 miles, or 19,200,000 acres. The area of Maine is equal to that of all the other New England States. Nevertheless, it does not exceed by 2,000,000 acres that of the territory of Lake St. John, which exceeds by 1,808,640 acres that of New Brunswick, by 5,819,520 that of Nova Scotia, is double that of Denmark and of Holland, and nearly three times that of Belgium. Lake St. John forms the hydrographic centre of this vast region. Its elevation is about three hundred feet above the level of the sea. In its greatest length between the mouth of Belle Riviere and the estuary of the Mistassini, it measures 27¾ miles and 20 in its greatest width from the estuary of the Peribonca to that of the River Ouiatchouan. The perimeter of this lake forms a line 85 miles long and its superficies is 365.4 miles or 263,856 acres.

The principal rivers that fall into Lake St. John are: On the South-east the Belle Riviere, about a hundred feet wide, 45 miles long, and whose chief tributary brings the waters of Lake Kinogamichiche and forms a water-fall sixty feet high at a short distance from the village of Hebertville; on the south the Metabetchouan or riviere du Poste, about 50 yards wide and 80 miles long; on the south-west the Ouiatchouan, about 60 yards wide and 68 miles long; on the west the Chamouchouan, which divides into branches 92 miles from Lake St. John, continuing under the same name to the south-west to 170 miles from its mouth, while the branch called la riviere du Chef, which is larger than the other, runs towards the north-west; on the north-west the Mistassini, whose main course is over 200 miles long without counting its three great tributaries, the Assiemska, the river aux Rats, and the Mistassibi; on the north the Little Peribonca, about sixty yards wide and 80 miles long; on the north-east the great Peribonca, which is over 350 miles in length, and the largest of all the rivers that flow into Lake St. John.

### WATER POWERS.

It would be difficult to imagine a region wherein the superficial conformation and the surface elevations of the soil are better adapted for producing water power than that of Lake St. John. Starting from the shores of the lake on the north and north-west, the land rises by steps from one plateau to another. These steps are marked at several places by ridges forming so many obstacles to the course of the rivers which overcome these obstacles and, descending from one plateau to another, they form cataracts frequently of considerable height.

A line drawn around Lake St. John, a dozen miles to the north of the lake, thirty to the north-west, fifty to the west, two to the north and ten to the east, would circumscribe the water-powers set forth in the following table:

| Rivers. | Motive Power. |
|---|---|
| Great Peribonca | 301,025 horse power. |
| Little Peribonca | 1,500 " " |
| Mistassibi | 75,000 " " |
| Mistassini | 60,000 " " |
| Au Rat | 22,723 " " |
| Assiemska | 15,000 " " |
| Chamouchouan | 100,000 " " |
| Au Sammon, aux Iroquois and Auiatchouaniche | 2,000 " " |
| Ouiatchouan | 33,000 " " |
| Metabetchouan | 2,500 " " |
| Belle Riviere and Aulnaies | 500 " " |
| Little Discharge | 25,000 " " |
| Grand Discharge | 15,000 " " |
| Total | 653,248 " " |

### FORESTS AND TIMBER.

We have seen above that the territory of Lake St. John covers an area of 19,200,000 acres. Of this less than 500,000 acres is under cultivation or cleared, and the remainder is covered by forests. The principal kinds of timber are spruce, balsam fir, white birch, cypress and pine. White, black and red spruce constitute more than 75 per cent. of the timber. Fire has ravaged this territory in many places. The disastrous effects of the great fire of 1875 in the Mistassini region are no longer visible; the second growth is as fine as the first, as regards the size of the trees, while the wood is sounder and less knotty. In the Peribonca region the timber is rather small for saw logs, but is of the best kind for pulp.

The quantity of pulp wood in the Lake St. John region is practically unlimited. Taking only 5 cords to the acre as the average, we obtain fabulous results, which clearly show that this immense territory can provide an almost inexhaustible supply of raw material.

The basin of the Great Peribonca covers an area of 8,320,000 acres. There is certainly no exaggeration in estimating at five cords per acre the quantity of black and white spruce suitable for pulp making in this region, which would make 41,600,000 cords.

The basin of the Mistassini covers about 4,800,000 acres of wood-land, which, at five cords per acre, would give 24,000,000 cords of pulpwood.

The region drained by the Chamouchouan contains at least 3,200,000 acres of forest, which would also give 16,000,000 cords of pulp wood at the same rate of five cords per acre.

In the remainder of the Lake St. John territory, that is the southern part drained by the Ouiatchouan, Metabetchouan and other rivers, there are also 3,200,000 acres of forests of coniferous trees, which could also give 16,000,000 cords of pulpwood and even more.

All these data may be resumed as follows:

| Region | Area. | Quantity of Pulpwood. |
|---|---|---|
| Peribonca | 8,320,000 acres | 41,600,000 cords. |
| Mistassini | 4,800,000 " | 24,000,000 " |
| Chamouchouan | 3,200,000 " | 16,000,000 " |
| Ouiatchouan | 3,200,000 " | 16,000,000 " |
| Total | 19,520,000 acres | 97,600,000 cords. |

These ffgures represent only the product of the first cut. It is well known, however, that if carefully attended to, spruce forests grow up again in twenty years.

### PULP INDUSTRY.

Wood and motive power are the principal elements needed for making pulp. Now, in examining the foregoing data, we must conclude that there is no country or region better adapted to this industry than the immense territory of Lake St. John, especially the northern and north-western portions. Estimating the quantity of wood required to make a ton of pulp at 1½ cord, the maximum figure, the 97,600,000 cords of wood in this territory would permit of the manufacture of 65,666,666 tons of pulp, or 1,000,000 tons per annum for 65 years. The Canada Lumberman on the faith of reliable statistics said in December last that the paper mills of the United States consume 1,000,000 cords of wood annually. The Lake St. John territory could supply this quantity for 65 years merely with the first cut of its forests of coniferous trees; this will give an idea of the importance of this territory with reference to the pulp and paper-making industry.

In Europe, Sweden, Norway and Germany are the foremost in the making of wood pulp. They supply the greatest quantities of this material to England and to France, besides what is sent to other large centres such as those of Belgium, Spain and Italy. According to the statistics published in the Forestry Magazine in October, 1884, the total area of the forests of each of those northern countries at that date was as follows:

| | | | |
|---|---|---|---|
| Sweden | 40,636,883 acres, | or 40.43% | of whole territory. |
| Norway | 17,279,000 " | 22.30% | " " |
| Prussia | 20,097,014 " | 23.35% | " " |

During the fourteen years that have elapsed since then, the wood pulp and other similar industries must have disposed of a considerable portion of those forests. This does not prevent the Scandinavian countries from continuing to export yearly about 500,000 tons of pulp in the shape of raw material or of paper, after supplying all the needs of domestic consumption.

The coniferous forests of the region of Lake St. John exceed in extent those of Norway, are nearly equal to those of Prussia and to halt those of Sweden. It is acknowledged that our timber—black and white spruce—is of superior quality to that of Scandinavia and Prussia.

All the above gives an idea of the possibilities of the pulp and paper industry in the Lake St. John region. If the requisite capital be devoted to it there is enough wood there and enough motive power to supply wood pulp to half Europe.

### FACILITIES FOR ESTABLISHING FACTORIES.

The great water powers of the Peribonca and Mistassini are connected with the railway by means of the steamboats running regularly on Lake St. John. The transportation of building materials, and especially of heavy pieces of machinery, could therefore be easily effected without heavy expense.

Most of the products of the factories, pulp and paper, would be exported chiefly to Europe. In summer the shipments could be made with advantage from the port of St. Alphonse at the head of Ha! Ha! Bay. This bay, which measures 8 miles in depth by 2 in width, is beyond a doubt one of the finest seaports in Canada. Protected against the south, west and north winds by the mountains that surround it on those sides, it is exposed only to the easterly winds, which seldom blow, and which are in great part kept off by the high capes at the entrance of the bay. The depth of the latter is considered everywhere, varying from 5 to 80 fathoms at low water, and its clay bottom affords good holding ground for anchors. At the St. Alphonse wharf the water is 29 feet deep at low tide in spring tide and 47 at high water. The entrance of the bay is only 53.59 miles from Tadoussac.

From the mills on the Great Peribonca and Mistassini, pulp and paper could be carried in steamboats to Roberval and thence shipped to Chicoutimi or Quebec. These means of transport already exist. But if the undertaking were in the hands of a powerful company with the requisite capital, it would be much more advantageous to connect the mills themselves and the port of St. Alphonse by means of an electric railway which would be about 30 miles long.

With the water powers and the wood in the Lake St. John territory, it would be possible to produce over 500,000 tons of paper a year, and this ad infinitum. The annual value of this product would exceed $20,000,000, which gives an idea of the resources and wealth we possess in that corner of the province, if its forests are wisely preserved and intelligently utilized. It is doubtful whether the Yukon, with its gold, can produce as much for as long a time.

* Abstract of a report submitted to the Department of Woods and Forests of the Province of Quebec.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.*

VOL. V. TORONTO, ONT., MARCH 29, 1899 No. 10.

## CANADA LUMBERMAN

PUBLISHED BY

**The C. H. Mortimer Publishing Co'y of Toronto, Limited**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED.—One first-class Band Saw Fitter and one first-class Band Saw Runner for new mill. Apply to J. H. DANSEREAU, Vercheres, Quebec.

PORTABLE STEAM SAW MILL (JOHN ABELL make) for sale; 25 h.p. Boiler and Engine, boiler in good condition, engine slightly broken; also House and Orchard in connection. Will be sold cheap. Apply to GEORGE A. FLEMING, Hockley, Ont.

FOR SALE.

LIGHTNING MATCHER REVOLVING BED Surfacer, Re-saw, Band Saw and other Wood Tools—all in good working order. Address, "MACHINERY," P.O. Box 43, Kingston, Ont.

TO MILL MEN.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

Established 30 years. Address, "PAPER," care Deacon's Advertising Offices, Leadenhall St., London, England.

## FOR SALE

### Saw and Shingle Mill, Sash and Door Factory

With Dry Kiln complete, Machinery, Buildings, Out-Buildings, Dwelling Houses, etc., etc., located in the Kootenay District, British Columbia, with three thousand acres best timber limits within five miles of mill. Timber can be drawn to mill for ten cents a thousand. Satisfactory reasons for selling. Apply for particulars to, and correspondence solicited,

ROBERT F. SEGSWORTH, Barrister,
103 Bay Street, Toronto.

IMPORTANT TO LUMBERMEN

## FOR SALE BY TENDER.

### Valuable Saw Mill and Timber Limits in British Columbia

56,542 ACRES, MORE OR LESS, VIRGIN forests of Oregon Pine, Cedar and Spruce Limits in British Columbia as follows:—

BLOCK 1.

Lot 51, 23,600 acres, more or less, Sayward District, Vancouver Island.

BLOCK 2.

Lot 439 G2., 9,280 acres, more or less, New Westminster District.

Lot 50 G., 6 720 acres, more or less, New Westminster, Chilliwack.

Lot 55, 15,900 acres, more or less, New Westminster, Chilliwack.

Lot 83, 1 042 acres, more or less, New Westminster, Chilliwack.

The above limits were selected years ago by competent cruisers at a time when every opportunity offered and was taken advantage of to secure the "pick" of timber lands, which have since become greatly enhanced in value.

BLOCK 3.

About 400 acres, more or less, of mill site and first-class farm lands, en bloc, situated on the north branch of the Fraser River about three miles east of New Westminster City. 200 acres, more or less, of this land is cleared, graded, drained and fenced in first-class manner, and been under cultivation a number of years.

The mill located upon this site is a frame mill, about 455 x 72 feet, with T across tail end of main building about 176 x 60 feet. The whole structure from foundation up is built in the most substantial manner—well timbered and braced with knees, metal roof, three (3) engines of 300 h.p each, and fitted throughout with special machinery for working up British Columbia timber of all dimensions, as well as for working up the refuse into lath, pickets, box shooks, etc.; also planers, matchers, etc.

One large refuse burner; one large stone boiler house, metal roof, containing ten large tubular boilers, pumps, etc. Good frame office, boarding house, cottages, horse stables, machine shops and blacksmith shop.

Ample booming ground, constructed in the most substantial and convenient manner.

The New Westminster branch of the C. P. Railway crosses this mill site, also has a switch graded to the mill and through the yard, giving this property first-class railway outlet, in addition to best facilities and ample water for loading large ocean-going vessels, giving the property unrestricted access to the markets of the world.

Sealed tenders for the above property, either en bloc or each parcel or block separately, will be received by the Secretary of the undersigned at their office, 110 Wellington Street, Ottawa, Ont., up to MAY 20TH, 1899, at twelve o'clock noon.

All tenders to be marked "Tenders for Maclaren-Ross B C. Property."

Tenders to be opened by the President and Secretary at the above address.

Terms, 10% cash, 20% in thirty days, and balance in six, nine and twelve months, by secured notes at 5% per annum. The property to remain vested in the Company until notes are fully paid.

The highest or any tender not necessarily accepted.

All letters requesting further information to be addressed to—

"THE SECRETARY,
"Maclaren Ross Lumber Co., Limited,
"110 Wellington St., Ottawa, Ont."

Ottawa, Ont., 15th February, 1899.

## CURRENT TRADE CONDITIONS.

ONTARIO.

The recent snowfalls have lengthened the logging season, and all timber cut will likely be gotten out of the woods. It is not yet known just how the past winter's production of pine logs will compare with that of last year, although the opinion has been expressed that in the Georgian Bay district it will be slightly heavier, and that in the Ottawa valley there will be a reduced output.

The backwardness of spring has affected the volume of lumber moving, although favorable reports continue to be received of the present and prospective demand. Several manufacturers in the Ottawa valley have disposed of their 1899 production, and the fact that probable buyers have of late been numerous leads to the opinion that other transactions will soon follow. Low grade and common stock seems to be in most demand, some of the mills having closed contracts for 75 per cent. of their cut at an advance of from 15 to 20 per cent. on last year's quotations. While the cheif interest pertains to the lower grades, there is also a fair demand for good lumber. Dry stock does not cut any figure in the market, the quantity in first hands being very small.

Manufacturers of hardwood lumber are adhering to their decision to sell their lumber as mill run. This is limiting the volume of business, as there is frequently a disparity between the value of log run stock as fixed by the dealer and that in the mind of the manufacturer. As an offset to the increased price of raw material the furniture and chair manufacturers have advanced prices of finished goods.

QUEBEC AND NEW BRUNSWICK.

Local trade in Quebec and New Brunswick has been rather backward, but an increased number of enquiries for lumber and shingles have been received from the Eastern States, and these are likely to be followed by orders. Buying for the British market is showing more life, and as the season advances and the actual extent of stocks becomes better known, a change of attitude will no doubt be shown. Some purchases of deals have been made at $9.50 per thousand f.o.b. Grindstone Island and St. John, N. B. This is an advance upon last year's quotations, but still too low to leave a fair margin of profit to the manufacturer. The general opinion is that prices will advance, especially if caution is exercised by both manufacturers and shippers.

MANITOBA AND BRITISH COLUMBIA.

Dealers in Manitoba and the Territories look forward to a good season's trade, as tenders are being taken in Winnipeg and the larger towns on many new buildings. While the demand for lumber for immediate delivery is not large, the enquiries received indicate that dealers realize the necessity of increasing their stocks at an early date. Country trade has continued later than usual, but this will soon be terminated by the approach of the seeding season. It is learned that three United States houses this year have representatives in Winnipeg, these being the Pine Tree Lumber Co., the Crookston & St. Hillaire Lumber Co., and the Brainerd Lumber Co. In British Columbia the lumber trade is experiencing an active local demand on account of increased building operations, and prices are a trifle firmer.

UNITED STATES.

The recent cold weather and accompanying snow falls greatly improved logging conditions in the Northern States, and it is probable that the input of both pine and hardwood logs will be nearly as heavy as was anticipated early in the season. In view of this, the movement of lumber from first hands has shown a falling off of late, as dealers believe that procucers' prices are too high, and are deferring purchases until after the opening of the sawing season. From present indications, it does not appear that prices are likely to weaken, as magnitude of demand and scarcity of supply are strong features of the market. All-round advances continue to be made on pine and hemlock at mill points, and it is learned that two-inch hemlock is held at $7.25 and $8.25 f.o.b. Manistee, Mich. Box lumber is practically out of the market, and other grades are being purchased to meet the requirements of the manufacturers. Lath is very firm, white pine having advanced to $2 in the Chicago market.

FOREIGN.

The transactions in Canadian wood goods in the British market have been more numerous of late. Building is active, and consumers are purchasing more liberally to meet their season's requirements. At London a considerable quantity of pine and spruce lumber has been disposed of at auction sales, which has had a tendency to depreciate values. Generally, however, prices are firmer. Third quality spruce is held at £7 10s, and in all probability another advance will be made before the arrival of spring shipments. The holders of spruce at Liverpool are asking higher prices, especially for favorite dimensions. A fair amount of business is being done on contracting for goods to arrive, and brokers are adopting a stronger attitude.

The receipts on the Barbadoes market have shown a falling off, and consequently prices have a tendency to strengthen. Elsewhere will be found current quotations.

### NEW BRUNSWICK CEDAR SHINGLES.

In the New England states the weather of the past week has been exceptionally disagreeable, and building operations are at a standstill as a result. In spite of the lack of demand, cedar shingle values are said to be firmly maintained as a rule, and quotations are as follows, delivered on Boston freight rates: Extras, $2.85 to $2.90; clears, $2.45 to $2.50; saps and 2nd clears, $1.90 to $2.00. The season for building operations to commence with a rush is now near at hand, and it would seem that within a short time the usual spring demand for shingles will begin. It can safely be stated that when it does begin, prices on all grades will rapidly climb to such figures as are satisfactory to the manufacturers, and at which they are perfectly willing to dispose of their product, for the retailers are only lightly stocked and must have the goods. It is not believed that there is any variety of shingles made that can supplant the New Brunswick cedar in the New England market in any degree whatever until the latter has passed the basis of $3.25 for extras.

There is, then, a strong hope that the manufacturers will realize their full opportunity and avail themselves of it. For the last few years in shingles, as well as in all kinds of lumber, the buyer has uniformly been able to dictate the price. To-day the reverse is true, and the manufacturers have almost full control. The indications are that they realize the strength of their position, and intend to have for one year at least a fair margin on their product. In this, shingles only sympathize with all other varieties of lumber in the United States markets, and retail dealers now so thoroughly understand that all lines are advancing steadily that they much more willingly accept advances and place orders immediately for their needs, when in want, for fear of continued advances. The shingle manufacturers, therefore, to avail themselves fully of their opportunity, should read the trade papers thoroughly, and keep posted from week to week as to the exact state of the market.

When giving quotations, manufacturers should make them for immediate acceptance only, and should not allow commission wholesale houses to foist orders upon them at less than the figures they have quoted. When receiving orders more rapidly than they are producing the goods, they should advance prices and hold firmly to the advance. This year it is a manufacturers' market, and any reasonable advances all along the line are likely to be maintained.

One unfortunate feature of this particular line of business in years gone by, has been the fact that the average manufacturer of shingles has depended very largely for his knowledge of market prices upon wholesale commission houses, who were supposed to represent the manufacturer, truthfully tell him the position of the market, and give him current quotations, as well as sell his shingles. For these services such wholesale houses were supposed to derive as their remuneration a commission of 5 per cent. As a matter of fact these commission houses, being in the business from pecuniary motives, frequently report a lower price than actual current figures, with the object of thereby being themselves in a position to quote a little under their commission competitors, and secure more than their share of orders. In cases where they could easily secure full values and more than they had quoted as current figures, it was, and still is, an easy matter for the commission house to pocket the difference (between price obtained and price allowed the manufacturer as market value) to add to their commission. The only feasible way, therefore, for a manufacturer to protect his own interest (and nobody will protect it for him, certainly not his wholesale commission representatives), is to know for himself what his goods are worth, and then see that his wholesale friends pay for shingles accordingly, and that they are not left to sell goods for any price that suits themselves and is anywhere near market value, obliging the manufacturer to pocket the loss between what he actually received and what he should have received, and also at the same time breaking the market, and establishing a precedent for himself as well as others to follow in the future.

Another abuse of confidence on the part of the wholesale commission house toward the manufacturer, has been the sending of orders that call for a greater or less arbitrary freight rate over Boston rates, to a manufacturer at Boston prices, or only a very slight advance on Boston prices and not enough to cover the extra freight. All manufacturers should say to their representatives: "You are more familiar with arbitrary freight points and extra freight thereto than we can possibly be; we therefore quote you prices on Boston freight rates only, and any arbitrary points will be covered by our invoicing to you at our quotations at Boston points, and we will allow you to deduct only Boston rates." In this way the commission houses will be obliged to look out for themselves, and they are perfectly capable of doing it.

The outlook for the manufacturers this year is very bright, and if they will only take the full control of their sales into their own hands, we are sure they will be amply repaid therefore.

### STOCKS AND PRICES.

At Saginaw, Mich., box lumber is selling at $11.50 to $12.50, mill culls at $8.50 to $9.50, and Norway bill stuff at $9.50 to $11.

J. & R. McLeod, of Black River, N.B., manufactured with a portable mill over one million feet of deals during the past winter.

A timber berth on the Restigouche river, in New Brunswick, was sold by the Crown Lands Department last week to F. B. Coleman, at $75 per mile.

It is probable that the saw mill of Wm. Peters at Parry Sound, Ont., will be operated the coming season, and that the mill in Bay City which was run last year will not resume operations.

It is estimated that about 10,000,000 feet of white birch spoolwood will be shipped from Bangor, Maine, this year to Great Britain. The greatest amount shipped in any previous year was 7,000,000 feet.

It is reported that the St. Anthony Lumber Co., of Whitney, Ont., have sold several million feet of lumber at an advance of $2 per thousand over the price obtained for the same grade of stock two months ago.

The mill of the Conger Lumber Co. at Parry Sound, Ont., will probably resume operations this season. It is said that the company are negotiating for a contract to cut 10,000,000 feet of lumber, and that they will also cut 3,000,000 feet of their own logs.

Very little lumber is in the hands of manufacturers at Manistee, Mich. As high as $12 has been paid for common inch, and lots of pine piece stuff have been sold at $11.25 to $11.50 for 18-foot and under. There are no lath to be had, and probably $1.75 would be paid for good white pine on dock.

American owners of Ontario limits are said to be making active preparations for cutting their logs in the province. According to report, Turner & Fisher, of Saginaw, Mich., have given a contract to Chew Bros., of Midland, Ont., to manufacture 15,000,000 feet of their cut of 24,000,000 feet, while James Playfair & Co., of same place, will manufacture the remainder.

Hardwood lumber is selling on the Chicago market at the following prices: Dry basswood, firsts and seconds, $22; common and better, $18; log run, $14; soft elm, common and better, $16; red birch, $40 to $50; white birch, firsts and seconds, $26 to $28 for inch and $28 to $35 for thick; common and better, $20; thick ash, $45. As to pine prices, it is thought that the opening price for piece stuff will be about $11. Low grade boards are very scarce, No. 3 being held at $10.50.

Messrs. Bennetts, Limited, held an auction sale of lumber at Manchester, Eng., on March 16th, the prices realized being about as follows: Spruce scantlings, £5 15s. per std.; spruce boards, 1 × 5 and 6, £6 10s.; birch planks, £6 12s. 6d. to £6 15s.; 2nd quality Petersburg red boards, £9 15s. to £10; 1st quality Petersburg red battens, 2½ × 7, £10; 1st quality log pine boards, ¾ in. to 2 in. thick, 1½d. per foot; 2nd quality log pine boards, various sizes, 1½d. to 2d. per foot; pitch pine boards, various sizes, 1½d. to 1¼d. per foot.

At an auction sale held by M'Dowall & Neilson, Greenock, Scotland, on March 9th, the business done was as follows: 40 logs 1st class waney boardwood, 860 feet per page, 2s. 2d. per cubic foot; 40 logs 1st class waney boardwood, 700 feet per page, 2s. ½d.; 20 logs 1st class waney boardwood, 1,320 feet, 2s. 5½d.; 20 logs 2nd class waney boardwood, 1,040 feet, 1s. 6½d.; 27 logs prime rock elm, 2s. to 2s. 3d.; 40 logs Mobile oak, 1s. 6½d.; 20 logs hickory, 1s. 3d.; 606 logs sawn pitch pine, 500 to 700 feet, 11d. to 11¼d.; 571 3rd pine narrow deals, 10½d.; 573 3rd pine ends, 11d.; 1,247 1st pine deals, 11 in., 2s. 4½d. to 2s. 5½d., and about 5,000 pine and spruce ends, etc., from 6¾d. to 8½d. per foot.

### THE BARBADOS MARKET.

From the market report of Messrs. S. P. Musson, Son & Co. the following particulars of the Barbados market are obtained: Receipts of lumber have not been heavy of late, which has had a tendency to strengthen prices. The schooner Florence A arrived from Calais, Maine, early in March, with 25 M ft. spruce boards and 22 M ft. 3x4 spruce scantling, the former being sold at $11.31 and the latter at $12.03; indications point to an improvement in spruce. The sale recorded is of 53 M ft. white pine boards at $19.34 shipping and $12.56 second quality. One or two medium sized car loads of first and second quality white pine would be saleable at about these prices. A quantity of cedar laying shingles have been sold at $2.85. The schooner Eureka recently arrived from Halifax, with 78,000 cedar shingles, which were sold at $3.16. The schooner Stella E from Lunenburg, N. S., carried 30 M shipping and 50 M second quality white pine, sold at $19.11 and $13.25 respectively.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

In our weekly issue of March 1st reference was made to the failure of Joseph Jacobs, a contractor of Montreal, and it was stated that the Montreal Lumber Company was a creditor to the extent of $1,500. This company have drawn our attention to the fact that by giving prominence to their name when many other creditors were also interested an injustice was done them, which was far from the intention of the publishers of this journal.

### LUMBER FREIGHT RATES.

#### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts.; Pembroke to Montreal, 8c.; Quebec, 13c. per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs. Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts.; lightered 19 cts. per 100 lbs. Pembroke to New York, track delivered 18c., lightered 20c. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

#### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Har-

LAWRENCE & WIGGIN
Wholesale Lumber Dealers - 55 Kilby Street, BOSTON, MASS.

bor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berdiedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the distr t freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

The rates at present in effect on the Canadian Pacific Railway to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. The rates are based on a minimum of 30,000 lbs. per car."

Summer rates to New York, via Albany and barge line expired on November 28th, owing to closing of navigation on the Hudson river, and the usual all rail rates became effective, as follows: To New York, for track delivery, and all points on the Hudson river, or the New York Central and West Shore railways, from Ottawa, Hull, Aylmer, Deschenes Mills, 15c. per 100 lbs.; from Carleton Junction, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including litherage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

Summer rates to Montreal expired on November 15th, and the usual winter rates became effective as follows: From Ottawa, Hull, Aylmer and Deshcenes Mills, 5c.; Carleton Junction, 6c.; Arnprior and Braeside, 7c.; Renfrew, Eganville and Pembroke, 8c. The rate to Three Rivers is 4c. and to Quebec 5c. over the rate to Montreal. The minimum car load in all cases where rates are computed on a weight basis is 30,000 lbs.; when on a measurement basis 10,000 feet B. M.

The C.P.R. also make the following rates on seasoned pine lumber to West St. John, N B., for export: From Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, $3.75 per M feet; Carleton Junction, Braeside and Arnprior, $4.00 per M feet; Renfrew, Douglas, Eganville and Pembroke, $4.50 per M feet. On lumber for local consumption at St. John, N B., and common points the rate is 20 cents from Ottawa, Hull and Aylmer, and to Halifax 21 cents from same points. On seasoned pine lumber the rate from Ottawa to Oswego, N.Y., is $1.90 per M feet, and to Syracuse, N.Y., $2.20 per M feet; from Ottawa to Buffalo, 12 cents and to Detroit 14 cents per 100 lbs.; to Boston, Mass., and common points, 15 cents from Ottawa, Hull, Deschenes Mills and all points east thereof; 16 cents from Carleton Junction; 17 cents from Arnprior, Braeside and Renfrew, and 13 cents from Eganville and Pembroke, and proportionate rates from points further west on lumber for consumption in the United States. The export lumber rate is 13 cents from Ottawa and Hull, 14 cents from Deschenes Mills, Aylmer and Carleton Junction, and 15 cents from Arnprior and Braeside to Boston.

# THE RETAILER AND Wood-Worker

## PIPING AND HOODING EXHAUST FANS FOR MILL USE.

Almost every planing mill or wood-working factory of the present time uses the exhaust fan for the purpose of taking the shavings and dust from the machines and depositing same in a suitable shavings vault near the boiler room, where they are used wholly or in part for fuel. In many factories, writes "G. T. L." in the Wood Worker, this system does not give full satisfaction, and is a constant source of trouble and expense. While some mills get fairly good results, it is usually at great expense of power and consequent cost of fuel, as well as the continual patching up of pipes, hoods and minor troubles. In every case where the fan does not work properly you can trace the trouble either to the imperfect way in which the pipes from the machines to the fan are rigged, the wrong method of hooding around the cutter heads, or in the way that pipes from the machine enter the main pipe.

There is no good reason why an exhaust fan should not work satisfactorily as any machine in the shop. If the fan is of suitable size and properly piped to the machines it will not cause any more expense, over the usual wear and tear for the work it does, than other machines. A man would be considered a fool who tried to make a pony do the work of a horse, or to carry a ton of coal in a light buggy, or if he used a cart horse for a trotter and a coal cart for a road wagon, although he could do the latter with better results than the former. So it is with the fan. You can't expect a small fan to do good work beyond its capacity. A too large fan is equally as bad, as it uses power that could be better employed, for the average mill, especially where heavy planing is done, is usually short on power.

Having occasion during many years to visit the different wood-working factories of the country, I found the shavings (or, rather, how to get rid of the shavings) problem a hard one for the mill man to solve, and it became a sort of study to me. It was a benefit to me in my business and I was often able to point out where trouble could be remedied and power saved. I became interested in the subject and made it a point to inspect thoroughly every pipe system I came across. From what I have seen, and from experience, I will give my ideas as to fans, piping and the proper way to hood machine cutter heads.

In the first place, the size of fan to be used depends entirely on the number of machines used and the class of stock they have to work on. The figuring out of pipe area is all right from the blower man's idea of the fan you ought to have, but you want a fan to pull shavings, not air, and his figures are often on the too-big fan, because the sale is better for him. The result is unnecessary expense for piping and waste of power. If a 24-inch planer is used for heavy dressing on yellow pine, cypress, whitewood, etc., it takes a larger pipe from the cutter heads to carry the shavings to the fan than it would if the machine was working on hardwoods or kiln-dried stock. A 36-inch fan might work perfectly in a plant of several planers working on the latter stock, while a 50-inch fan might stall on the same lot of machines working on the former stock. So in selecting a fan, the work the machines have to do is first to be considered, and second, the number of machines in use.

I have noticed that a six-inch pipe for the top head on a 14-inch planer and matcher, four-inch pipe for the lower and adjustable side head, and three-inch pipe for the guide-head, give the best service where the machine is used for jobbing or custom work ; and one inch larger diameter of pipes for machines where the cuts are heavy or the machine is used for dressing wide stock at rapid feed. For a 24-inch machine eight-inch pipe for top head, six-inch for lower head and five-inch for side heads are best, and for molding machines six-inch pipe for the top head and four-inch for the others. For smaller machines a four-inch pipe works the best. The size of pipes given are large enough to remove all shavings as made (provided the hoods to cutter heads are right) and will not clog if the fan is working up strong to speed as called for.

Many mill men think a hood should set as close as possible to the cutter head and enclose it entirely. This is a mistake, and many a mill that is now short of power and getting poor results from the fan, could make a wonderful change by simply altering the hoods on the machines. A cutter head running at any speed is a fan in itself. The faster it runs the more blast it gives, and this force will throw shavings for many feet from the knives guided by the usual shaving bonnet as furnished with the machine. Now enclose the cutter head as closely as possible, and, dressing stock the full width of the knives, the head is practically encased and the shavings will be carried around with the head until clogged up and the head stalls. If the fan is strong enough to overcome the force of the cutter head, then you get rid of the shavings, but the fan has to do just that much unnecessary work and at double the power required.

The hood or funnel, as it is sometimes called, should be made so it will catch the shavings as they are thrown into it from the cutter head force. Fig. 1 will give the idea. The opening to the hood should be clear of the knives so the

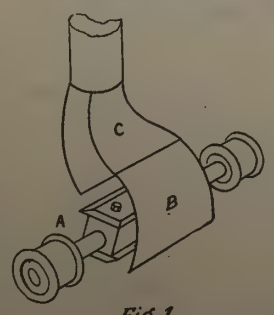

Fig 1

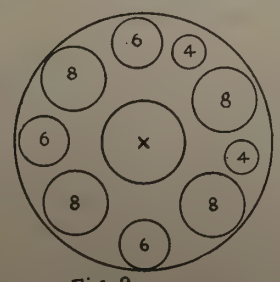

Fig. 2

shavings can be thrown into it, then the fan can do its work properly. Try this by taking a handful of shavings and throwing them into an open pipe, and see how quickly the fan will take them up. Shavings are taken up by the fan by the suction of air through the pipes, and you have to allow air to enter or you get no suction. So, if you hood your cutter heads tightly, where does the suction come in? From the machine to the fan the shavings are drawn by this suction or exhaust force, but leaving the fan are forced out by the same air as it is discharged, the same as a blast fan. Many fans do not work right because the discharge pipe is cramped at some point or has too many bends or turns in it. This prevents the free discharge of air and shavings, causing a back pressure that the fan is overworked to contend with, and of course at so much greater expense of power and the wearing out of belts, and piping at the bends or turns.

To select the suitable size fan, take the diameter of pipes in inches necessary to take care of each machine, add them up and divide by three. This will give you the diameter of inlet for fan. For instance, four machines taking eight-inch pipe make 32 inches, three with six-inch pipes make 18 inches, and two with four-inch pipes make eight inches, or a total of 58 inches. Divide this by three and you have 19⅓ inches, which is the diameter for the inlet to proper size fan for these machines. If you make it a trifle larger you will have plenty of spare fan to take care of two or three smaller machines if wanted. Fig. 2 will show this clearer.

If you have more machines to take care of than a single fan of 24-inch inlet will handle, a double fan is preferable to a single one of larger size. The best is to provide two single fans, or better yet, one fan for each floor or section of floor. If only one fan is used and it is disabled, the whole factory has to stop, while by using two or more fans only a part of the mill is hampered in case of trouble. The discharge pipe from the fans may enter a common discharge pipe at a point near the shavings vault, or the dust arrester, if one is used. The placing of a fan is very important, so the discharge will be as straight or direct as possible, avoiding short bends or perpendicular pipes. If turns are necessary, make them as wide as possible, and for elevations give as much incline as you can. Remember you can draw or pull around most any bend or corner, but to discharge or throw around a corner is not so easy. In the first case you coax around, and in the second you bang around, and extra force is required at every bend or turn.

After placing the fan, carry the inlet pipe full size to the first machine (not necessarily the one that does the heaviest work), and if you want the best system, one that will be the cheapest in the

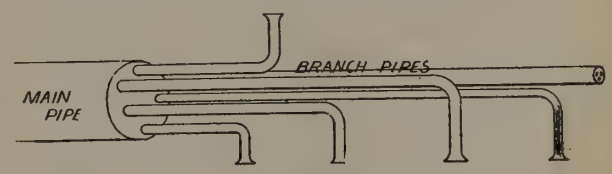

Fig. 3

long run, head the pipe up right there. From this heading run separate pipes (see Fig. 3) to each machine. For illustration, take a flute and blow through it and the first hole gives its note, and so on ; but open up again and the first hole responds. If you have wind enough to fill the flute to more than three or four of the holes can discharge, you can get the notes, but the first one will be the loudest, and so on down until the wind dies away. Now, if you take as many straws as there are holes in the flute, make them of different lengths and place the even ends in your mouth and blow, you will discharge as much air through the longest straw as the shortest, all getting their full capacity. Immerse the straws in water and draw or suck on the even ends and you will get just as much water through the longest straw as the shortest. Barring a little more friction the longest pipe from a machine entering in the heading of the main pipe (or, similarly used, the mouth) will suck or exhaust equally as well as the shorter one.

This method of piping is not very much more expensive than the flute system, and certainly gives better results : first, as to its working ; second, expense of keeping in repair and freedom from delays by clogging. If the flute system of piping is used don't make the mistake of running the main pipe tapering ; it's wrong—dead wrong.

If you are to pull shavings from the rush or current of air as it is exhausted, you certainly must lose force by gradually enlarging the suction pipe from a small diameter up to the full size of fan inlet. Take an ordinary funnel. Place the large end in your mouth and draw air through it. If you can fill the funnel end you get only the amount of air that you are able to draw through the small end, and to all intents and purposes a straight pipe of diameter of the small end would give same results. The same applies if you blow or discharge air. Keep your main line pipe to the fan, of regular diameter, and the discharge pipe full diameter of the outlet.

The branch pipes from the machines should enter the main pipe at the sides, at, or above, the center line, or at the top (never on the bottom), and with a turn pointing to direction of fan. The smaller pipes from side heads should enter the branch at nearest convenient point. The speed of the fan should be as catalogued by the maker, and if properly piped, will do its work easily and well to its full capacity. If the fan is too small for the work required, from adding new machines on from time to time, don't speed it up or run chances of a smash-up, or load the belt with a heavy tightener pulley and have trouble with the boxes or journals, or make the mistake of putting in a larger fan and expect it to work with the same piping as old one, but get an additional fan to do the extra work, required and thus remedy the trouble.

In equipping a new factory with the exhaust fan system, use the same care and judgment as you do with the rest of your plant. Lay out what you want or need and then get a good company to make the pipes and put them in; or your mill foreman will know from experience about what is the best way to get good results, so don't leave this work all to the pipe man. You will be paid for your trouble in the end if you study it up and plan yourself, or give the pipe man pointers. Where the pipe system is up and not working right, perhaps you may get some hint from this article that will enable you to locate the trouble and remedy it.

## TRADE NOTES.

The Chicago office of the Magnolia Metal Co. has been removed from the Traders' Building to the Fisher Building, 281 Dearborn street.

McKay Bros., East Hatley, are putting in one of the Jenckes Machine Co.'s steam plants, consisting of a slide valve engine and horizontal tubular boiler.

W. D. Pettigrew, of Winnipeg, who is developing mines at Wabigoon, Ont., has placed an order with the Jenckes Machine Co. for hoisting, crushing and pumping plants.

Thomas Lord, of L'Epiphanie Station, Que., is increasing his plant by the addition of a 35 h.p. engine, from the well known builders, the Jenckes Machine Co., Sherbrooke, Que.

The Lake Manitou Gold Mining Co., of St. Paul, have placed an order with the Jenckes Machine Co., Sherbrooke, Que., for a ten stamp mill to be erected on their property near Wabigoon, Ont.

The Defiance Machine Works, of Defiance, Ohio, are distributing to the trade a large hanger, on which is shown illustrations of some seventy special patent woodworking machines which they manufacture for making hubs, spokes, wheels, wagons, carriages, handles and hoops.

Geo. Long, of Sherbrooke, whose increasing business requires more motive power, is about to install a 25" Crocker turbine, in order that production may cope with the demand. This order was placed with the Jenckes Machine Co.

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

# THE NEWS.

—McIntosh Bros. have erected a new saw-mill near Cariboo, B. C.

—T. W. Gray, saw miller, Nelson, B. C., has sold out to Chas. Hillyer.

—W. Bladow is making preparations to rebuild his sawmill at Killaloe, Ont.

—The Cranbrook Lumber Co., of Cranbrook, B. C., purpose building a new saw mill.

—Chew Bros., of Midland, Ont., are erecting a box factory, 120x42 ft., at Dollartown.

—W. B. Fairbairn has disposed of his lumber business at Emerson, Man., to J. A. Badgley.

—H. V. Boote has purchased the lumber yard of Thos. Rutherford at La Riviere, Man.

—Magee & Thompson have purchased the lumber yard of R. W. Gibson at Sintaluta, Man.

—T. Burrows, M. P. P., of Winnipeg, will rebuild his saw mill at Pine River recently destroyed by fire.

—Rhodes, Curry & Co., of Amherst, N. S., have established a branch of their works at Halifax, N. S.

—G. B. Housser & Co., lumber dealers, Portage la Prairie, Man., are opening a branch at Macdonald.

—T. G. McMullen, M. P. P., has made extensive repairs and additions to his saw mill at Hartville, N. S.

—An exchange states that the Victoria Harbour Lumber Co. are considering the removal of their mill to Midland, Ont.

—The Southampton Manufacturing Co., of Southampton, Ont., are building an addition to their factory, and will put in a new dry kiln.

—The fourteenth annual meeting of the St. John River Log Driving Company will be held at Fredericton, N. B., on Wednesday, April 5th.

—The Bryan Manufacturing Co., of Collingwood, Ont., are just completing an addition to their planing mill, in which new machinery will be installed.

—R. C. Ervin, of Shubenacadie, N. S., has disposed of his electric light plant and intends engaging in the lumber business at Falmouth and near Windsor.

—James Playfair & Co. have removed their shingle mill from Sturgeon Bay to Midland, Ont. It is likely that Craighead Bros. will again operate the mill this season.

—The late John Larkin Cook, lumber merchant, of Toronto, who died in January last, left an estate valued at $396,000, consisting of stock in the Cook & Bros., Lumber Company.

—Estey & Thompson, of Fredericton, N. B., are said to have decided to rebuild their saw-mill at Shogamoc, although it is improbable that work will not be commenced before next summer.

—The Ontario Legislature has passed a bill empowering the town of Lindsay, Ont., to grant a bonus of $2,000, to Rider & Kitchener to establish a veneer and excelsior factory at that place.

—The C. Beck Manufacturing Co., of Penatenguishene, Ont., are putting in new box-making machinery. The company expect to keep both of their saw mills in operation throughout this season.

—Gilmour & Co., of Trenton Ont., are remodelling their large saw mill at that place, and purpose engaging extensively in the manufacture of boxes, for which purpose modern machinery will be installed.

—W. Craddock, of Huntsville, Ont., who a short time ago secured a contract for broom handles from a Liverpool firm, has completed his first car load. Mr. Craddock is purchasing large quantities of basswood logs.

—The Bronsons & Weston Lumber Co., of Ottawa, has made application to parliament to change its name to the Bronson Company, and for permission to carry on business as manufacturers of commercial products.

—Robert Watt, of Wiarton, Ont., has just rebuilt his sawmill, putting in additional power and new machinery. The improvements will double the capacity of the mill, which will commence operations upon the opening of navigation.

—The announcement is made that after May 1st the wholesale lumber business carried under the style of John S. Mason & Co. will be continued by Ichabod T. Williams & Sons, at 11th ave. and 25th street, New York city.

—The Canadian Pacific Lumber Co. have refittted and increased in capacity the sawmill at Port Moody, B. C. Arrangements have also been made to put in an improved dry kiln. The daily capacity of the mill will be between 50,000 and 75,000 feet per day.

—The Laurentide Pulp & Paper Co. are building a large sawmill at Grand Mere, Que., I. N. Kendall, of Ottawa, having the contract. The mill will cost $30,000, and the machinery will be supplied by the Wm. Hamilton Manufacturing Co., of Peterboro, Ont.

—It is said that T. Ludgate, of Peterboro, Ont., has secured from the Dominion Government a lease of Dead Man's island at Vancouver, B. C., and that he has agreed to build thereon a large saw-mill, expending $250,000, and employing several huhdred workmen,

—J. W. McCrae, of Tilsonburg, Ont., has purchased the foundry of John Makins at Lindsay, Ont. Extensive improvements will be made to the foundry and considerable machinery added. Mr. McCrae intends to manufacture circular sawing machines, shingle machines, mill fittings, engines, etc.

—Kitteridge, Smith & Co., of Shebrooke, Que., have invented a machine for making railway ties which it is expected will have a capacity of about 5,000 per day. The ties are planed on two sides and can be produced at less cost than by the ordinary method. The machine is being built by the Jenckes Machine Co.

—D. C. Cameron, manager of the Rat Portage Lumber Co., states that the building of the proposed saw mill in Winnipeg will not be commenced until next fall, but that operations will be carried on throughout the winter. The Rat Portage Co. are this spring expending about $20,000 in improving their manufacturing plant at Rat Portage.

—Oliver Haywood is erecting an extensive saw and planing mill at Whycocomagh, C. B. It will be operated by steam, and when completed will be the largeat mill in Cape Breton. The boilers and engines are from the works of I. Matheson & Co., New Glasgow, and the other machinery was supplied by the Robb Engineering Co., of Amherst, N. S.

—C. H. Witthun, of Hepworth Station, Ont., is removing his saw mill from Shallow Lake to Wiarton. The other saw mill at Hepworth, formerly owned by C. H. Witthun & Co., has been converted into a factory for manufacturing crokinole boards and other small woodenware. The merchantable timber in the vicinity of Hepworth is almost exhausted, and consequently the owners of mills are looking for new locations. J. E. Murphy will remove one of his mills this summer, and the other one about a year later.

—As indicating the fluctuation in the minds of those owning timber lands in Nova Scotia regarding their value, the following is given: N. N. Bentley, of Five Islands, purchased what is known as lot 6, of Garish Grant, from Mark Fulmore, for $1,000. This same block was part of a block of land that some years ago was sold for $125. Mr. Bentley bought it a few years ago for $140, lumbered it and sold it for $250. The other day he bought it back for $1000. Mr. Bentley also purchased the timber on the lot adjoining. About fifteen years ago the lot was sold to John W. Graham for $400. Mr. Bentley gave $3,000 for the timber of the property. He expects to cut thereon four million feet.

—Speaking of the export lumber trade, John Hendry, manager of the Hastings Sawmill Co., Vancouver B. C., said the prospects were never brighter. In his opinion all the concessions now being granted to European powers by China mean the construction of railways, and where railways are constructed there will be found Pacific Coast lumber. At first it was thought that the lumber for the Chinese railways would be sent from Russia, but the Russian lumber was found to be too brittle for railway construction, and instead of shipping lumber Russia is now importing it from British Columbia and Puget Sound for the Trans-Siberian line. Then the Austrailian trade is better than it was, and Mr. Hendry predicts that it will be still better when the federation of the Australian colonies has been completed, as it will be easier for Canada to make reciprocal arrangements with a united colony than with several small ones.

—Mr. Edmund M. Walker recently read an interesting paper on "Forest Trees of Canada" before the Canadian Institute, Toronto. In opening Mr. Walker gave a brief account of the extent of the burnt areas of forest land in Canada, the resulting evils being more than the mere loss of timber. As an instance of this, a comparison was made between the present climatic conditions and the lessened population of southern Europe and eastern Asia with those of twenty centuries ago. This great change is largely due to the clearing away of the forests, and it was shown that Ontario has already suffered to some extent in the same way. In the Maritime Provinces, however, the effect of the removal of the woods is quite different, the soil of the clearings being made wetter than it originally was by the coming in of the sea air. The distribution of the various forest belts in Canada was then given, with brief descriptions of the appearance, habits and geographical range of the various trees. Most of the forests of Canada are included in an immense belt called the sub-artic forest belt. The remainder were grouped into those of the Maritime Provinces, Quebec, Ontario, the Rocky and Selkirk mountains, and the Pacific coast. The paper was illustrated by lantern slides, showing twenty-five or thirty species of Canadian trees.

Mr. Erastus Wiman, on behalf of some friends in Canada, has presented to Governor Roosevelt a bicycle made entirely of Canada ash, and called the "Wooden Beauty."

A copy of the second annual report of the Forestry Reserve Board of the State of New York is to hand, and found therein are details of what has been done towards establishing a forest reserve. The board was organized in April, 1897, and an appropriation of $1,000,000 made for the purposes specified in the Act. This was supplemented at the legislative session of 1898 by a further appropriation of $500,000, making a total of $1,500,000 thus far placed at the disposal of the board for the purchase of forest lands, and for the expenses incidental thereto. Up to December 31, 1898, the state had acquired title by purchase to $259,634\frac{93}{100}$ acres of forest land in the Adirondack Park, for which there was paid, in the aggregate, $1,108,143.15, or $4.26 per acre on the average.

# WOOD PULP DEPARTMENT

## THE PROCESS OF MANUFACTURING MECHANICAL WOOD PULP.*

By W. A. Hare.

(Continued from March issue.)

Pumps.—The hydraulic pulp grinder is supplied with water under two different pressures. The high pressure is used for pressing the wood against the stone, and varies about 100 pounds per square inch, according to the size of the grinder cylinder and the general practice of the operator. The low pressure is used for backing the piston and follower off the wood, and is only a few pounds per square inch. The high pressure system is supplied by a back-geared triplex pump, such as is shown in Fig. 8. This style of pump is manufactured by the Northey Manufacturing Company, Limited, of Toronto. It is designed for high pressures and heavy service, is well made, and reliable. A centrifugal pump supplies the low pressure service, to which are connected fire-hoses, cleaning-hoses, wet machine sprays, and the low pressure piping in the grinders. In large mills, it is better to install a special fire pump; but for small ones it is more economical to pipe direct to the low pressure system, and use a slightly larger pump than is required for ordinary purposes. Fig. 9 is a very good type of a centrifugal pump. It is made especially for this service by the Northey Manufacturing Company. A good feature about this particular style is its reversability, which greatly simplifies its installation. Stuff pumps are used to handle the mixed pulp and water, and for mechanical pulp the centrifugal pump is very satisfactory. A pump as is shown in Fig. 9 is suitable for this purpose. Stuff pumps handle the pulp in a large amount of water; generally the water contains 1 per cent. of dry pulp by weight. The speed and hose power required for these pumps depends on the elevation of the discharge orifice above that of the suction. Many mill designers prefer to drive the pressure and stuff pumps by belt from the grinder shaft. In small mills this may be as good a method as any, but it is open to serious objections. Owing to the varying conditions under which the grinders are working, the speed cannot be kept constant, resulting in a varying discharge from the pumps. In the case of the stuff pump this is objectionable, as it causes trouble for the wet machine man in regulating the supply of stock from the vat. The best method of supplying the high pressure system is to do so from a separate triplex pump belted to each grinder shaft. If there are two grinders coupled together, a 3" x 4" triplex, at 45 revolutions per minute, would supply them. This may cost more than one large pump intended to supply all; but if that pump is shut down by accident or otherwise, the load is immediately thrown off all the grinders at once, which allows them to speed up.

It is exceedingly dangerous to allow any grinder to run

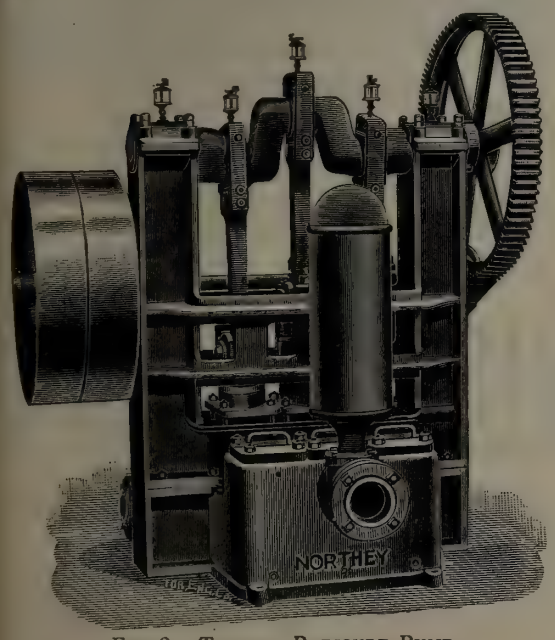

Fig. 8.—Triplex Pressure Pump.

very much above its normal speed. Owing to cracks in the stone which are not always apparent on the surface, a stone may fly in pieces even at moderate speeds, and is very liable to do so if the grinder is allowed to run away. By supplying all the grinders from a common pipe system, and driving a separate pressure pump from each grinder shaft to supply the system, we have each grinder perfectly independent of the others, and we are, therefore, at liberty to shut down any one we please without regard to the others. When a grinder is started up, its pump is started also, and takes its share of the pumping, and we always have the supply directly proportional to the demand. If a pump in the line should become disabled, its check valve, placed on its discharge pipe, instantly closes, cutting it out of the system. The remaining pumps can, for a short time at least, carry the increased load, giving the grinder man sufficient time to shut down the grinder, or to cut out a pocket or two. The grinder which was driving the disabled pump has had no opportunity to race, as the other pumps in the line continue to supply its cylinders with water at almost the usual pressure. This system has, perhaps, the disadvantage of first cost, but even in this particular, when everything is considered, it would be the cheaper method for some installations.

Method of Driving and Coupling Grinders.—

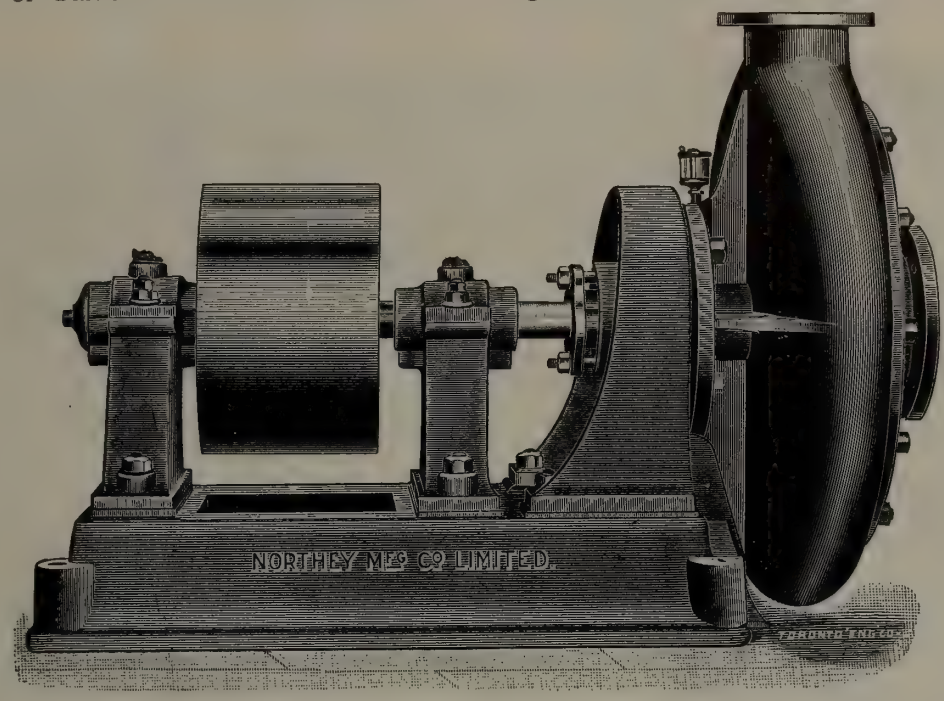

Fig. 9.—Horizontal Centrifugal Pump.

Wood pulp grinders are generally run in pairs, coupled direct to the water wheel shaft. Direct driving is the usual practice, which is seldom if ever departed from. In some small plants it might be advantageous to drive a grinder by means of a large belt, but these cases are extremely rare. There is no other method that is practicable. Gearing would be out of the question, as the sudden and excessive variations in the load would render it extremely difficult to keep them in proper repair. In most cases, the only method that commends itself is to couple two grinders on the same shaft, and direct to that of the water wheels. With a certain head, for instance, the wheel that will run with a speed of about 200 R.P.M. would deliver more power to the shaft than is required by one grinder. If another grinder, of suitable capacity, is coupled to this shaft, it gives the correct speed and power for each grinder.

There is another consideration in favor of the above method of driving. If two 3-pocket machines are run by themselves from separate wheels, only two of these pockets can be used at a time on each grinder, the third being retained as a change pocket. If, on the other hand, we have two 3-pocket grinders connected on the same shaft, we can operate 5 pockets altogether, leaving the other one for the change pocket. In this way we have gained the use of an extra pocket on two machines by driving them coupled.

When a stone breaks on the inside machine, both will be idle until repairs are completed. If the outside grinder be damaged, the coupling can be removed, and the inside one run as usual.

Operation.—The first thing in starting up a grinder is to thoroughly clean it with a hose. This is to prevent specks from getting into the pulp from dirt collected in the grinder. This should be done once a week, or oftener, according to the make of the machine. The side plates of the pocket should be set down close to the stone, and, as the stone is turned down by sharpening, they should be advanced. A great deal of waste from chips and slivers will arise if this is not attended to. It is important that the supply of water should be sufficient, for two reasons: first, to keep the stone cool, and, second, to supply the ground wood with enough water so that it can be handled easily by the stuff pump. In some grinders the stone runs clear of the water underneath it, and must, therefore, be supplied by sprays near the top, or elsewhere, to keep the stone from heating. In others, the stone runs in a vat of ground pulp and water, which, as the water is changing all the time, prevents heating very effectually. There should be, even in this case, a small spray near the top of the stone, for the purpose of washing the pulp down to the vat as soon as it is ground. The vat underneath the grinder is made by placing a wier on one side, of a suitable height, so that when the pulp and water flow over it, the stone is submerged to a sufficient depth to prevent heating.

When the wood has been badly packed in the pocket it will jam, and, by bracing against the sides of the pocket, relieve the stone of the pressure. This is easily fixed by letting off the pressure while the wood is loosened up with a short bar, and then turning the water on again. This jamming is not so liable to occur with round sticks as it is when the wood has been split. Sometimes, with round wood, the blocks will roll in the pocket. This can be prevented by having strips cast on the follows. When this is not done, it can be remedied for the time by loosening up the pocket, or by repacking. In a good grinder there should be very few chips formed. In many cases, in fact nearly all, this is caused by carelessness in setting the side plates of the pockets. As the wood grinds down to a thin shim, it is carried under the plate, and is not ground. If the plates are just clearing the stone, the wood will be almost completely ground before the shim can get through. Grinders should be provided with sufficient space between the stone and the sides to allow for the free escape of pulp and water, or else it will flow over the floor when the door is opened. This space should be so constructed as to prevent shims, etc., getting in, which might cause trouble. In some mills machines are used for grinding chips and shims, but, as far as the chips from the grinders are concerned, it is unnecessary unless the grinders are faulty. In any new mill, if good grinders are bought, this will not be required.

The principal agencies that influence the quality of the pulp ground from any given wood are, speed of the stone, pressure used to press the wood against the stone, and the sharpening. The first two have considerable influence, and should be carefully looked after; but it is in the sharpening that the secret lies for the manufacture of a good uniform product. The influence of the speed is important, and the best practice is not to exceed a circumferential speed of 2,800 ft. per minute, which corresponds to about 200 revolutions per minute on an ordinary sized stone. It may go higher than this at intervals, but it is not good practice to grind at a much increased speed. When the stone is running too fast, apart from any danger from bursting, there is a tendency to heat the surface, which cracks when it is chilled by the water, and so destroys the cutting surface of the stone. This is only true when the speed is excessive, but even if running normally at a speed much exceeding 200 revolutions per minute, there is a tendency to gloss the stones, which is detrimental to its cutting capacity. With a slow speed, the wood is pressed completely into the stone, and thereby a longer fibre is produced.

With regard to the pressure used, there seems to be a great difference of opinion among pulp manufacturers, but heavier pressures are of more common use now than formerly. To increase the pressure is, in nearly all cases, to increase the output of the grinder, provided that the power is sufficient. In some of the Nova Scotian mills a pressure of about 15 pounds per square inch is used on the grinding surface. This seems to be an average, though for special products it may be as high as 17 pounds per square inch of the cutting area. It is seldom allowed to drop below 13 pounds in any case.

The question of sharpening is also one upon which many different opinions may be expressed; but no attempt will be made to specify which is correct, the writer simply giving his own experience. In sharpening for different products no rule can be laid down; each man has a way of his own which he thinks is the correct one. One fault that is often made is to use one jig too often. This, after one or two cuts are made, does not improve the surface, as the points on the jig run in the same holes. For "news" pulp the writer has found an 8 to the inch jig to work first-class, also a 6 to the inch is another good size. A good surface is made by making a light cut with a 4 to the inch jig over the other size, which breaks the holes and makes a more uniform surface. If the same jig is used too often it will make a pitted surface, which is not a good cutting one. Over-sharpening is a thing to be guarded against, as in that case the pulp is inclined to be short in the grain, or mealy, is hard to screen on account

* Paper read before the Engineering Society of the School of Practical Science, Toronto, and published by permission.

of the thickness of the fibres, and is difficult to remove from the wet machine, as the sheet will not hold together. When a stone has been over-sharpened by carelessness or otherwise, it may be restored by simply rubbing the surface with a brick. Some pulp makers prefer to sharpen this way, i.e., by over-sharpening at first and then reducing the cuts on the stone, by means of a brick, until the right degree is reached.

A very good point in the construction of a grinder is to have the stone accessible while in operation. Some machines have to be stopped and certain alterations made before the stone can be sharpened. While this is being attended to, the opportunity is generally taken to clean them out, and in this way the disadvantage of not being able to sharpen while running is in some manner counteracted. The sharpening jig is a cylinder of steel, about 3½ of steel, one on each side of it. These flanges are turned true on their face and are threaded right and left hand on the shaft. By this method the torsional strain on the stone due to the grinding tends to make the flanges grip tighter. There are two principal methods of securing the stone to the shaft, one being an improvement on the other. The first method is to screw the flanges up as tight as possible, taking care that the stone is centered, and then to pour in cement around the shaft and flanges, through a small channel which had been previously cut in the stone. This method is in use in the majority of cases and seems to answer the purpose very well. The second method is very much like the first, but in addition to the cement and threaded flanges, the flanges are bolted together by 1-inch bolts, running through the stone from side to side, which are tightened up before the cement has become hard. When the cement has set perfectly hard the stone can be turned off and trued up. The addition of the bolts in the second method adds considerably to the strength and solidity of the whole machine as well as providing a safe-guard against bursting. For this purpose alone, it would almost be advisable to introduce them.

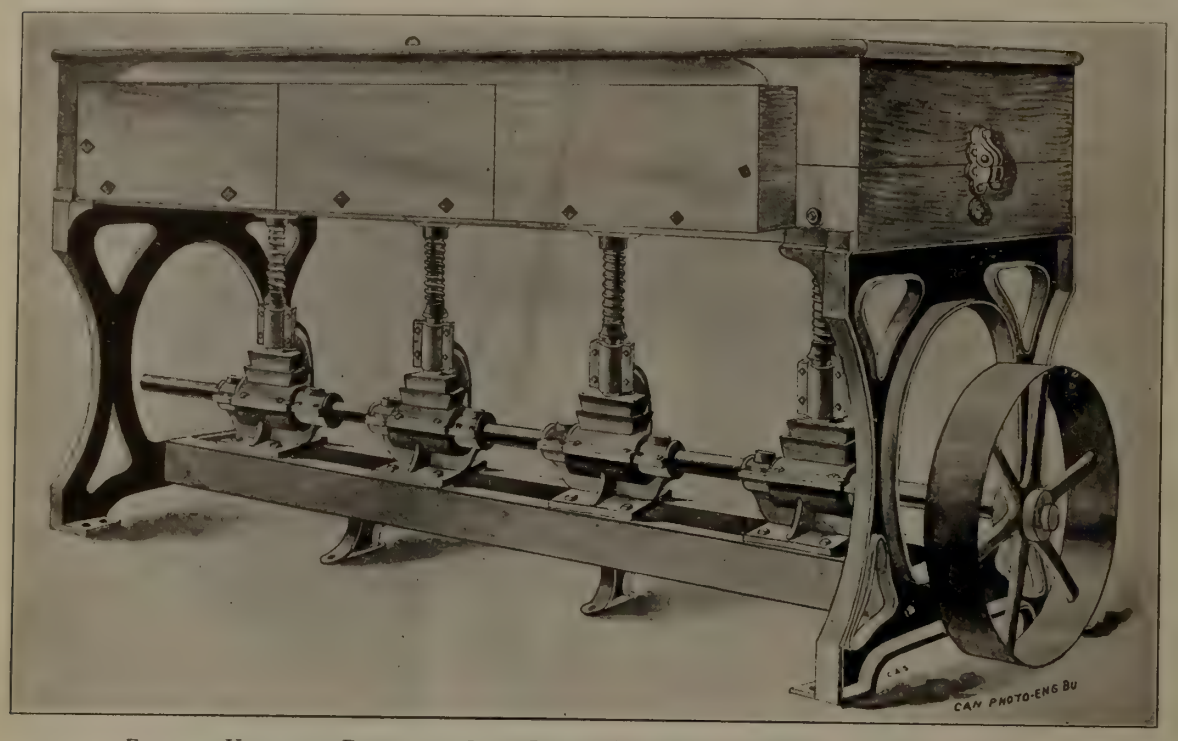

FIG. 10.—VIBRATING DIAPHRAGM PULP SCREEN (MANUFACTURED BY JENCKES MACHINE CO.)

inches long by 3 inches in diameter. It is cut on its surface by a heavy V thread, and also milled parallel to its axis by an equally heavy V cut. The resulting surface consists of a number of square, sharp-pointed pyramids. The jig is drilled throughout its length with a 1-inch drill, and mounted in a frame by a bolt passing loosely through this hole, so allowing it to revolve freely thereon. The frame also has on it a forged ring, which is made to engage a bolt on the grinder frame. This bolt passes across the face of the stone, and a few inches from it. The frame has also a suitable handle, by means of which it is guided by the workman. In operation, the bolt is passed through the ring and secured in the grinder frame. The workman can now girdle the jig across the face of the stone, against which it revolves. By bearing on the handle the pressure is applied, which causes the points of the jig to cut the face of the stone, making on it a rough pitted surface.

METHOD OF CHANGING AND MOUNTING STONES.—The stone is secured to the shaft by means of large flanges

SETTING STONES.—When the stone is set in, it is very irregular on its surface, and must be turned off true before using. For this purpose an attachment is used which in its motions resembles the slide rest of a screw cutting lathe. It consists of a frame, which is placed on the grinder base, where it is bolted down firmly. On this frame there runs a carriage which is moved laterally across the face of the stone by means of a screw and hand wheel. Mounted on this carriage is a similar one, which moves at right angles to the surface of the stone, and is actuated also by a similar screw and hand wheel. On this top carriage is fitted a jig, similar to that used in sharpening, though generally a dull one is selected for turning off a stone. With this machine a stone can be turned down to the required size, and made true on its face. It is best in turning off a stone to make the face slightly crowned or else to turn down near the edges more than at the centre. This prevents to some extent the spauling of the stone from the pressure of the wood. Great care must be taken that in turning down the stones no cracks are made in it, for, if any exist, the piece will very likely fly out when the pressure is applied. This, of course, will ruin the stone eventually, even if it is a small piece, as when one piece is broken out, others quickly follow. It is bad practice to run a stone after it has been spauled. In handling the stone when bringing it into the mill, it should, if possible, be slung from a carrier by ropes passing through its centre hole. As this is not provided for in many mills, the next best thing is to roll it on strong palnking, taking care that it is only bearing in the middle of the face and not near the sides. It should, in all cases, be eased by ropes and blocks, so as to have it at all times under control. If care is taken, a stone can be mounted without the edges becoming spauled more than will be completely removed by turning down and trueing.

DESCRIPTION OF SCREENS.—When the pulp and water leave the grinder, it flows along the troughs placed underneath the floor of the grinder room to the large trough, into which every grinder discharges. In this large trough are sprays, which supply sufficient water for the pulp to flow along it. At the end of this trough is placed a large tank covered over with iron plates, which are perforated

EXTRAORDINARY
We are cleaning up numerous yards in connection with our Mills in the South, to make room for next year's new cut.
Stock consists of all grades and thicknesses Hardwood Lumber, Yellow Pine and Cypress, including a big surplus of No. 1 and No. 2 Common Yellow Pine, Select and Common Cypress. All of the above a year and over dry.
If you are in the market for any kind of Hardwood Lumber, Yellow Pine or Cypress, or expect to be in the future, send us your enquiries. The stock has to be moved, and if we can pick your orders out of any of the lots referred to, we will quote you prices to save additional handling expenses.

with holes about ¼-inch in diameter. The pulp and water falls on this screen, and flows through to the tank underneath, while all large splinters, chips, etc., are collected on the perforated plates. The stuff pump draws the pulp from this tank and discharges it in the large trough in the wet press room. The screen of plates prevents any large pieces from entering the stuff pump, which would cause trouble if allowed. The trough into which the stuff pump discharges is made of 2½ inch pine planks, its size depending on the capacity of the mill. A 15 ton mill would require one about 20 in. wide by 24 in. deep. This trough runs the whole length of the wet machine room and is tapped, at intervals, for each screen. Each outlet is provided with a trap gate, or if the outlets are wrought iron pipes, a valve is used. It is also necessary to provide the trough with an overflow connected to a pipe running back to the tank in the grinder room. This will be found extremely useful in case of a stoppage in the wet press room, if the stuff pump is not driven from the same water wheel as the wet machines. From the large trough the pulp is led to the vibrating diaphragm screens, a cut of which is shown in Fig. 10. This type of screen is in general use in America, and has been found very satisfactory. The machine is manufactured by the Jenckes Machine Co., of Sherbrooke, Que. These screens are built to contain ten or twelve plates as desired, the usual size of the plates being 12x36 inches or 12x40 inches. The cradle, or frame containing the screen plates, is hinged to the water box, and when raised, permits the cleaning or examination of the plates. The water box is built with a partition in the centre, forming two compartments, each of which is provided with a diaphragm, supported on two vertical spindles passing through the guides, shown in the cut, and carrying the knockers, or cam shoes, at their lower ends. The usual flexible connection between the diaphragm and the sides is affected by india rubber. The stock box is bolted in front of the water box and is provided with a brass valve for regulating the supply of stock. The side frames are of cast iron, connected by an angle iron distance piece, which carries the bearings for the cam shaft and which is also provided with stands underneath, thereby considerably reducing vibration. The bearings for the cam shaft are babbitted and are placed on either side of each cam. These cams are made to give from one to four throws per revolution according to the speed of the cam shaft. The arrangement of the cams with relation to the diaphragms is such as to insure a constant strain on the driving belt. Springs are placed on the vertical rods, which keep the knocker always in contact with the cam, thereby avoiding vibration and noise. The usual speed of the screen is about 350 to 400 vibrations of the diaphragms per minute.

The screen plates are cut in fine slits. The size of these slits will vary according to the stock to be screened. For fine stock the cuts will be from .012 inch to .014 inch, though larger sizes are more usual. The capacity of these screens varies with the speed. At a speed of 600 R. P. M. they should screen 5 tons of well ground stock per 24 hours. In operation the upward movement of the diaphragm forces air and water up through the cuts in the plates, thereby cleaning them. On drawing down again, the pulp and water are sucked through the slits, and that which will not pass through remains on the screen plates. Sufficient water is necessary to keep the pulp in suspension.

## PULP NOTES.

Several English capitalists were at St. Stephen, N.B., last month looking over the available sites for a pulp mill. Options on the water powers of Sprague's Falls and Grand Falls have been secured for the syndicate by Mr. David Maxwell, C.E.

Mr. Chas. Burrill, of Weymouth, N.S., recently returned from Great Britain, where he endeavored to interest British capital in the pulp industry in Nova Scotia. He expects that arrangements will be completed at an early date for the building of another pulp mill on the Sissiboo river.

Mr. W. W. Fisher, a pulp mill expert of New York, with Mr. Nailer, have gone to England for the purpose of promoting a company to engage in the manufacture of pulp at Parrsboro, N.S. Mr. Fisher has recommended the construction of three 35-ton pulp mills, with a paper mill in connection.

At a meeting of the shareholders of the Cushing Sulphite Fibre Co., held in St. John, N.B., recently, Capt. Edward Partington, of Manchester, Eng., was elected president; Joseph Allison, vice-president; J. S. Gregory, secretary-treasurer, and Geo. S. Cushing, managing director. It was stated that Capt. Partington had agreed to take two-thirds of the stock of the company, and that plans for the pulp mill were being prepared under his supervision. The work will be proceeded with during the coming summer.

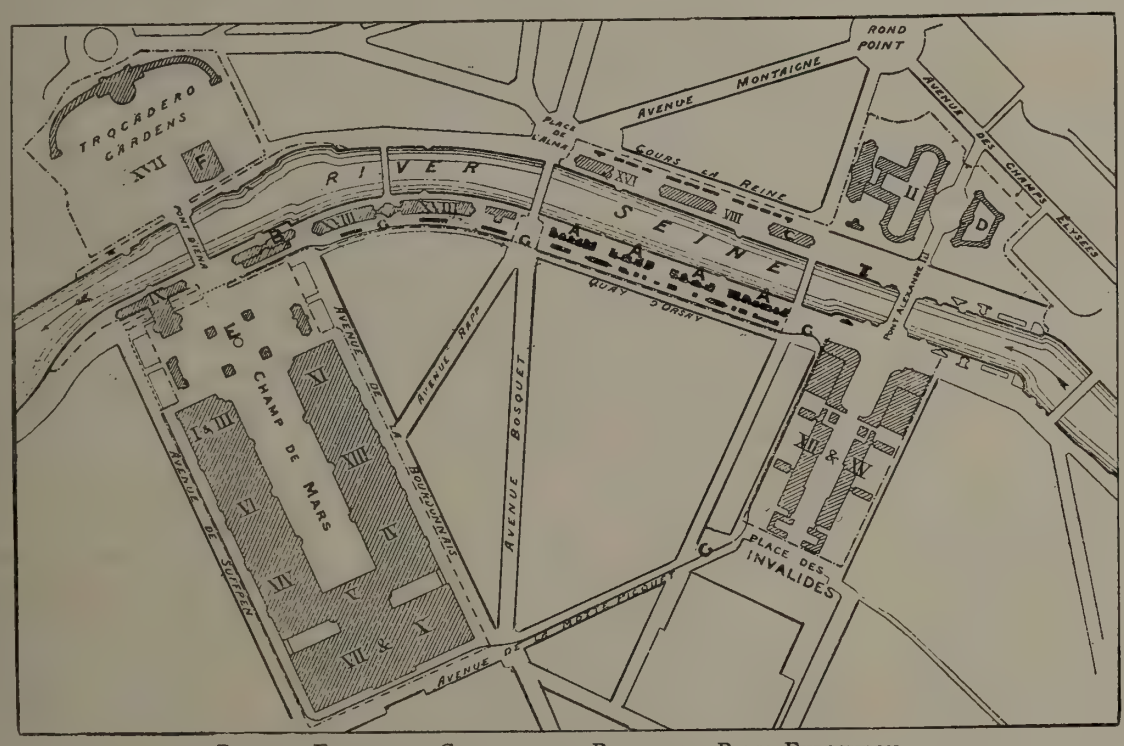
## REGULATIONS OF THE PARIS EXPOSITION.

The Canadian Commission for the Paris Exposition of 1900 have issued a booklet giving regulations, classification of exhibits, and general information for intending exhibitors. The accompanying plan, which is herewith reproduced, shows the arrangement of the Exhibition grounds and buildings, and will no doubt be found of interest. The Exhibition will open on the 15th of April and close on the 5th of November. The Colonial building will be situated on the Trocadero grounds overlooking the Champs de Mars, not far from the Great Eiffel tower, and will cover 36,000 square feet, of which 27,100 feet has been allotted to Canada.

Forms of application for space must be returned to the Canadian Commission, Department of Agriculture, Ottawa, not later than June 1st, 1899. It is the desire of the Commission to secure the best possible exhibit of Canadian goods, and there will be no charge to exhibitors for space. Accepted exhibits from Quebec, Ontario and the west must be delivered at the exhibitor's expense at Montreal or Quebec not later than November 1st, 1899, and exhibits from the Maritime provinces at Halifax, N. S., not later than November 15th. These will be shipped to Paris by the Commission free of charge. Exhibitors are expected to dispose, in Paris, of their exhibits when these have a commercial value, as only valuable collections of objects of special character will be granted free return transportation. The exhibits are divided into eighteen groups, which are again subdivided into numerous classes. The Forestry exhibit is placed in Group nine, which includes forest, sport, fishing and gathering wild crops. There are two sub-divisions relating to forestry, and numbered classes 49 and 50. Class 49 includes appliances and processes used in forestry, as follows: Collection of seeds; specimens of indigenous or exotic forest products; special implements for gathering, preparing, testing and preserving seeds; drying-houses; implements for nurseries; appliances for tree cultivation and forestry; processes of nursery culture; processes of the cultivation and management of forests; forest topography; forest works, keepers' houses, saw mills, means of removing cut timber, drainage, re-planting; terracing; planting with trees, turfing, etc.; planting for arresting the shifting of dunes.



PLAN OF EXHIBITION GROUNDS AND BUILDINGS—PARIS EXPOSITION.

Class 50 includes products of the cultivation of forests and of forest industries, namely: Specimen of all kinds of forest products; wood for cabinet work and for construction purposes; wrought wood; staves and cask wood; lath wood, wood for dyeing purposes; cork trees; bark for textile purposes; tanning, fragrant, resinous substances, etc.; products of forest industries; turnery, basket work, esparto manufacture; wooden shoes, wood wool, corks, dried woods, charcoal, raw potash, etc.

Group 14 and class 88 includes materials, plant and processes for the manufacture of paper. In this class are placed apparatus and processes for making pulp; mechanical wood pulp, grinding, purifying and drying; chemical wood pulp, semi-chemical pulp, etc.

Group 4 and class 22 includes wood-working plant, such as saws for cutting trees, for cutting up timber with the bark on, for shaping, etc; machines for squaring timber, planing machines, lathes, drilling and slotting machines; machines for making tongues and grooves, tenons and mortices; shaping and copying machines, machine fittings; machine and hand tools specially used in wood-working; machine tools which do not come under any special classification.

---

A curious instance of dwarfism in pines is recorded by C. E. Bessey, of the University of Nebraska, who states that on Green Mountain, near Boulder, Col., he found in a crevice of the rock at the summit a pine tree less than 3 inches high and 1/5 inch in diameter. It had no branches, and bore a single tuft of needles at the top. Nevertheless, it showed 25 distinct annual rings, making it presumably 25 years of age.

## THE NOVA SCOTIA LUMBER COMPANY.

The Nova Scotia Lumber Company, whose office and mills are at Sherbrooke, N.S., is about the largest operator east of Halifax. Over one year ago their saw mill was burned, and during last winter they rebuilt, and have now a very finely equipped plant for the manufacture of lumber, everything except the boilers (which were good and not injured by the fire) being new and up-to-date, thus enabling them to manufacture a greater quantity of lumber at less cost than under the conditions previously existing. The engine is a 350 h.p. Brown automatic cut-off, supplied from four large boilers about 50 feet long. The mill contains one live gang, i.e., for sawing the log in the round without first slabbing, a circular saw rig, patent edger, and the necessary trimmers, picket and lath machines and planer and matcher. The sawdust, bark and mill refuse are taken by a chain about 400 feet away from mill, where it is burned. This chain is arranged and carried through the mill so that the refuse from any part of the mill can be delivered to it directly from the different machines, in this way saving labor and keeping all parts of the mill clean. The capacity of the gang is above the average mill. On August 4th it cut 105,640 superficial feet in nine hours, and on September 13th 58,025 feet was sawn in the afternoon. The circular has a capacity of 30,000 superficial feet per day, and lath machine from 50,000 to 60,000 pieces.

The company had some 5,000,000 feet of logs held over from last year, and their output in the winter of 1897 was about 10,000,000 feet, which gave them a fine stock, but owing to the depressed markets for spruce lumber they only sawed last season about 12,000,000 feet, preferring to hold some stock for early spring sawing. They employ in the neighborhood of 100 men in their mill and yards. Equipped as they are with gang and circular, they can saw deals, timber, planks and boards to any specification. This year they have sawn principally English deals.

The company own extensive limits of the very best spruce on the St. Mary's river and its tributaries. They also own some fine hardwood timber, which eventually, if not in the near future, will be very valuable. In addition to the limits referred to, the company own a large limit at Economy and have large interests in Cumberland county, near Shulee, which they are not operating at present.

The company is composed of financially strong men, and some of them are the most practical and successful lumbermen in the eastern provinces. John W. Seaman is the manager and G. K. Prescott assistant. Hon. W. T. Pipes and Dr. Hewson, of Amherst, John Gillespie, manager of Prescott, Gillespie & Co, Shulee, and Job Seaman, Barronsfield, are members of the company.

Sherbrooke is about 140 miles east of Halifax, and very prettily situated, 6 miles up the St. Mary's river. The nearest railway station is Antigonish, 40 miles distant.

---

## IT IS GOOD VALUE.

Mr. John Stanford, of Chester, Nova Scotia, writes regarding the CANADA LUMBERMAN: "The weekly number is worth the amount to any one in the business."

## UNIFORM INSPECTION RULES FOR LUMBER.

OPINIONS ON THE SUBJECT FROM SEVERAL MEMBERS OF THE TRADE.—THE ADVANTAGES OF STANDARD RULES GENERALLY ADMITTED. — DIFFICULTIES OF THEIR ADOPTION ENUMERATED.

WITH the object of learning the views of the lumbermen of Ontario on the subject of adopting uniform rules for the inspection and grading of pine and hardwood lumber, letters of enquiry were forwarded by the publishers of this journal to several members of the trade. The questions asked therein were as follows :

1. Do you consider that the adoption of standard inspection rules would be in the interest of the lumber trade of Ontario ?

2. In what way, if any, has the absence of such rules been a disadvantage to the lumber trade in the past ?

3. Could rules be compiled which would serve all sections of the province, and apply to export as well as domestic trade ? If not, why ?

4. How, in your opinion, could the adoption of uniform rules best be acccomplished ?

5. Would you be willing to co-operate in a movement to secure standard rules?

Below will be found the answers received up to the time of going to press :

MICKLE, DYMENT & SON, Barrie : " 1. Yes. 2. Disputing qualities has given lumbermen considerable trouble. 3. We think it could be done, because then lumber would be sold according to the inspection. 4. By the Lumbermen's Association taking it up and agreeing upon the qualities. 5. Yes. "

H. CARGILL & SON, Cargill : " We would not join in a movement to secure standard rules and inspection of lumber for the Province of Ontario. Every lumberman has his own method of manufacturing and selecting his own lumber, and fixes his prices according to the quality of lumber thus selected. "

R. LAIDLAW & CO., Toronto : " It is certainly very desirable to have uniform rules for the inspection of all kinds of lumber. We are given to understand that at a meeting of the Lumbermen's Association held a short time ago, a committee was appointed to prepare rules of inspection and present them to the Board. "

THE RATHBUN COMPANY, Deseronto : " We heartily approve of bringing the rules governing the inspection of hardwood to the same standard as those existing in the United States ; in fact, we think the national rules in the United States for governing the inspection of hardwood lumber should be adopted by Canadian lumbermen. "

WHALEY LUMBER CO., Huntsville : " 1. We think standard inspection rules would be a benefit. 2. In so much difference of opinion as to goods. 3. If we had established inspection rules, foreign countries would buy according to the Canadian inspection. 4. Compare the market with the kind of lumber we produce and make the rules statutory. 5. Yes.

J. & T. CONLON, Thorold : " We are not much interested in the question, as we do not sell our lumber in cargo lots at the mill, and generally log run, the buyer doing the grading himself. Would say, however, that we would like to see a system in this country of definite uniform grades of lumber, as it would avoid many misunderstandidgs, and we hope that action will be taken in the matter."

KEENAN BROS., Owen Sound : " 1. Yes. 2. Because the quality should govern the price, and in the past each dealer and mill man, when shipping, has had to agree on the grade between themselves, instead of referring to a standard authority that both should be bound to abide by. 3. Yes ; there should be no trouble in the Province, and we could make sales as per provincial inspection, instead of having to agree on rules enforced at destination. 4. Only by the co-operation of mill men and dealers, who would both have to abide by the rules. 5. Yes. "

W. J. SHEPPARD, manager Georgian Bay Lumber Co. : " We do not consider that it is possible to adopt a standard of inspection that could be carried out by all the various lumbermen in Ontario, for the reason that we do not believe there are any two lumbermen at the present time who inspect their lumber the same. In many cases they have separate and distinct markets to supply. The grading called by the same name in one section would not at all suit the demands of another section. In buying lumber in this country, the grades shown, and the prices asked, are taken into consideration before the purchase is made. Under the circumstances, we therefore think that uniform rules could not be adopted at the present time. "

C. BECK MFG. CO., Penetanguishene : " A national rule for inspection is much needed, as up to the present time nearly everyone has had an inspection of his own, and the buyer does not know what he is buying unless he sees the lumber himself. I brought this matter up at the Lumbermen's meeting some time ago, to have a uniform inspection and grades of lumber. Mr. Toner, of Collingwood, was instructed to work out a scheme for different grades of lumber. In the North-west they have uniform inspection rules, and I sent Mr. Toner a copy of their rules to help him in his work. If national inspection rules could be made for both Canada and the United States, it would be much better, and I would be greatly in favor of it. "

LONDON LUMBER CO., London : " We are most anxious that some definite steps should be taken to put the lumber business on a proper footing. Our trade is in hardwood lumber altogether, and we are of the opinion that if the United States adopt a national rule of inspection, as proposed, that Canada should adopt a standard Canadian rule of inspection. Of course, if such a rule were adopted the quality of the products of the Canadian forests would have to be taken into consideration, and, we believe, this would apply to pine as well as hardwoods. A rule of this kind could only be adopted by co-operation. By co-operating, an act of legislature could likely be put upon the statute book. We are in favor of provincial rules of inspection, and would like to see the rules the same for the domestic trade as well as the export trade. The forests of the United States are thinning out proportionately as fast as they are in this country, and it would be an advantage to both countries to have an international inspection rule. We would be willing to co-operate to a certain extent to bring about this result. The most important question that you ask is No. 3, and we are of the opinion that if inspection rules were properly laid down, the export trade would have to take the lumber at our inspection. At the present time the business is frightfully hampered for the want of a uniform rule of inspection on the other side. Our experience is that no two houses inspect alike."

PICKARD & ROWAN, Owen Sound : " As we handle hardwoods almost exclusively, our remarks must be confined to such timber as goes under the head of hardwood lumber. We believe that so long as mill-men have their lumber go to the consumer through dealers, there is an absolute necessity for rules to go by in the buying and selling of such stock, and we do not see any reason why a uniform standard of rules would not be an advantage to all concerned. The absence of standard inspection rules have, we believe, been felt most by dealers, rather than by manufacturers, as they have frequently to sell lumber named as a certain standard, in an American market, and buy it on a Canadian market, where the standard of the same name means quite a different grade of lumber; hence, when the stock that is bought on a Canadian rules of inspection arrives at its destination, there is frequently trouble. Then there is delay in getting a settlement, sometimes expense in going to arrange same, generally a compromise, and very often a straining of business good feeling. Of course, the manufacturer has to bear a part, at least, of this expense, indirectly anyway, as the dealer has always to count on having more or less of these experiences, so long as the present conditions exist. We do not see any reason why a standard of rules could not be compiled that would be satisfactory to all sections of the province, but our experience is quite circumscribed in this respect. In reference to question 4, it is our opinion that so long as lumber is sold, bought and inspected by men, and not by machines, there will not be rules that will be strictly observed by buyer and seller. Mill-men might as well try to establish uniform rules in buying logs, and if there is any one thing on this green earth that cannot be done, it is this. If there is any project brought to our notice that we think has a chance of securing a uniform standard of rules, we would be willing to co-operate with its promoters in the securing of same. "

THE ORILLIA EXPORT LUMBER COMPANY, Orillia : " 1. Yes, most assuredly it is in the interests of the trade that such rules should be adopted. 2. The particular and most important disadvantage has been in quoting prices by letter. The holder of stock who is satisfied to call a grade by its right name, and make his price accordingly, very often suffers to the gain of he who is willing to sell one thing and supply another. 3. Rules could certainly be made which would serve to govern the trade in this Province as well as all the Provinces, and we see no reason why they could not be made to govern our export trade as well. All that would be required would be that the buyer and seller understand thoroughly that the transaction is based on some certain rules of inspection. 4. By the formation of an Association for the express purpose of making rules governing the inspection, and securing a sufficient number of manufacturers and dealers as members to insure said association sufficient strength to protect its members. It would be also well to have some licensed inspectors, said license to be given after the inspector had qualified a board of examiners. Then, in case of dispute between buyer and seller, one of these inspectors could be called on to make an inspection and make affidavit as to its correctness, when the matter, as far as the quality of the lumber was concerned, could be considered as settled. If the American lumbermen succeed in establishing national rules, it would be well, since we trade so largely with them, that the rules were as nearly like theirs as our surroundings and conditions permit. 5. Yes ; we will be most pleased to do all we can towards establishing such rules, and feel that we cannot get them too soon."

MACPHERSON & SCHELL, Alexandria : " 1. We would decidedly agree to endorse standard inspection rules applying to this country, and if the rules applied to, or corresponded with, the national inspection rules of the United States, so much the better. 2. The absence of inspection rules in Canada has not operated against the Canadian trade generally, nor in any case where the American inspection or New York inspection is understood. In many cases where an order may be placed, (such for instance, as the following : 100,000 ft. of 1sts and 2nds basswood, 7½" wide x 12/16 feet long) if the party selling does not understand the rules, he will find the buyer is entitled to call for every inch of the order absolutely clear, as there are no firsts in the lot, nor can there be, and seconds in this width must be clear. In such cases, unless the mill-man fully knows the inspection rules of New York, he is misled by the term firsts and seconds, and the deal may cause disputes to arise. Well understood inspection rules would prevent this state of affairs. In this connection, however, we would suggest that there should be established some authority of a legislative nature, by which any set of rules would be established upon a higher plane than at present obtains in the trade. 3. We think rules could be compiled to meet the requirements of this question, if our dealers and mill-men would sell only according to such established rules both locally and for export, and in case of export bills make the contract unimpeachable by the buyer, if legislative authority conferred a license upon authorized cullers, who could be asked to inspect shipments and issue certificates. This may be objected to as expensive, and in such cases may result in shippers taking the risks they now must do with no authorized cullers. 5. Yes. "

J. E. MURPHY, Hepworth Station : " While I believe that such legally recognized rules as could be so defined as to be readily and intelligently understood by others, as well as the practically trained lumbermen, would be desirable, particularly to the pine trade, I do not believe that such rules could be readily applied to the hardwood trade. The market requirements in hardwoods are so numerous and so varied that while rules of inspection could be applied in one case, there would be several others in which like rules would not apply. Inspection rules as now adhered to allow so many knots to a board or plank of a certain width in hardwood, and if the number of knots should exceed what the rules call for, the board may be rejected. Now, while knots are as a rule undesirable defects, there are very many uses to which hardwood is put where sound knots do not interfere with the utility of the lumber. I would far quicker reject a piece of clear hardwood with cross-grain than I

would for an extra sound knot or split, if otherwise all right. First and second hardwood rules call for 6" and up wide. Now, what intelligent consumer of hardwood would reject a sound strip of maple three inches wide, when the lumber under inspection is going into a planing mill to be manufactured into flooring. The same thing would apply to soft elm going into a chair factory to be resawed into chair stock. A hardwood saw mill making lumber for the market to be graded first and second, and buying logs in competition with a chair factory in a hardwood locality, or in fact any wood-working industry, could not long continue to be a paying investment for its owner. The tendency now on the part of the hardwood lumber manufacturer is to sell his output mill run. You can scarcely induce a hardwood man to sell his lumber this season common and better, and it is almost impossible to buy firsts and seconds. This is due to the great difficulty in obtaining a market for the lower grades. Of course, I do not wish to be understood as opposed to intelligent rules of grading and inspecting hardwoods for market; in fact, I would be in favor of it. Then let the hardwood men thoroughly understand the rules of grading and put a proper price on their higher grades, which I contend should be high enough to leave the lower grades on the manufacturer's hands at no greater cost than the labor of repiling and caring for the rejects until a market could be obtained. The existence of rules of inspection would be all right for export lumber in hardwoods, and would not prevent our local consumers buying mill run or common or better if it suited their purpose. For years past there has been a lack of sympathy between the price of hardwood lumber and the inspection thereof. I am speaking from personal knowledge of facts. The ruling price for maple, beech, birch and elm for several years past, for New York, Boston, Baltimore and other eastern markets, has been from $12 to $14 per M on cars at point of shipment, according to thickness, New York inspection. Now, I can vouch for the inspection being close and meaning good lumber, but I would not object to that if the price was equally good. No man can afford to put a force of men and teams into a hardwood limit and take out hardwood and sell at such prices without becoming financially involved. When prices of high grade hardwood advance 50 per cent. I will hold up both hands for rules of inspection."

## CONVENTION OF WHOLESALE LUMBER DEALERS.

The seventh annual convention of the National Wholesale Lumber Dealers' Association, which embraces the leading wholesale dealers in the Eastern States, opened in Boston on March 1st. The roll call showed that there were 105 members present, and in addition there was a representation of about 35 from retail dealers' associations. These retail dealers had been invited by the wholesalers to represent their separate associations for the purpose of conferring over subjects of mutual concern to both branches of the business, and, if possible, of creating closer relations between the wholesalers and retailers.

The president of the association, Mr. John N. Scatcherd, of Buffalo, in his opening address, congratulated the members upon the return of prosperity, and upon the fact that a better feeling was manifested between the different branches of the trade. Mr. Eugene F. Perry, Secretary, outlined the work of the past year. He showed the membership on March 1st to be 215, representing a gain of fourteen during the year.

The business transacted at the convention may be divided into three sections—first, the establishing of better relations between the wholesale and retail trade; second, the formulating of a system of discount and time to best serve the lumber trade; third, the adoption of hardwood inspection rules.

In connection with the first question, the Committee on Trade Relations presented a lengthy report which, stated that the creation of the committee had been decided upon on account of representations made by certain wholesale dealers in North Tonawanda, who contended that they had suffered in both volume of trade and percentage of profits by competition from scalpers. The report stated that one great cause of friction between the wholesale and retail associations was the classification of the trade, but this was being gradually overcome by the adoption of a plan of a joint final classification.

The report of the Board of Managers of the Bureau of Information was read by the secretary. It stated that a feature of the year's administration was the inauguration of a special system of reports upon dealers who had contracted the habit of making settlements to suit themselves, ignoring either regular or agreed terms of sale.

The retail dealers, after a conference, submitted a report to the association, which provided that the latter take up and formulate rules to classify the trade into three sections, as follows: 1st, manufacturers; 2nd, wholesale dealers or agents; 3rd, retail dealers or legitimate trade for wholesale dealers to sell to. The report also recommended that the National Wholesale Dealers' Association take up and consider the recognized evils from which both branches of trade are suffering, viz., sales by manufacturers and wholesalers to consumers; sales by brokers, agents and commission men to consumers; sales and quotations by so-called retail dealers to consumers, through agents, and by methods used by the wholesalers in soliciting trade from retailers. The retail dealers pledged themselves to buy their stock, as far as possible, from members of the National Lumber Dealers' Association, and the latter agreed not to sell direct to the consumer. The report submitted by the retail dealers was unanimously adopted.

Mr. Charles Hill, of North Tonawanda, introduced the subject of establishing regular terms of sale, the discussion on which indicated some difference of opinion between the pine and hardwood trade as to the date from which settlements should be dated. It was finally resolved that in the absence of other arrangements between buyer and seller, the terms of sale in the wholesale trade should be as follows: Freight, net cash when lumber is delivered; balance, either 1½ per cent. off for cash within fifteen days from date of invoice, or bankable paper, sixty days from date of invoice.

The Committee on Hardwood Inspection, of which Mr. M. M. Wall, of Buffalo, is chairman, submitted a report recommending the adoption of the inspection rules of the National Hardwood Lumber Association, and the appointment of a committee to confer with that association to secure such modifications as may be necessary to the end that a uniform national inspection be established. These recommendations were unanimously adopted.

The Nominating Committee, consisting of Messrs. E. C. Grant, R. B. Wheeler and Alfred Haines, submitted the names of the following gentlemen to serve as trustees during the ensuing three years: John N. Scatcherd, Buffalo, N.Y.; Robert C. Lippincott, Philadelphia, Pa.; C. M. Smith, North Tonawanda, N.Y.; W. C. McClure, Duluth, Minn.; L. H. Shepherd, Boston, Mass. These gentlemen were elected without opposition.

On Wednesday evening the visiting lumbermen were tendered a banquet at Young's Hotel by the New England Association of Lumbermen, at which there was a large attendance and much brilliant speech-making.

Following the adjournment, the trustees re-elected the board of officers, which is as follows: President, John N. Scatcherd, Buffalo; 1st vice-President, Robert C. Lippincott, Philadelphia; 2nd vice-President, C. H. Bond, Oswego; Treasurer, Frederick W. Cole, New York; Secretary, Eugene F. Perry, New York; General Counsel, John Jay McKelvey, New York.

### WHOLESALE DEALERS REPRESENTED.

The following wholesale firms, who are members of the association, were represented at the convention:

Atlantic Lumber Company, Boston, Mass.
Badger & Winslow, Boston, Mass.
Owen Bearse & Son, Boston, Mass.
C. M. Betts & Co., Philadelphia, Pa.
Boston Lumber Company, Boston, Mass.
Buffalo Hardwood Lumber Company, Buffalo, N.Y.
Buffalo Maple Flooring Company, Buffalo, N.Y.
Briggs & Cooper, Saginaw, Mich.
E. P. Burton & Co., Philadelphia, Pa.
W. R. Butler & Co., Boston, Mass.
E. P. Chapel, New York.
Chequasset Lumber Company, Boston, Mass.
Cleveland Saw Mill & Lumber Co., Cleveland, O.
F. W. Cole, New York.
Crosby & Beckley Company, New Haven, Conn.
R. B. Currier, Springfield, Mass.
Cypress Lumber Company, Boston, Mass.
John E. DuBois, Philadelphia, Pa.
Dwight Lumber Company, Detroit, Mich.
Eddy-Sheldon Company, Bay City, Mich.
C. K. Eddy & Sons, Saginaw, Mich.
Empire Lumber Company, Buffalo, N.Y.
Emporium Lumber Company, Buffalo, N.Y.
L. H. Gage Lumber Company, Providence, R.I.
Haines & Co., Buffalo, N.Y.
E. B. Hallowell & Co., Philadelphia, Pa.
Hall & Munson Company, Bay Mills, Mich.
W. S. Harvey, Philadelphia, Pa.
Jones & Witherbee, Boston, Mass.
B. F. Lamb & Co., Boston, Mass.
Lawrence & Wiggin, Boston, Mass.
Litchfield Bros., Boston, Mass.
R. C. Lippincott, Philadelphia, Pa.
H. M. Loud & Sons, Buffalo, N.Y.
Hugh McLean & Co., Buffalo, N.Y.
Millard Lumber Company, New York.
Montgomery Bros. & Co., Buffalo, N.Y.
Northwestern Lumber Company, Eau Claire, Wis.
Noyes & Sawyer, Buffalo, N.Y.
Ottawa Lumber Company, Ottawa, Ont.
Peart, Nields & McCormick Co., Philadelphia, Pa.
Pease Lumber Company, Springfield, Mass.
Rib River Lumber Company, Toledo, O.
Rice & Lockwood Lumber Company, Springfield, Mass.
Chas. S. Riley & Co., Philadelphia, Pa.
W. H. Sawyer Lumber Company, Tonawanda, N.Y.
Scatcherd & Son, Buffalo, N.Y.
Shepard, Farmer & Co., Boston, Mass.
Shepard & Morse Lumber Company, Boston, Mass.
C. R. Shuttleworth, Buffalo, N.Y.
Smith, Fassett & Co., Tonawanda, N.Y.
E. A. Smith & Co., Providence, R.I.
E. A. Souder & Co., Philadelphia, Pa.
Stetson, Cutler & Co., Boston, Mass.
Swan-Donogh Lumber Co., North Tonawanda, N.Y.
Taylor & Crate, Buffalo, N.Y.
H. M. Tyler Lumber Company, Tonawanda, N.Y.
Underhill & Poole, Buffalo, N.Y.
United Lumber Company, Springfield, Mass.
H. D. Wiggin, Boston, Mass.
White, Rider & Frost, Tonawanda, N.Y.
Wiley, Harker & Co., New York.
R. B. Wheeler & Co., Philadelphia, Pa.
Weston & Bigelow, Boston, Mass.
Euegene F. Perry, New York.
John Jay McKelvey, New York.
E. True Bennett, Hardwood Lumber Company, Memphis, Tenn.

## AN ATTRACTIVE CATALOGUE.

In the illustrated catalogue No. 45, issued by the Standard Dry Kiln Co., of Indianapolis, Indiana, and just to hand, we find much of interest regarding the principle of drying by moist heat, the method which it is claimed is scientifically applied only in the Standard dry kiln. In addition to several illustrations and photographic views, there appear numerous commendatory letters from customers who have given the Standard dry kiln and the steel roller bearing trucks a trial. These include some of the largest woodworking firms in the United States and Canada, including J. A. Sayward, of Victoria, and the Pacific Coast Lumber Co., of New Westminster, B. C.

## PERSONAL.

Mr. John A. Bertram, son of Mr. John Bertram, president of the Collins Inlet Lumber Company, has opened an office as lumber inspector and shipper in the Land Security Chambers, Toronto.

The lumber trade will sympathize with Mr. Wm. Thompson, president of the Longford Lumber Co., in the death of his wife, which took place on March 4th. Mrs. Thompson was but thirty-two years of age.

Mr. S. P. Benjamin, lumber manufacturer, of Wolfville, N. S., returned last month from a three months' business trip to Cuba and other West India islands. Mr. Benjamin looks for increased trade between Canada and these islands.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

**One Copy, Weekly and Monthly, One Year, in advance..... $1.00**
**One Copy, Weekly and Monthly, Six Months, in advance..... .50**

**Foreign Subscriptions, $2.00 a Year.**

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## FACTS WORTH CONSIDERING.

A FEW years ago mention was rarely made of the fact that lumber was imported into Canada from the United States; the quantity was then of little account. Simultaneously with the settlement of our western country, changed conditions have arisen, and to meet these a re-adjustment of our business relations with the United States is necessary. A duty having been placed upon Canadian lumber imported into the United States, it is proposed to place a similar duty upon lumber and other timber products imported into the Dominion from that country. This fact lends additional interest to the statistics just to hand of the timber exports from the United States for the last fiscal year. It can safely be assumed that the lumber trade of Canada, as well as the general public, underestimate the quantity of wood products of American manufacture that find a market within our borders. The figures given below of the imports for the last fiscal year, as compiled from the Treasury Department statistics, will assist a better understanding:

TIMBER AND UNMANUFACTURED WOOD, SAWED.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick... | 2,443,000 | $ 28,624 |
| Quebec, Ontario, etc..... | 10,003,000 | 139,523 |
| Total..... | 12,446,000 | $168,147 |

TIMBER AND UNMANUFACTURED WOOD, HEWN.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick.. | 17,285 | $ 2,530 |
| Quebec, Ontario, etc..... | 2,406,344 | 737,149 |
| Total..... | 2,423,629 | $739,679 |

BOARDS, DEALS AND PLANKS.

| | Feet. | Value. |
|---|---|---|
| Nova Scotia and New Brunswick . | 2,245,000 | $ 40,880 |
| Quebec, Ontario, etc..... | 67,900,000 | 963,263 |
| British Columbia..... | 2,252,000 | 16,714 |
| Total..... | 72,397,000 | $1,020,857 |

JOISTS AND SCANTLING.

| | Feet. | Value |
|---|---|---|
| Nova Scotia and New Brunswick .... | 290,000 | $ 3,115 |
| Quebec, Ontario, etc..... | 7,030,000 | 70,761 |
| Total..... | 7,320,000 | $73,876 |

SHINGLES.

| | | |
|---|---|---|
| Ontario and Quebec ..... | 7,312,000 | $10,250 |
| British Columbia..... | 5,590,000 | 7,365 |
| Total..... | 12,902,000 | $17,615 |

It will be observed that the exports of lumber to Manitoba and the Territories, which last year represented thirty-eight million feet, are not mentioned in the above statistics, although it is possible that they may have been taken into account in conjunction with the products of some of the other provinces. Granting this, we find the total exports to Canada of timber and lumber as shown to be, approximately, ninety-five million feet, having a value of over two million dollars. But it is improbable that these statistics are complete, as government figures of this character do not usually represent accurately that for which they are intended, frequently falling short of the actual total.

That timber products to the value of over two million dollars were freely admitted into Canada in one year, while a duty was exacted on every board going into the United States from Canada, is a fact which cannot become too widely known in this country. We are too apt to regard our importations as an insignificant quantity, and thus in our ignorance to allow the United States to exploit our home market, while at the same time excluding us from theirs. It is of interest to compare the lumber imports of the two countries. As stated above, Canada imported from the United States last year timber and lumber to the value of two million dollars, while in 1896, the last year of free lumber, the United States imported from Canada lumber to the value of between eight and nine million dollars. Since the imposition of the duty, the quantity imported by the United States has been reduced, and were the complete returns for 1898 available, we believe they would show a substantial decrease in comparison with the year 1896. The relation which our lumber imports from the United States bear to our exports to that country is a question which might well receive greater attention, and which has been overlooked very largely in the past.

Reverting to the Treasury Department statistics, we observe that Great Britain was the best customer for boards, planks and deals, taking 123,425,000 feet, but that Canada ranks second, taking over half that amount, or 70,145,000 feet. For timber and unmanufactured wood, hewn, Canada stands first among the customers of the United States, Great Britain coming second. Canada ranks sixth as a purchaser of timber and unmanufactured wood, sawed, second as a purchaser of joists and scantling, and third as a purchaser of shingles. These classifications show the importance of the Canadian market to the United States lumbermen so far as their export trade is concerned.

The Dominion parliament, now in session, is not likely to adjourn without passing important legislation looking to the protection of the lumbering industry, and, consequently, to the country at large. This will be done by placing an import duty on United States lumber and an export duty on pulp wood.

## NEED OF UNIFORM INSPECTION RULES.

THE movement in the United States towards securing uniform rules for the inspection of lumber has been advanced another step by the adoption by the National Wholesale Dealers' Association of the rules compiled by the National Hardwood Dealers' Association. That an association such as the above, composed of the leading wholesale dealers of the Eastern States, should have accepted these rules, must influence smaller organizations in the same direction, and be regarded as a strong factor in the ultimate success of what is intended to be accomplished, namely, their universal adoption.

It must be admitted that the position of the lumber trade in the United States, so far as uniform rules are concerned, is vastly superior to that of the trade in Canada, and particularly in Ontario, where standard rules are almost unknown. In Quebec and New Brunswick the inspection of spruce lumber is fixed by statute, but the rules are so general in character and indefinite as to be of little value, and are used only for export trade. To a large extent every mill man makes his own inspection, and sells his production either upon its reputation or after having it inspected by the buyer. In Ontario there are no inspection rules in existence, those adopted by the Toronto Board of Trade having long since become obsolete.

Elsewhere in this number are given the views of some members of the lumber trade in Ontario regarding the adoption of uniform rules. The advantages of such seem to be quite generally admitted, although in one or two instances one can almost read between the lines that the consequent readjustment of trade is not regarded favorably, while others doubt the feasability of adopting standard rules. There is more enthusiasm evinced by the hardwood dealers and manufacturers than by the pine men, perhaps due to the fact that they have suffered greater loss and annoyance in the past through the absence of proper rules of inspection. The buyer of lumber, in order to feel reasonably safe in making a quotation, must first inspect the stock, as one mill man may, in his judgment, class as firsts or seconds that which another mauufacturer would regard as common. With uniform rules this would not be necessary in all instances, and the sale and purchase of lumber would be greatly facilitated and the cost to the buyer reduced, thus enabling him to pay a higher price to the manufacturer.

The Ontario Lumbermen's Association recognize the necessity of a more systematic grading of lumber, and have appointed a committee to prepare a set of rules. These will no doubt apply more particularly to the production of the Georgian Bay district, and may not be sufficiently comprehensive to be accepted as provincial rules. In any case, we welcome them as indicative of a progressive movement, and in the hope that they may ultimately lead to the adoption of standard inspection for the province by statutory law or by the universal approval of the trade.

## INTERIOR FINISH.

It is not necessary to go out of Canada to procure handsome woods for interior finishings. For dark woods we have walnut, cherry and black birch, and for medium woods we have several of the oaks—white, red and black—which, when quarter sawn, equal, when properly finished, any oaks in the world for fineness and variety of grain and color. Then we have the despised butternut, three or four kinds of ash, the elms, whitewood, basswood and white pine. Cherry, grown on low loamy land, is the peer of mahogany, and is passed off for that wood as often as it passes for cherry. It has a fine silky grain, and, if properly sawn, is veined as richly as mahogany, and will take a finish equally as well. Unlike mahogany, however, it is apt to warp and twist out of shape if not held in position It is an excellent wood as a veneer on good pine cores. It may be easily darkened by staining the filler with some spirit stain before applying.

Black birch is almost as fine a wood as cherry, and takes a finish nearly as well. As a rule it is easier worked than cherry, does not cost as much, will last as long, and makes a very handsome finish. Birch may be stained almost as dark as rosewood by using a spirit stain before filling and then staining the filling. It can be polished until it is as glossy as a polished mirror. White oak, quarter-sawn and well-seasoned, makes on the whole the most durable and the most effective finish for rooms that are often used, or for halls or public rooms; and it has the quality of improving with age, something which cannot truthfully be said of many other woods. It is always better left in its natural color, which at first may be a little harsh, but it soon tones down to a soft, pleasing tone that is soothing to the artistic eye. Any of our oaks may be employed for trimmings, panel work, stairs, turned work, veneers, flooring or fitments of any kind. They are strong, durable and safe and not very difficult to work. Ash makes excellent chamber finish; it is bright, cheery, fantastic in grain, strong, and is not apt to get distorted or out of shape. It also makes excellent fittings for kitchens, pantries and similar work. Black ash has a grain similar to chestnut and takes stain readily. Furniture made of this wood and stained to imitate antique oak is often passed off as the latter to unsuspecting purchasers. It is a good wood to stand wear, and is especially suited to farm dwellings.

Another Canadian wood that is seldom used in interior finishing is our beech. This wood, when properly filled and polished, has a very pleasing appearance, as it possesses a satiny glow and warmth that is quite charming. As a material for floors, beech ranks in the same class as maple. It is nearly as hard, is some darker and wears just as well. In the lighter woods nothing excels our white maple. This equals the much-extolled satin-wood, both as regards the fine grain and susceptibility of finish; and our bird's-eye or mottled maple equals any light wood in the world in beauty, and it can be polished as smoothly as ebony. Butternut, basswood, elm and white cedar make good material for ordinary work. Butternut, when properly fitted and finished, makes a good showing and serves well in library or parlor, though not as well suited for such work as oak. White pine is the king of soft woods; it is at home anywhere, and, if finished in its natural state, shellacked or varnished properly, shows up a soft golden glow that is unsurpassed by any other wood. Some of the woods of British Columbia are well adapted for interior finishings, while the coarser kinds make excellent framing timber, scantlings, joists, rafters, etc., etc. There is plenty of timber to satisfy all Canadian requirements within our own boundaries, and it is foolish and wasteful to import foreign woods for interior finishings.

## EDITORIAL NOTES.

The Michigan lumber manufacturers pretend to believe that the manufacturing clause relating to timber will not be allowed to take effect, but that it will be vetoed by the Dominion government. In the face of this pretense, we read that a Mr. Graves, who has for years operated a shingle mill in Michigan, is preparing to build a mill on the Spanish river, Algoma district. This is a forecast of what may be expected when our Michigan friends realize to their own satisfaction that the law is on the statute books of Ontario to stay.

It has not been learned that any steps have as yet been taken by Canadian lumbermen to make a forestry display at the forthcoming Paris Exposition, although goods intended for that purpose must reach Montreal by November 1st of this year. It is improbable, however, that the opportunity thus afforded will be disregarded. Whatever is done by the government should be supplemented by exhibits by individual lumbermen, or by the united efforts of the trade, so that the immense timber resources of the Dominion shall be fairly represented. The distribution, at the Exhibition, of literature descriptive of ou forest wealth might also prove of advantage to this country.

There is, beyond a doubt, a great future for the pulp industry of Canada. If we are to judge by the number of pulp mill projects now being exploited, a wonderful growth of the industry will be witnessed within the next few years. In New Brunswick, two mills are under construction at St. John, and at St. Stephen, Bathurst and Fredericton new mills are projected. In Nova Scotia an American syndicate is about to build large mills, the town of Parrsboro is moving in the direction of securing a mill, and on the Sissiboo river another mill is likely to be built. At Ottawa, Petawawa, Port Arthur and Rat Portage, in Ontario, capitalists have in view the erection of pulp mills, and even in Manitoba there is a good prospect of a mill being established, Mr. J. A. Christie, of Brandon, being the promoter. These do not include all the proposed pulp manufacturing plants in Canada. It is improbable that all the projects being exploited will be carried to completion—that could scarcely be expected—but the interest shown in the industry will surely result in a healthy development.

The question of insurance is now engaging the attention of several lumber associations in the United States. The trustees of the National Wholesale Dealers' Association have obtained statistics showing that whereas $2,500,000 had been paid in premiums by the members, but $1,000,000 had been recovered as compensation for losses sustained. It has been decided to make an effort to secure an arrangement whereby the members of the association by combining can obtain a reduction of 50 per cent. in their rates. The Northwestern Lumberman's Association is reported to have met with good success in the working of a mutual lumber insurance association. In the five years of its existence the rates have been greatly lowered, and last year the cost to policy holders was but 36 per cent. of the rate at which their policies were written. That this question has been taken up by the Western Retail Lumbermen's Association of Manitoba speaks well for the foresight of the members of that organization. It was feared, however, that the membership was not sufficiently large to permit of the successful carrying out of the scheme.

The results being accomplished by the National Wholesale Lumber Dealers' Association of the United States, a report of whose convention appears elsewhere, emphasize in a practical way what we have previously said as to the benefits of lumber associations. This organization is proving of great advantage to its members. The feature of the last meeting was the agreement entered into by which the retail dealers are to have their legitimate trade protected from the onslaught of certain wholesale dealers, while the retailers in turn agree to buy, as largely as possible, from members of the Wholesale Dealers' Association. In connection with the association, there is a Bureau of Information, from which a reliable report can be obtained on almost any lumber dealer in the United States or Canada. These reports are compiled from many different reports sent in by members of the association who have had personal dealings with the person enquired about, and are usually very complete. A system of insurance has also been inaugurated by the association, by which a member can secure a lower rate than he can through any legitimate company, and, in addition, share in the profits which may accrue from the saving in the premiums. These, and other advantages, such as the railway freight claim, legal, arbitration, and lumber inspection departments, serve to show the usefulness of the association to its members. It is possible that, through the efforts of Mr. E. C. Grant, the next convention will be held in Ottawa, when it is hoped to increase the membership of Canadian lumbermen in the association.

## QUESTIONS AND ANSWERS.

"R.K." writes: Would you inform me as to the number of railroad ties and value of same imported into Canada from the United States during the years 1897 and 1898?

Answer.—The statistics kept by the Department of Trade and Commerce of the import of railroad ties has included fence posts also, so that the item reads "Fence Posts and Railroad Ties." These were imported in the year 1897 to the value of $91,009, and in 1898 to the value of $68,236. The quantities are not given.

In Maine there are seventeen spool factories, and the white birch forests of that state annually supply the material for 300,000,000 spools on which there is subsequently wound about 50,000,000,000 yards of thread.

## THE LAKE ST. JOHN REGION WITH REFERENCE TO THE PULP AND PAPER INDUSTRY.*

By J. C. Langelier, Superintendent of Forest Rangers.

The hydrographic basin of which Lake St. John constitutes the centre embraces within its extreme limits nearly 175 miles from south to north, and about 225 from east to west. The area comprised within these limits or the superficies of the territory drained by the rivers whose waters flow into the great lake, is about 30,000 miles, or 19,200,000 acres. The area of Maine is equal to that of all the other New England States. Nevertheless, it does not exceed by 2,000,000 acres that of the territory of Lake St. John, which exceeds by 1,808,640 acres that of New Brunswick, by 5,819,520 that of Nova Scotia, is double that of Denmark and of Holland, and nearly three times that of Belgium. Lake St. John forms the hydrographic centre of this vast region. Its elevation is about three hundred feet above the level of the sea. In its greatest length between the mouth of Belle Riviere and the estuary of the Mistassini, it measures 27¾ miles and 20 in its greatest width from the estuary of the Peribonca to that of the River Ouiatchouan. The perimeter of this lake forms a line 85 miles long and its superficies is 365.4 miles or 263,856 acres.

The principal rivers that fall into Lake St. John are: On the South-east the Belle Riviere, about a hundred feet wide, 45 miles long, and whose chief tributary brings the waters of Lake Kinogamichiche and forms a water-fall sixty feet high at a short distance from the village of Hebertville; on the south the Metabetchouan or riviere du Poste, about 50 yards wide and 80 miles long; on the south-west the Ouiatchouan, about 60 yards wide and 68 miles long; on the west the Chamouchouan, which divides into branches 92 miles from Lake St. John, continuing under the same name to the south-west to 170 miles from its mouth, while the branch called la riviere du Chef, which is larger than the other, runs towards the north-west; on the north-west the Mistassini, whose main course is over 200 miles long without counting its three great tributaries, the Assiemska, the river aux Rats, and the Mistassibi; on the north the Little Peribonca, about sixty yards wide and 80 miles long; on the north-east the great Peribonca, which is over 350 miles in length, and the largest of all the rivers that flow into Lake St. John.

### WATER POWERS.

It would be difficult to imagine a region wherein the superficial conformation and the surface elevations of the soil are better adapted for producing water power than that of Lake St. John. Starting from the shores of the lake on the north and north-west, the land rises by steps from one plateau to another. These steps are marked at several places by ridges forming so many obstacles to the course of the rivers which overcome these obstacles and, descending from one plateau to another, they form cataracts frequently of considerable height.

A line drawn around Lake St. John, a dozen miles to the north of the lake, thirty to the north-west, fifty to the west, two to the north and ten to the east, would circumscribe the water-powers set forth in the following table:

| Rivers. | Motive Power. |
|---|---|
| Great Peribonca | 301,025 horse power. |
| Little Peribonca | 1,500 " " |
| Mistassibi | 75,000 " " |
| Mistassini | 60,000 " " |
| Au Rat | 22,723 " " |
| Assiemska | 15,000 " " |
| Chamouchouan | 100,000 " " |
| Au Sammon, aux Iroquois and Auiatchouaniche | 2,000 " " |
| Ouiatchouan | 33,000 " " |
| Metabetchouan | 2,500 " " |
| Belle Riviere and Aulnaies | 500 " " |
| Little Discharge | 25,000 " " |
| Grand Discharge | 15,000 " " |
| Total | 653,248 " " |

### FORESTS AND TIMBER.

We have seen above that the territory of Lake St. John covers an area of 19,200,000 acres. Of this less than 500,000 acres is under cultivation or cleared, and the remainder is covered by forests. The principal kinds of timber are spruce, balsam fir, white birch, cypress and pine. White, black and red spruce constitute more than 75 per cent. of the timber. Fire has ravaged this territory in many places. The disastrous effects of the great fire of 1875 in the Mistassini region are no longer visible; the second growth is as fine as the first, as regards the size of the trees, while the wood is sounder and less knotty. In the Peribonca region the timber is rather small for saw logs, but is of the best kind for pulp.

The quantity of pulp wood in the Lake St. John region is practically unlimited. Taking only 5 cords to the acre as the average, we obtain fabulous results, which clearly show that this immense territory can provide an almost inexhaustible supply of raw material.

The basin of the Great Peribonca covers an area of 8,320,000 acres. There is certainly no exaggeration in estimating at five cords per acre the quantity of black and white spruce suitable for pulp making in this region, which would make 41,600,000 cords.

The basin of the Mistassini covers about 4,800,000 acres of wood-land, which, at five cords per acre, would give 24,000,000 cords of pulpwood.

The region drained by the Chamouchouan contains at least 3,200,000 acres of forest, which would also give 16,000,000 cords of pulp wood at the same rate of five cords per acre.

In the remainder of the Lake St. John territory, that is the southern part drained by the Ouiatchouan, Metabetchouan and other rivers, there are also 3,200,000 acres of forests of coniferous trees, which could also give 16,000,000 cords of pulpwood and even more.

All these data may be resumed as follows:

| Region | Area. | Quantity of Pulpwood. |
|---|---|---|
| Peribonca | 8,320,000 acres | 41,600,000 cords. |
| Mistassini | 4,800,000 " | 24,000,000 " |
| Chamouchouan | 3,200,000 " | 16,000,000 " |
| Ouiatchouan | 3,200,000 " | 16,000,000 " |
| Total | 19,520,000 acres | 97,600,000 cords. |

These ffgures represent only the product of the first cut. It is well known, however, that if carefully attended to, spruce forests grow up again in twenty years.

### PULP INDUSTRY.

Wood and motive power are the principal elements needed for making pulp. Now, in examining the foregoing data, we must conclude that there is no country or region better adapted to this industry than the immense territory of Lake St. John, especially the northern and north-western portions. Estimating the quantity of wood required to make a ton of pulp at 1½ cord, the maximum figure, the 97,600,000 cords of wood in this territory would permit of the manufacture of 65,666,666 tons of pulp, or 1,000,000 tons per annum for 65 years. The Canada Lumberman on the faith of reliable statistics said in December last that the paper mills of the United States consume 1,000,000 cords of wood annually. The Lake St. John territory could supply this quantity for 65 years merely with the first cut of its forests of coniferous trees; this will give an idea of the importance of this territory with reference to the pulp and paper-making industry.

In Europe, Sweden, Norway and Germany are the foremost in the making of wood pulp. They supply the greatest quantities of this material to England and to France, besides what is sent to other large centres such as those of Belgium, Spain and Italy. According to the statistics published in the Forestry Magazine in October, 1884, the total area of the forests of each of those northern countries at that date was as follows:

| | | | |
|---|---|---|---|
| Sweden | 40,636,883 acres, | or 40.43% | of whole territory. |
| Norway | 17,279,000 " | 22.30% | " " |
| Prussia | 20,097,014 " | 23.35% | " " |

During the fourteen years that have elapsed since then, the wood pulp and other similar industries must have disposed of a considerable portion of those forests. This does not prevent the Scandinavian countries from continuing to export yearly about 500,000 tons of pulp in the shape of raw material or of paper, after supplying all the needs of domestic consumption.

The coniferous forests of the region of Lake St. John exceed in extent those of Norway, are nearly equal to those of Prussia and to halt those of Sweden. It is acknowledged that our timber —black and white spruce—is of superior quality to that of Scandinavia and Prussia.

All the above gives an idea of the possibilities of the pulp and paper industry in the Lake St. John region. If the requisite capital be devoted to it there is enough wood there and enough motive power to supply wood pulp to half Europe.

### FACILITIES FOR ESTABLISHING FACTORIES.

The great water powers of the Peribonca and Mistassini are connected with the railway by means of the steamboats running regularly on Lake St. John. The transportation of building materials, and especially of heavy pieces of machinery, could therefore be easily effcted without heavy expense.

Most of the products of the factories, pulp and paper, would be exported chiefly to Europe. In summer the shipments could be made with advantage from the port of St. Alphonse at the head of Ha! Ha! Bay. This bay, which measures 8 miles in depth by 2 in width, is beyond a doubt one of the finest seaports in Canada. Protected against the south, west and north winds by the mountains that surround it on those sides, it is exposed only to the easterly winds, which seldom blow, and which are in great part kept off by the high capes at the entrance of the bay. The depth of the latter is considered everywhere, varying from 5 to 80 fathoms at low water, and its clay bottom affords good holding ground for anchors. At the St. Alphonse wharf the water is 29 feet deep at low tide in spring tide and 47 at high water. The entrance of the bay is only 53.59 miles from Tadoussac.

From the mills on the Great Peribonca and Mistassini, pulp and paper could be carried in steamboats to Roberval and thence shipped to Chicoutimi or Quebec. These means of transport already exist. But if the undertaking were in the hands of a powerful company with the requisite capital, it would be much more advantageous to connect the mills themselves and the port of St. Alphonse by means of an electric railway which would be about 30 miles long.

With the water powers and the wood in the Lake St. John territory, it would be possible to produce over 500,000 tons of paper a year, and this ad infinitum. The annual value of this product would exceed $20,000,000, which gives an idea of the resources and wealth we possess in that corner of the province, if its forests are wisely preserved and intelligently utilized. It is doubtful whether the Yukon, with its gold, can produce as much for as long a time.

* Abstract of a report submitted to the Department of Woods and Forests of the Province of Quebec.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.*

VOL. V. TORONTO, ONT., MARCH 29, 1899 No. 10.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED.—One first-class Band Saw Fitter and one first-class Band Saw Runner for new mill. Apply to J. H. DANSEREAU, Vercheres, Quebec.

PORTABLE STEAM SAW MILL (JOHN ABELL make) for sale; 25 h.p. Boiler and Engine, boiler in good condition, engine slightly broken; also House and Orchard in connection. Will be sold cheap. Apply to GEORGE A. FLEMING, Hockley, Ont.

FOR SALE.

LIGHTNING MATCHER REVOLVING BED Surfacer, Re-saw, Band Saw and other Wood Tools—all in good working order. Address, "MACHINERY," P.O. Box 43, Kingston, Ont.

TO MILL MEN.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

## PULP AGENCY WANTED

ENGLISH FIRM, WELL CONNECTED WITH the paper makers in Great Britain, wants Agency for

**Mechanical and Chemical Pulps.**

Established 30 years. Address, "PAPER," care Deacon's Advertising Offices, Leadenhall St., London, England.

## FOR SALE

### Saw and Shingle Mill, Sash and Door Factory

With Dry Kiln complete, Machinery, Buildings, Out-Buildings, Dwelling Houses, etc., etc., located in the Kootenay District, British Columbia, with three thousand acres best timber limits within five miles of mill. Timber can be drawn to mill for ten cents a thousand. Satisfactory reasons for selling. Apply for particulars to, and correspondence solicited,

ROBERT F. SEGSWORTH, Barrister,
103 Bay Street, Toronto.

IMPORTANT TO LUMBERMEN

## FOR SALE BY TENDER.

### Valuable Saw Mill and Timber Limits in British Columbia

56,542 ACRES, MORE OR LESS, VIRGIN forests of Oregon Pine, Cedar and Spruce Limits in British Columbia as follows:—

BLOCK 1.

Lot 51, 23,600 acres, more or less, Sayward District, Vancouver Island.

BLOCK 2.

Lot 439 G2., 9,280 acres, more or less, New Westminster District.

Lot 50 G., 6 720 acres, more or less, New Westminster, Chilliwack.

Lot 55, 15,900 acres, more or less, New Westminster, Chilliwack.

Lot 83, 1 042 acres, more or less, New Westminster, Chilliwack.

The above limits were selected years ago by competent cruisers at a time when every opportunity offered and was taken advantage of to secure the "pick" of timber lands, which have since become greatly enhanced in value.

BLOCK 3.

About 400 acres, more or less, of mill site and first-class farm lands, en bloc, situated on the north branch of the Fraser River about three miles east of New Westminster City. 200 acres, more or less, of this land is cleared, graded, drained and fenced in first-class manner, and been under cultivation a number of years.

The mill located upon this site is a frame mill, about 455 x 72 feet, with T across tail end of main building about 176 x 60 feet. The whole structure from foundation up is built in the most substantial manner—well timbered and braced with knees, metal roof, three (3) engines of 300 h.p each, and fitted throughout with special machinery for working up British Columbia timber of all dimensions, as well as for working up the refuse into lath, pickets, box shooks, etc.; also planers, matchers, etc.

One large refuse burner; one large stone boiler house, metal roof, containing ten large tubular boilers, pumps, etc. Good frame office, boarding house, cottages, horse stables, machine shops and blacksmith shop.

Ample booming ground, constructed in the most substantial and convenient manner.

The New Westminster branch of the C. P. Railway crosses this mill site, also has a switch graded to the mill and through the yard, giving this property first-class railway outlet, in addition to best facilities and ample water for loading large ocean-going vessels, giving the property unrestricted access to the markets of the world.

Sealed tenders for the above property, either en bloc or each parcel or block separately, will be received by the Secretary of the undersigned at their office, 110 Wellington Street, Ottawa, Ont., up to MAY 20TH, 1899, at twelve o'clock noon.

All tenders to be marked "Tenders for Maclaren-Ross B C. Property."

Tenders to be opened by the President and Secretary at the above address.

Terms, 10% cash, 20% in thirty days, and balance in six, nine and twelve months, by secured notes at 5% per annum. The property to remain vested in the Company until notes are fully paid.

The highest or any tender not necessarily accepted.

All letters requesting further information to be addressed to—

"THE SECRETARY,
"Maclaren Ross Lumber Co., Limited,
"110 Wellington St., Ottawa, Ont."

Ottawa, Ont, 15th February, 1899.

## CURRENT TRADE CONDITIONS.

### ONTARIO.

The recent snowfalls have lengthened the logging season, and all timber cut will likely be gotten out of the woods. It is not yet known just how the past winter's production of pine logs will compare with that of last year, although the opinion has been expressed that in the Georgian Bay district it will be slightly heavier, and that in the Ottawa valley there will be a reduced output.

The backwardness of spring has affected the volume of lumber moving, although favorable reports continue to be received of the present and prospective demand. Several manufacturers in the Ottawa valley have disposed of their 1899 production, and the fact that probable buyers have of late been numerous leads to the opinion that other transactions will soon follow. Low grade and common stock seems to be in most demand, some of the mills having closed contracts for 75 per cent. of their cut at an advance of from 15 to 20 per cent. on last year's quotations. While the cheif interest pertains to the lower grades, there is also a fair demand for good lumber. Dry stock does not cut any figure in the market, the quantity in first hands being very small.

Manufacturers of hardwood lumber are adhering to their decision to sell their lumber as mill run. This is limiting the volume of business, as there is frequently a disparity between the value of log run stock as fixed by the dealer and that in the mind of the manufacturer. As an offset to the increased price of raw material the furniture and chair manufacturers have advanced prices of finished goods.

### QUEBEC AND NEW BRUNSWICK.

Local trade in Quebec and New Brunswick has been rather backward, but an increased number of enquiries for lumber and shingles have been received from the Eastern States, and these are likely to be followed by orders. Buying for the British market is showing more life, and as the season advances and the actual extent of stocks becomes better known, a change of attitude will no doubt be shown. Some purchases of deals have been made at $9.50 per thousand f.o.b. Grindstone Island and St. John, N. B. This is an advance upon last year's quotations, but still too low to leave a fair margin of profit to the manufacturer. The general opinion is that prices will advance, especially if caution is exercised by both manufacturers and shippers.

### MANITOBA AND BRITISH COLUMBIA.

Dealers in Manitoba and the Territories look forward to a good season's trade, as tenders are being taken in Winnipeg and the larger towns on many new buildings. While the demand for lumber for immediate delivery is not large, the enquiries received indicate that dealers realize the necessity of increasing their stocks at an early date. Country trade has continued later than usual, but this will soon be terminated by the approach of the seeding season. It is learned that three United States houses this year have representatives in Winnipeg, these being the Pine Tree Lumber Co., the Crookston & St. Hillaire Lumber Co., and the Brainerd Lumber Co. In British Columbia the lumber trade is experiencing an active local demand on account of increased building operations, and prices are a trifle firmer.

### UNITED STATES.

The recent cold weather and accompanying snow falls greatly improved logging conditions in the Northern States, and it is probable that the input of both pine and hardwood logs will be nearly as heavy as was anticipated early in the season. In view of this, the movement of lumber from first hands has shown a falling off of late, as dealers believe that procucers' prices are too high, and are deferring purchases until after the opening of the sawing season. From present indications, it does not appear that prices are likely to weaken, as magnitude of demand and scarcity of supply are strong features of the market. All-round advances continue to be made on pine and hemlock at mill points, and it is learned that two-inch hemlock is held at $7.25 and $8.25 f.o.b. Manistee, Mich. Box lumber is practically out of the market, and other grades are being purchased to meet the requirements of the manufacturers. Lath is very firm, white pine having advanced to $2 in the Chicago market.

### FOREIGN.

The transactions in Canadian wood goods in the British market have been more numerous of late. Building is active, and consumers are purchasing more liberally to meet their season's requirements. At London a considerable quantity of pine and spruce lumber has been disposed of at auction sales, which has had a tendency to depreciate values. Generally, however, prices are firmer. Third quality spruce is held at £7 10s, and in all probability another advance will be made before the arrival of spring shipments. The holders of spruce at Liverpool are asking higher prices, especially for favorite dimensions. A fair amount of business is being done on contracting for goods to arrive, and brokers are adopting a stronger attitude.

The receipts on the Barbadoes market have shown a falling off, and consequently prices have a tendency to strengthen. Elsewhere will be found current quotations.

### NEW BRUNSWICK CEDAR SHINGLES.

In the New England states the weather of the past week has been exceptionally disagreeable, and building operations are at a standstill as a result. In spite of the lack of demand, cedar shingle values are said to be firmly maintained as a rule, and quotations are as follows, delivered on Boston freight rates: Extras, $2.85 to $2.90; clears, $2.45 to $2.50; saps and 2nd clears, $1.90 to $2.00. The season for building operations to commence with a rush is now near at hand, and it would seem that within a short time the usual spring demand for shingles will begin. It can safely be stated that when it does begin, prices on all grades will rapidly climb to such figures as are satisfactory to the manufacturers, and at which they are perfectly willing to dispose of their product, for the retailers are only lightly stocked and must have the goods. It is not believed that there is any variety of shingles made that can supplant the New Brunswick cedar in the New England market in any degree whatever until the latter has passed the basis of $3.25 for extras.

There is, then, a strong hope that the manufacturers will realize their full opportunity and avail themselves of it. For the last few years in shingles, as well as in all kinds of lumber, the buyer has uniformly been able to dictate the price. To-day the reverse is true, and the manufacturers have almost full control. The indications are that they realize the strength of their position, and intend to have for one year at least a fair margin on their product. In this, shingles only sympathize with all other varieties of lumber in the United States markets, and retail dealers now so thoroughly understand that all lines are advancing steadily that they much more willingly accept advances and place orders immediately for their needs, when in want, for fear of continued advances. The shingle manufacturers, therefore, to avail themselves fully of their opportunity, should read the trade papers thoroughly, and keep posted from week to week as to the exact state of the market.

When giving quotations, manufacturers should make them for immediate acceptance only, and should not allow commission wholesale houses to foist orders upon them at less than the figures they have quoted. When receiving orders more rapidly than they are producing the goods, they should advance prices and hold firmly to the advance. This year it is a manufacturers' market, and any reasonable advances all along the line are likely to be maintained.

One unfortunate feature of this particular line of business in years gone by, has been the fact that the average manufacturer of shingles has depended very largely for his knowledge of market prices upon wholesale commission houses, who were supposed to represent the manufacturer, truthfully tell him the position of the market, and give him current quotations, as well as sell his shingles. For these services such wholesale houses were supposed to derive as their remuneration a commission of 5 per cent. As a matter of fact these commission houses, being in the business from pecuniary motives, frequently report a lower price than actual current figures, with the object of thereby being themselves in a position to quote a little under their commission competitors, and secure more than their share of orders. In cases where they could easily secure full values and more than they had quoted as current figures, it was, and still is, an easy matter for the commission house to pocket the difference (between price obtained and price allowed the manufacturer as market value) to add to their commission. The only feasible way, therefore, for a manufacturer to protect his own interest (and nobody will protect it for him, certainly not his wholesale commission representatives), is to know for himself what his goods are worth, and then see that his wholesale friends pay for shingles accordingly, and that they are not left to sell goods for any price that suits themselves and is anywhere near market value, obliging the manufacturer to pocket the loss between what he actually received and what he should have received, and also at the same time breaking the market, and establishing a precedent for himself as well as others to follow in the future.

Another abuse of confidence on the part of the wholesale commission house toward the manufacturer, has been the sending of orders that call for a greater or less arbitrary freight rate over Boston rates, to a manufacturer at Boston prices, or only a very slight advance on Boston prices and not enough to cover the extra freight. All manufacturers should say to their representatives: "You are more familiar with arbitrary freight points and extra freight thereto than we can possibly be; we therefore quote you prices on Boston freight rates only, and any arbitrary points will be covered by our invoicing to you at our quotations at Boston points, and we will allow you to deduct only Boston rates." In this way the commission houses will be obliged to look out for themselves, and they are perfectly capable of doing it.

The outlook for the manufacturers this year is very bright, and if they will only take the full control of their sales into their own hands, we are sure they will be amply repaid therefore.

### STOCKS AND PRICES.

At Saginaw, Mich., box lumber is selling at $11.50 to $12.50, mill culls at $8.50 to $9.50, and Norway bill stuff at $9.50 to $11.

J. & R. McLeod, of Black River, N.B., manufactured with a portable mill over one million feet of deals during the past winter.

A timber berth on the Restigouche river, in New Brunswick, was sold by the Crown Lands Department last week to F. B. Coleman, at $75 per mile.

It is probable that the saw mill of Wm. Peters at Parry Sound, Ont., will be operated the coming season, and that the mill in Bay City which was run last year will not resume operations.

It is estimated that about 10,000,000 feet of white birch spoolwood will be shipped from Bangor, Maine, this year to Great Britain. The greatest amount shipped in any previous year was 7,000,000 feet.

It is reported that the St. Anthony Lumber Co., of Whitney, Ont., have sold several million feet of lumber at an advance of $2 per thousand over the price obtained for the same grade of stock two months ago.

The mill of the Conger Lumber Co. at Parry Sound, Ont., will probably resume operations this season. It is said that the company are negotiating for a contract to cut 10,000,000 feet of lumber, and that they will also cut 3,000,000 feet of their own logs.

Very little lumber is in the hands of manufacturers at Manistee, Mich. As high as $12 has been paid for common inch, and lots of pine piece stuff have been sold at $11.25 to $11.50 for 18-foot and under. There are no lath to be had, and probably $1.75 would be paid for good white pine on dock.

American owners of Ontario limits are said to be making active preparations for cutting their logs in the province. According to report, Turner & Fisher, of Saginaw, Mich., have given a contract to Chew Bros., of Midland, Ont., to manufacture 15,000,000 feet of their cut of 24,000,000 feet, while James Playfair & Co., of same place, will manufacture the remainder.

Hardwood lumber is selling on the Chicago market at the following prices: Dry basswood, firsts and seconds, $22; common and better, $18; log run, $14; soft elm, common and better, $16; red birch, $40 to $50; white birch, firsts and seconds, $26 to $28 for inch and $28 to $35 for thick; common and better, $20; thick ash, $45. As to pine prices, it is thought that the opening price for piece stuff will be about $11. Low grade boards are very scarce, No. 3 being held at $10.50.

Messrs. Bennetts, Limited, held an auction sale of lumber at Manchester, Eng., on March 16th, the prices realized being about as follows: Spruce scantlings, £5 15s. per std.; spruce boards, 1 × 5 and 6, £6 10s.; birch planks, £6 12s. 6d. to £6 15s.; 2nd quality Petersburg red boards, £9 15s. to £10; 1st quality Petersburg red battens, 2½ × 7, £10; 1st quality log pine boards, ¾ in. to 2 in. thick, 1½d. per foot; 2nd quality log pine boards, various sizes, 1½d. to 2d. per foot; pitch pine boards, various sizes, 1⅛d. to 1¼d. per foot.

At an auction sale held by M'Dowall & Neilson, Greenock, Scotland, on March 9th, the business done was as follows: 40 logs 1st class waney boardwood, 860 feet per page, 2s. 2d. per cubic foot; 40 logs 1st class waney boardwood, 700 feet per page, 2s. ½d.; 20 logs 1st class waney boardwood, 1,320 feet, 2s. 5½d.; 20 logs 2nd class waney boardwood, 1,040 feet, 1s. 6½d.; 27 logs prime rock elm, 2s. to 2s. 3d.; 40 logs Mobile oak, 1s. 6½d.; 20 logs hickory, 1s. 3d.; 606 logs sawn pitch pine, 500 to 700 feet, 11d. to 11¼d.; 571 3rd pine narrow deals, 10½d.; 573 3rd pine ends, 11d.; 1,247 1st pine deals, 11 in., 2s. 4½d. to 2s. 5½d., and about 5,000 pine and spruce ends, etc., from 6¾d. to 8½d. per foot.

### THE BARBADOS MARKET.

From the market report of Messrs. S. P. Musson, Son & Co. the following particulars of the Barbados market are obtained: Receipts of lumber have not been heavy of late, which has had a tendency to strengthen prices. The schooner Florence A arrived from Calais, Maine, early in March, with 25 M ft. spruce boards and 22 M ft. 3x4 spruce scantling, the former being sold at $11.31 and the latter at $12.03; indications point to an improvement in spruce. The sale recorded is of 53 M ft. white pine boards at $19.34 shipping and $12.56 second quality. One or two medium sized car loads of first and second quality white pine would be saleable at about these prices. A quantity of cedar laying shingles have been sold at $2.85. The schooner Eureka recently arrived from Halifax, with 78,000 cedar shingles, which were sold at $3.16. The schooner Stella E from Lunenburg, N. S., carried 30 M shipping and 50 M second quality white pine, sold at $19.11 and $13.25 respectively.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

In our weekly issue of March 1st reference was made to the failure of Joseph Jacobs, a contractor of Montreal, and it was stated that the Montreal Lumber Company was a creditor to the extent of $1,500. This company have drawn our attention to the fact that by giving prominence to their name when many other creditors were also interested an injustice was done them, which was far from the intention of the publishers of this journal.

### LUMBER FREIGHT RATES.

#### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa, Rockland, Hawkesbury and intermediate points to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft. Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5; Quebec, 10; Arnprior to Montreal, 7; Quebec, 12 cts.; Pembroke to Montreal, 8c.; Quebec, 13c. per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs. Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15, cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts.; lightered 19 cts. per 100 lbs. Pembroke to New York, track delivered 18c., lightered 20c. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 15 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany, 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 21 cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft.; the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

#### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Har-

Wholesale Lumber Dealers - 55 Kilby Street, BOSTON, MASS.

bor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the distr t freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

The rates at present in effect on the Canadian Pacific Railway to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. The rates are based on a minimum of 30,000 lbs. per car."

Summer rates to New York, via Albany and barge line expired on November 28th, owing to closing of navigation on the Hudson river, and the usual all rail rates became effective, as follows: To New York, for track delivery, and all points on the Hudson river, or the New York Central and West Shore railways, from Ottawa, Hull, Aylmer, Deschenes Mills, 15c. per 100 lbs.; from Carleton Junction, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including litherage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

Summer rates to Montreal expired on November 15th, and the usual winter rates became effective as follows: From Ottawa, Hull, Aylmer and Deshcenes Mills, 5c.; Carleton Junction, 6c.; Arnprior and Braeside, 7c.; Renfrew, Eganville and Pembroke, 8c. The rate to Three Rivers is 4c. and to Quebec 5c. over the rate to Montreal. The minimum car load in all cases where rates are computed on a weight basis is 30,000 lbs.; when on a measurement basis 10,000 feet B. M.

The C.P.R. also make the following rates on seasoned pine lumber to West St. John, N B., for export: From Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, $3.75 per M feet; Carleton Junction, Braeside and Arnprior, $4.00 per M feet; Renfrew, Douglas, Eganville and Pembroke, $4.50 per M feet. On lumber for local consumption at St. John, N B., and common points the rate is 20 cents from Ottawa, Hull and Aylmer, and to Halifax 21 cents from same points. On seasoned pine lumber the rate from Ottawa to Oswego, N.Y., is $1.90 per M feet, and to Syracuse, N.Y., $2.20 per M feet; from Ottawa to Buffalo, 12 cents and to Detroit 14 cents per 100 lbs.; to Boston, Mass., and common points, 15 cents from Ottawa, Hull, Deschenes Mills and all points east thereof; 16 cents from Carleton Junction; 17 cents from Arnprior, Braeside and Renfrew, and 18 cents from Eganville and Pembroke, and proportionate rates from points further west on lumber for consumption in the United States. The export lumber rate is 13 cents from Ottawa and Hull, 14 cents from Deschenes Mills, Aylmer and Carleton Junction, and 15 cents from Arnprior and Braeside to Boston.

# THE RETAILER AND Wood-Worker

## PIPING AND HOODING EXHAUST FANS FOR MILL USE.

Almost every planing mill or wood-working factory of the present time uses the exhaust fan for the purpose of taking the shavings and dust from the machines and depositing same in a suitable shavings vault near the boiler room, where they are used wholly or in part for fuel. In many factories, writes "G. T. L." in the Wood Worker, this system does not give full satisfaction, and is a constant source of trouble and expense. While some mills get fairly good results, it is usually at great expense of power and consequent cost of fuel, as well as the continual patching up of pipes, hoods and minor troubles. In every case where the fan does not work properly you can trace the trouble either to the imperfect way in which the pipes from the machines to the fan are rigged, the wrong method of hooding around the cutter heads, or in the way that pipes from the machine enter the main pipe.

There is no good reason why an exhaust fan should not work satisfactorily as any machine in the shop. If the fan is of suitable size and properly piped to the machines it will not cause any more expense, over the usual wear and tear for the work it does, than other machines. A man would be considered a fool who tried to make a pony do the work of a horse, or to carry a ton of coal in a light buggy, or if he used a cart horse for a trotter and a coal cart for a road wagon, although he could do the latter with better results than the former. So it is with the fan. You can't expect a small fan to do good work beyond its capacity. A too large fan is equally as bad, as it uses power that could be better employed, for the average mill, especially where heavy planing is done, is usually short on power.

Having occasion during many years to visit the different wood-working factories of the country, I found the shavings (or, rather, how to get rid of the shavings) problem a hard one for the mill man to solve, and it became a sort of study to me. It was a benefit to me in my business and I was often able to point out where trouble could be remedied and power saved. I became interested in the subject and made it a point to inspect thoroughly every pipe system I came across. From what I have seen, and from experience, I will give my ideas as to fans, piping and the proper way to hood machine cutter heads.

In the first place, the size of fan to be used depends entirely on the number of machines used and the class of stock they have to work on. The figuring out of pipe area is all right from the blower man's idea of the fan you ought to have, but you want a fan to pull shavings, not air, and his figures are often on the too-big fan, because the sale is better for him. The result is unnecessary expense for piping and waste of power. If a 24-inch planer is used for heavy dressing on yellow pine, cypress, whitewood, etc., it takes a larger pipe from the cutter heads to carry the shavings to the fan than it would if the machine was working on hardwoods or kiln-dried stock. A 36-inch fan might work perfectly in a plant of several planers working on the latter stock, while a 50-inch fan might stall on the same lot of machines working on the former stock. So in selecting a fan, the work the machines have to do is first to be considered, and second, the number of machines in use.

I have noticed that a six-inch pipe for the top head on a 14-inch planer and matcher, four-inch pipe for the lower and adjustable side head, and three-inch pipe for the guide-head, give the best service where the machine is used for jobbing or custom work ; and one inch larger diameter of pipes for machines where the cuts are heavy or the machine is used for dressing wide stock at rapid feed. For a 24-inch machine eight-inch pipe for top head, six-inch for lower head and five-inch for side heads are best, and for molding machines six-inch pipe for the top head and four-inch for the others. For smaller machines a four-inch pipe works the best. The size of pipes given are large enough to remove all shavings as made (provided the hoods to cutter heads are right) and will not clog if the fan is working up strong to speed as called for.

Many mill men think a hood should set as close as possible to the cutter head and enclose it entirely. This is a mistake, and many a mill that is now short of power and getting poor results from the fan, could make a wonderful change by simply altering the hoods on the machines. A cutter head running at any speed is a fan in itself. The faster it runs the more blast it gives, and this force will throw shavings for many feet from the knives guided by the usual shaving bonnet as furnished with the machine. Now enclose the cutter head as closely as possible, and, dressing stock the full width of the knives, the head is practically encased and the shavings will be carried around with the head until clogged up and the head stalls. If the fan is strong enough to overcome the force of the cutter head, then you get rid of the shavings, but the fan has to do just that much unnecessary work and at double the power required.

The hood or funnel, as it is sometimes called, should be made so it will catch the shavings as they are thrown into it from the cutter head force. Fig. 1 will give the idea. The opening to the hood should be clear of the knives so the

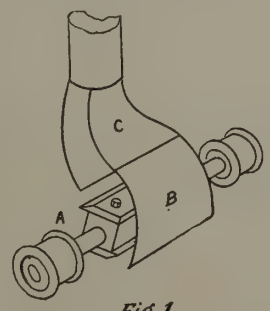

Fig 1

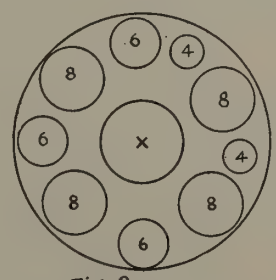

Fig. 2

shavings can be thrown into it, then the fan can do its work properly. Try this by taking a handful of shavings and throwing them into an open pipe, and see how quickly the fan will take them up. Shavings are taken up by the fan by the suction of air through the pipes, and you have to allow air to enter or you get no suction. So, if you hood your cutter heads tightly, where does the suction come in? From the machine to the fan the shavings are drawn by this suction or exhaust force, but leaving the fan are forced out by the same air as it is discharged, the same as a blast fan. Many fans do not work right because the discharge pipe is cramped at some point or has too many bends or turns in it. This prevents the free discharge of air and shavings, causing a back pressure that the fan is overworked to contend with, and of course at so much greater expense of power and the wearing out of belts, and piping at the bends or turns.

To select the suitable size fan, take the diameter of pipes in inches necessary to take care of each machine, add them up and divide by three. This will give you the diameter of inlet for fan. For instance, four machines taking eight-inch pipe make 32 inches, three with six-inch pipes make 18 inches, and two with four-inch pipes make eight inches, or a total of 58 inches. Divide this by three and you have 19⅓ inches, which is the diameter for the inlet to proper size fan for these machines. If you make it a trifle larger you will have plenty of spare fan to take care of two or three smaller machines if wanted. Fig. 2 will show this clearer.

If you have more machines to take care of than a single fan of 24-inch inlet will handle, a double fan is preferable to a single one of larger size. The best is to provide two single fans, or better yet, one fan for each floor or section of floor. If only one fan is used and it is disabled, the whole factory has to stop, while by using two or more fans only a part of the mill is hampered in case of trouble. The discharge pipe from the fans may enter a common discharge pipe at a point near the shavings vault, or the dust arrester, if one is used. The placing of a fan is very important, so the discharge will be as straight or direct as possible, avoiding short bends or perpendicular pipes. If turns are necessary, make them as wide as possible, and for elevations give as much incline as you can. Remember you can draw or pull around most any bend or corner, but to discharge or throw around a corner is not so easy. In the first case you coax around, and in the second you bang around, and extra force is required at every bend or turn.

After placing the fan, carry the inlet pipe full size to the first machine (not necessarily the one that does the heaviest work), and if you want the best system, one that will be the cheapest in the

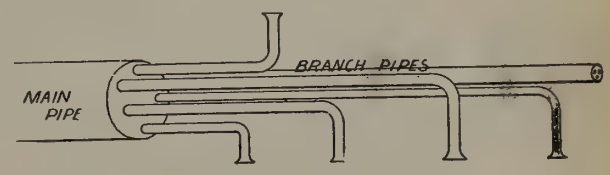

Fig. 3

long run, head the pipe up right there. From this heading run separate pipes (see Fig. 3) to each machine. For illustration, take a flute and blow through it and the first hole gives its note, and so on ; but open up again and the first hole responds. If you have wind enough to fill the flute to more than three or four of the holes can discharge, you can get the notes, but the first one will be the loudest, and so on down until the wind dies away. Now, if you take as many straws as there are holes in the flute, make them of different lengths and place the even ends in your mouth and blow, you will discharge as much air through the longest straw as the shortest, all getting their full capacity. Immerse the straws in water and draw or suck on the even ends and you will get just as much water through the longest straw as the shortest. Barring a little more friction the longest pipe from a machine entering in the heading of the main pipe (or, similarly used, the mouth) will suck or exhaust equally as well as the shorter one.

This method of piping is not very much more expensive than the flute system, and certainly gives better results : first, as to its working ; second, expense of keeping in repair and freedom from delays by clogging. If the flute system of piping is used don't make the mistake of running the main pipe tapering ; it's wrong—dead wrong.

If you are to pull shavings from the rush or current of air as it is exhausted, you certainly must lose force by gradually enlarging the suction pipe from a small diameter up to the full size of fan inlet. Take an ordinary funnel. Place the large end in your mouth and draw air through it. If you can fill the funnel end you get only the amount of air that you are able to draw through the small end, and to all intents and purposes a straight pipe of diameter of the small end would give same results. The same applies if you blow or discharge air. Keep your main line pipe to the fan, of regular diameter, and the discharge pipe full diameter of the outlet.

The branch pipes from the machines should enter the main pipe at the sides, at, or above, the center line, or at the top (never on the bottom), and with a turn pointing to direction of fan. The smaller pipes from side heads should enter the branch at nearest convenient point. The speed of the fan should be as catalogued by the maker, and if properly piped, will do its work easily and well to its full capacity. If the fan is too small for the work required, from adding new machines on from time to time, don't speed it up or run chances of a smash-up, or load the belt with a heavy tightener pulley and have trouble with the boxes or journals, or make the mistake of putting in a larger fan and expect it to work with the same piping as old one, but get an additional fan to do the extra work, required and thus remedy the trouble.

In equipping a new factory with the exhaust fan system, use the same care and judgment as you do with the rest of your plant. Lay out what you want or need and then get a good company to make the pipes and put them in; or your mill foreman will know from experience about what is the best way to get good results, so don't leave this work all to the pipe man. You will be paid for your trouble in the end if you study it up and plan yourself, or give the pipe man pointers. Where the pipe system is up and not working right, perhaps you may get some hint from this article that will enable you to locate the trouble and remedy it.

## TRADE NOTES.

The Chicago office of the Magnolia Metal Co. has been removed from the Traders' Building to the Fisher Building, 281 Dearborn street.

McKay Bros., East Hatley, are putting in one of the Jenckes Machine Co.'s steam plants, consisting of a slide valve engine and horizontal tubular boiler.

W. D. Pettigrew, of Winnipeg, who is developing mines at Wabigoon, Ont., has placed an order with the Jenckes Machine Co. for hoisting, crushing and pumping plants.

Thomas Lord, of L'Epiphanie Station, Que., is increasing his plant by the addition of a 35 h.p. engine, from the well known builders, the Jenckes Machine Co., Sherbrooke, Que.

The Lake Manitou Gold Mining Co., of St. Paul, have placed an order with the Jenckes Machine Co., Sherbrooke, Que., for a ten stamp mill to be erected on their property near Wabigoon, Ont.

The Defiance Machine Works, of Defiance, Ohio, are distributing to the trade a large hanger, on which is shown illustrations of some seventy special patent woodworking machines which they manufacture for making hubs, spokes, wheels, wagons, carriages, handles and hoops.

Geo. Long, of Sherbrooke, whose increasing business requires more motive power, is about to install a 25" Crocker turbine, in order that production may cope with the demand. This order was placed with the Jenckes Machine Co.

## "WANTED AND FOR SALE."

Persons having for sale or wishing to purchase a particular lot of lumber, a mill property, timber limits, second hand machinery, etc., in fact, anything pertaining to lumbering operations, will find a buyer or seller, as the case may be, by placing an advertisement in the "Wanted and For Sale Department" of the CANADA LUMBERMAN Weekly Edition. Testimonials to the value of this department by those who have given it a trial state that the results of advertisements were frequently better than anticipated. The cost is comparatively small. Mill owners might, with profit to themselves, make use of this method of advertising their stock to a still greater extent.

# THE NEWS.

—McIntosh Bros. have erected a new saw-mill near Cariboo, B. C.

—T. W. Gray, saw miller, Nelson, B. C., has sold out to Chas. Hillyer.

—W. Bladow is making preparations to rebuild his sawmill at Killaloe, Ont.

—The Cranbrook Lumber Co., of Cranbrook, B. C., purpose building a new saw mill.

—Chew Bros., of Midland, Ont., are erecting a box factory, 120x42 ft., at Dollartown.

—W. B. Fairbairn has disposed of his lumber business at Emerson, Man., to J. A. Badgley.

—H. V. Boote has purchased the lumber yard of Thos. Rutherford at La Riviere, Man.

—Magee & Thompson have purchased the lumber yard of R. W. Gibson at Sintaluta, Man.

—T. Burrows, M. P. P., of Winnipeg, will rebuild his saw mill at Pine River recently destroyed by fire.

—Rhodes, Curry & Co., of Amherst, N. S., have established a branch of their works at Halifax, N. S.

—G. B. Housser & Co., lumber dealers, Portage la Prairie, Man., are opening a branch at Macdonald.

—T. G. McMullen, M. P. P., has made extensive repairs and additions to his saw mill at Hartville, N. S.

—An exchange states that the Victoria Harbour Lumber Co. are considering the removal of their mill to Midland, Ont.

—The Southampton Manufacturing Co., of Southampton, Ont., are building an addition to their factory, and will put in a new dry kiln.

—The fourteenth annual meeting of the St. John River Log Driving Company will be held at Fredericton, N. B., on Wednesday, April 5th.

—The Bryan Manufacturing Co., of Collingwood, Ont., are just completing an addition to their planing mill, in which new machinery will be installed.

—R. C. Ervin, of Shubenacadie, N. S., has disposed of his electric light plant and intends engaging in the lumber business at Falmouth and near Windsor.

—James Playfair & Co. have removed their shingle mill from Sturgeon Bay to Midland, Ont. It is likely that Craighead Bros. will again operate the mill this season.

—The late John Larkin Cook, lumber merchant, of Toronto, who died in January last, left an estate valued at $396,000, consisting of stock in the Cook & Bros., Lumber Company.

—Estey & Thompson, of Fredericton, N. B., are said to have decided to rebuild their saw-mill at Shogamoc, although it is improbable that work will not be commenced before next summer.

—The Ontario Legislature has passed a bill empowering the town of Lindsay, Ont., to grant a bonus of $2,000, to Rider & Kitchener to establish a veneer and excelsior factory at that place.

—The C. Beck Manufacturing Co., of Penatenguishene, Ont., are putting in new box-making machinery. The company expect to keep both of their saw mills in operation throughout this season.

—Gilmour & Co., of Trenton Ont., are remodelling their large saw mill at that place, and purpose engaging extensively in the manufacture of boxes, for which purpose modern machinery will be installed.

—W. Craddock, of Huntsville, Ont., who a short time ago secured a contract for broom handles from a Liverpool firm, has completed his first car load. Mr. Craddock is purchasing large quantities of basswood logs.

—The Bronsons & Weston Lumber Co., of Ottawa, has made application to parliament to change its name to the Bronson Company, and for permission to carry on business as manufacturers of commercial products.

—Robert Watt, of Wiarton, Ont., has just rebuilt his sawmill, putting in additional power and new machinery. The improvements will double the capacity of the mill, which will commence operations upon the opening of navigation.

—The announcement is made that after May 1st the wholesale lumber business carried under the style of John S. Mason & Co. will be continued by Ichabod T. Williams & Sons, at 11th ave. and 25th street, New York city.

—The Canadian Pacific Lumber Co. have refittted and increased in capacity the sawmill at Port Moody, B. C. Arrangements have also been made to put in an improved dry kiln. The daily capacity of the mill will be between 50,000 and 75,000 feet per day.

—The Laurentide Pulp & Paper Co. are building a large sawmill at Grand Mere, Que., I. N. Kendall, of Ottawa, having the contract. The mill will cost $30,000, and the machinery will be supplied by the Wm. Hamilton Manufacturing Co., of Peterboro, Ont.

—It is said that T. Ludgate, of Peterboro, Ont., has secured from the Dominion Government a lease of Dead Man's island at Vancouver, B. C., and that he has agreed to build thereon a large saw-mill, expending $250,000, and employing several huhdred workmen.

—J. W. McCrae, of Tilsonburg, Ont., has purchased the foundry of John Makins at Lindsay, Ont. Extensive improvements will be made to the foundry and considerable machinery added. Mr. McCrae intends to manufacture circular sawing machines, shingle machines, mill fittings, engines, etc.

—Kitteridge, Smith & Co., of Shebrooke, Que., have invented a machine for making railway ties which it is expected will have a capacity of about 5,000 per day. The ties are planed on two sides and can be produced at less cost than by the ordinary method. The machine is being built by the Jenckes Machine Co.

—D. C. Cameron, manager of the Rat Portage Lumber Co., states that the building of the proposed saw mill in Winnipeg will not be commenced until next fall, but that operations will be carried on throughout the winter. The Rat Portage Co. are this spring expending about $20,000 in improving their manufacturing plant at Rat Portage.

—Oliver Haywood is erecting an extensive saw and planing mill at Whycocomagh, C. B. It will be operated by steam, and when completed will be the largeat mill in Cape Breton. The boilers and engines are from the works of I. Matheson & Co., New Glasgow, and the other machinery was supplied by the Robb Engineering Co., of Amherst, N. S.

—C. H. Witthun, of Hepworth Station, Ont., is removing his saw mill from Shallow Lake to Wiarton. The other saw mill at Hepworth, formerly owned by C. H. Witthun & Co., has been converted into a factory for manufacturing crokinole boards and other small woodenware. The merchantable timber in the vicinity of Hepworth is almost exhausted, and consequently the owners of mills are looking for new locations. J. E. Murphy will remove one of his mills this summer, and the other one about a year later.

—As indicating the fluctuation in the minds of those owning timber lands in Nova Scotia regarding their value, the following is given: N. N. Bentley, of Five Islands, purchased what is known as lot 6, of Garish Grant, from Mark Fulmore, for $1,000. This same block was part of a block of land that some years ago was sold for $125. Mr. Bentley bought it a few years ago for $140, lumbered it and sold it for $250. The other day he bought it back for $1600. Mr. Bentley also purchased the timber on the lot adjoining. About fifteen years ago the lot was sold to John W. Graham for $400. Mr. Bentley gave $3,000 for the timber of the property. He expects to cut thereon four million feet.

—Speaking of the export lumber trade, John Hendry, manager of the Hastings Sawmill Co., Vancouver B. C., said the prospects were never brighter. In his opinion all the concessions now being granted to European powers by China mean the construction of railways, and where railways are constructed there will be found Pacific Coast lumber. At first it was thought that the lumber for the Chinese railways would be sent from Russia, but the Russian lumber was found to be too brittle for railway construction, and instead of shipping lumber Russia is now importing it from British Columbia and Puget Sound for the Trans-Siberian line. Then the Austrailian trade is better than it was, and Mr. Hendry predicts that it will be still better when the federation of the Australian colonies has been completed, as it will be easier for Canada to make reciprocal arrangements with a united colony than with several small ones.

—Mr. Edmund M. Walker recently read an interesting paper on "Forest Trees of Canada" before the Canadian Institute, Toronto. In opening Mr. Walker gave a brief account of the extent of the burnt areas of forest land in Canada, the resulting evils being more than the mere loss of timber. As an instance of this, a comparison was made between the present climatic conditions and the lessened population of southern Europe and eastern Asia with those of twenty centuries ago. This great change is largely due to the clearing away of the forests, and it was shown that Ontario has already suffered to some extent in the same way. In the Maritime Provinces, however, the effect of the removal of the woods is quite different, the soil of the clearings being made wetter than it originally was by the coming in of the sea air. The dtstribution of the various forest belts in Canada was then given, with brief descriptions of the appearance, habits and geographical range of the various trees. Most of the forests of Canada are included in an immense belt called the sub-artic forest belt. The remainder were grouped into those of the Maritime Provinces, Quebec, Ontario, the Rocky and Selkirk mountains, and the Pacific coast. The paper was illustrated by lantern slides, showing twenty-five or thirty species of Canadian trees.

Mr. Erastus Wiman, on behalf of some friends in Canada, has presented to Governor Roosevelt a bicycle made entirely of Canada ash, and called the "Wooden Beauty."

A copy of the second annual report of the Forestry Reserve Board of the State of New York is to hand, and found therein are details of what has been done towards establishing a forest reserve. The board was organized in April, 1897, and an appropriation of $1,000,000 made for the purposes specified in the Act. This was supplemented at the legislative session of 1898 by a further appropriation of $500,000, making a total of $1,500,000 thus far placed at the disposal of the board for the purchase of forest lands, and for the expenses incidental thereto. Up to December 31, 1898, the state had acquired title by purchase to $259,634\frac{93}{100}$ acres of forest land in the Adirondack Park, for which there was paid, in the aggregate, $1,108,143.15, or $4.26 per acre on the average.

# WOOD PULP DEPARTMENT

## THE PROCESS OF MANUFACTURING MECHANICAL WOOD PULP.*

By W. A. Hare.

(Continued from March issue.)

Pumps.—The hydraulic pulp grinder is supplied with water under two different pressures. The high pressure is used for pressing the wood against the stone, and varies about 100 pounds per square inch, according to the size of the grinder cylinder and the general practice of the operator. The low pressure is used for backing the piston and follower off the wood, and is only a few pounds per square inch. The high pressure system is supplied by a back-geared triplex pump, such as is shown in Fig. 8. This style of pump is manufactured by the Northey Manufacturing Company, Limited, of Toronto. It is designed for high pressures and heavy service, is well made, and reliable. A centrifugal pump supplies the low pressure service, to which are connected fire-hoses, cleaning-hoses, wet machine sprays, and the low pressure piping in the grinders. In large mills, it is better to install a special fire pump; but for small ones it is more economical to pipe direct to the low pressure system, and use a slightly larger pump than is required for ordinary purposes. Fig. 9 is a very good type of a centrifugal pump. It is made especially for this service by the Northey Manufacturing Company. A good feature about this particular style is its reversability, which greatly simplifies its installation. Stuff pumps are used to handle the mixed pulp and water, and for mechanical pulp the centrifugal pump is very satisfactory. A pump as is shown in Fig. 9 is suitable for this purpose. Stuff pumps handle the pulp in a large amount of water; generally the water contains 1 per cent. of dry pulp by weight. The speed and hose power required for these pumps depends on the elevation of the discharge orifice above that of the suction. Many mill designers prefer to drive the pressure and stuff pumps by belt from the grinder shaft. In small mills this may be as good a method as any, but it is open to serious objections. Owing to the varying conditions under which the grinders are working, the speed cannot be kept constant, resulting in a varying discharge from the pumps. In the case of the stuff pump this is objectionable, as it causes trouble for the wet machine man in regulating the supply of stock from the vat. The best method of supplying the high pressure system is to do so from a separate triplex pump belted to each grinder shaft. If there are two grinders coupled together, a 3″ x 4″ triplex, at 45 revolutions per minute, would supply them. This may cost more than one large pump intended to supply all; but if that pump is shut down by accident or otherwise, the load is immediately thrown off all the grinders at once, which allows them to speed up.

It is exceedingly dangerous to allow any grinder to run

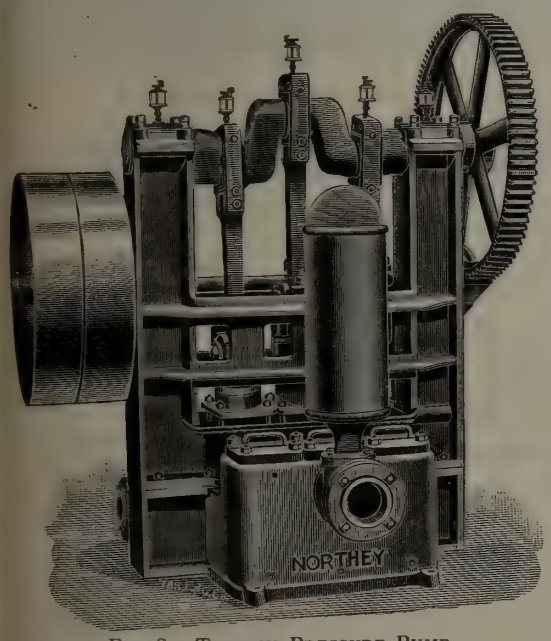

Fig. 8.—Triplex Pressure Pump.

very much above its normal speed. Owing to cracks in the stone which are not always apparent on the surface, a stone may fly in pieces even at moderate speeds, and is very liable to do so if the grinder is allowed to run away. By supplying all the grinders from a common pipe system, and driving a separate pressure pump from each grinder shaft to supply the system, we have each grinder perfectly independent of the others, and we are, therefore, at liberty to shut down any one we please without regard to the others. When a grinder is started up, its pump is started also, and takes its share of the pumping, and we always have the supply directly proportional to the demand. If a pump in the line should become disabled, its check valve, placed on its discharge pipe, instantly closes, cutting it out of the system. The remaining pumps can, for a short time at least, carry the increased load, giving the grinder man sufficient time to shut down the grinder, or to cut out a pocket or two. The grinder which was driving the disabled pump has had no opportunity to race, as the other pumps in the line continue to supply its cylinders with water at almost the usual pressure. This system has, perhaps, the disadvantage of first cost, but even in this particular, when everything is considered, it would be the cheaper method for some installations.

Method of Driving and Coupling Grinders.—Wood pulp grinders are generally run in pairs, coupled direct to the water wheel shaft. Direct driving is the usual practice, which is seldom if ever departed from. In some small plants it might be advantageous to drive a grinder by means of a large belt, but these cases are extremely rare. There is no other method that is practicable. Gearing would be out of the question, as the sudden and excessive variations in the load would render it extremely difficult to keep them in proper repair. In most cases, the only method that commends itself is to couple two grinders on the same shaft, and direct to that of the water wheels. With a certain head, for instance, the wheel that will run with a speed of about 200 R.P.M. would deliver more power to the shaft than is required by one grinder. If another grinder, of suitable capacity, is coupled to this shaft, it gives the correct speed and power for each grinder.

There is another consideration in favor of the above method of driving. If two 3-pocket machines are run by themselves from separate wheels, only two of these pockets can be used at a time on each grinder, the third being retained as a change pocket. If, on the other hand, we have two 3-pocket grinders connected on the same shaft, we can operate 5 pockets altogether, leaving the other one for the change pocket. In this way we have gained the use of an extra pocket on two machines by driving them coupled.

When a stone breaks on the inside machine, both will be idle until repairs are completed. If the outside grinder be damaged, the coupling can be removed, and the inside one run as usual.

Operation.—The first thing in starting up a grinder is to thoroughly clean it with a hose. This is to prevent specks from getting into the pulp from dirt collected in the grinder. This should be done once a week, or oftener, according to the make of the machine. The side plates of the pocket should be set down close to the stone, and, as the stone is turned down by sharpening, they should be advanced. A great deal of waste from chips and slivers will arise if this is not attended to. It is important that the supply of water should be sufficient, for two reasons: first, to keep the stone cool, and, second, to supply the ground wood with enough water so that it can be handled easily by the stuff pump. In some grinders the stone runs clear of the water underneath it, and must, therefore, be supplied by sprays near the top, or elsewhere, to keep the stone from heating. In others, the stone runs in a vat of ground pulp and water, which, as the water is changing all the time, prevents heating very effectually. There should be, even in this case, a small spray near the top of the stone, for the purpose of washing the pulp down to the vat as soon as it is ground. The vat underneath the grinder is made by placing a wier on one side, of a suitable height, so that when the pulp and water flow over it, the stone is submerged to a sufficient depth to prevent heating.

When the wood has been badly packed in the pocket it will jam, and, by bracing against the sides of the pocket, relieve the stone of the pressure. This is easily fixed by letting off the pressure while the wood is loosened up with a short bar, and then turning the water on again. This jamming is not so liable to occur with round sticks as it is when the wood has been split. Sometimes, with round wood, the blocks will roll in the pocket. This can be prevented by having strips cast on the follows. When this is not done, it can be remedied for the time by loosening up the pocket, or by repacking. In a good grinder there should be very few chips formed. In many cases, in fact nearly all, this is caused by carelessness in setting the side plates of the pockets. As the wood grinds down to a thin shim, it is carried under the plate, and is not ground. If the plates are just clearing the stone, the wood will be almost completely ground before the shim can get through. Grinders should be provided with sufficient space between the stone and the sides to allow for the free escape of pulp and water, or else it will flow over the floor when the door is opened. This space should be so constructed as to prevent shims, etc., getting in, which might cause trouble. In some mills machines are used for grinding chips and shims, but, as far as the chips from the grinders are concerned, it is unnecessary unless the grinders are faulty. In any new mill, if good grinders are bought, this will not be required.

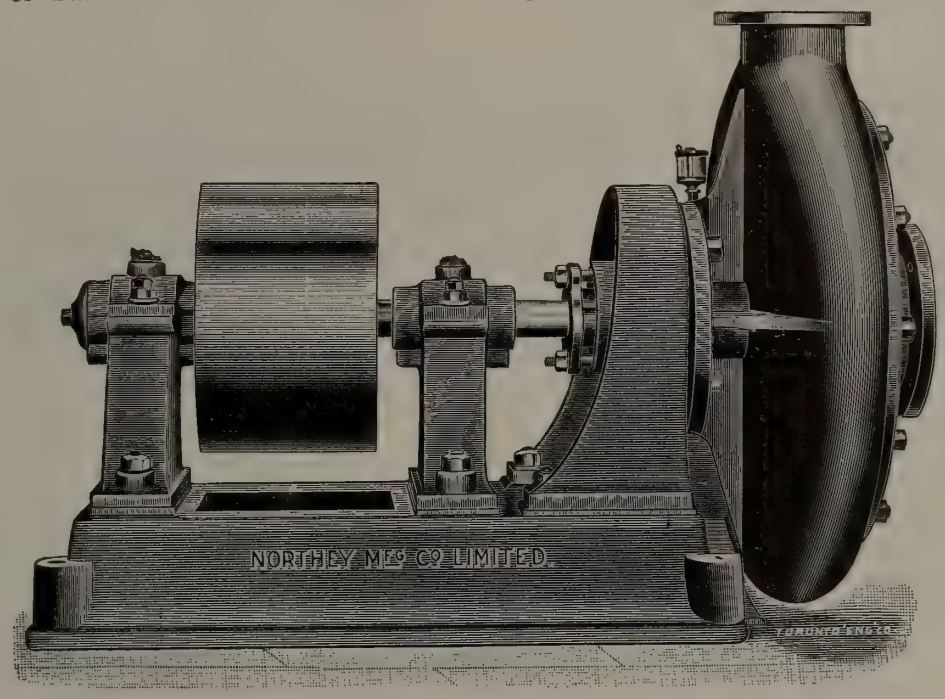

Fig. 9.—Horizontal Centrifugal Pump.

The principal agencies that influence the quality of the pulp ground from any given wood are, speed of the stone, pressure used to press the wood against the stone, and the sharpening. The first two have considerable influence, and should be carefully looked after; but it is in the sharpening that the secret lies for the manufacture of a good uniform product. The influence of the speed is important, and the best practice is not to exceed a circumferential speed of 2,800 ft. per minute, which corresponds to about 200 revolutions per minute on an ordinary sized stone. It may go higher than this at intervals, but it is not good practice to grind at a much increased speed. When the stone is running too fast, apart from any danger from bursting, there is a tendency to heat the surface, which cracks when it is chilled by the water, and so destroys the cutting surface of the stone. This is only true when the speed is excessive, but even if running normally at a speed much exceeding 200 revolutions per minute, there is a tendency to gloss the stones, which is detrimental to its cutting capacity. With a slow speed, the wood is pressed completely into the stone, and thereby a longer fibre is produced.

With regard to the pressure used, there seems to be a great difference of opinion among pulp manufacturers, but heavier pressures are of more common use now than formerly. To increase the pressure is, in nearly all cases, to increase the output of the grinder, provided that the power is sufficient. In some of the Nova Scotian mills a pressure of about 15 pounds per square inch is used on the grinding surface. This seems to be an average, though for special products it may be as high as 17 pounds per square inch of the cutting area. It is seldom allowed to drop below 13 pounds in any case.

The question of sharpening is also one upon which many different opinions may be expressed; but no attempt will be made to specify which is correct, the writer simply giving his own experience. In sharpening for different products no rule can be laid down; each man has a way of his own which he thinks is the correct one. One fault that is often made is to use one jig too often. This, after one or two cuts are made, does not improve the surface, as the points on the jig run in the same holes. For "news" pulp the writer has found an 8 to the inch jig to work first-class, also a 6 to the inch is another good size. A good surface is made by making a light cut with a 4 to the inch jig over the other size, which breaks the holes and makes a more uniform surface. If the same jig is used too often it will make a pitted surface, which is not a good cutting one. Over-sharpening is a thing to be guarded against, as in that case the pulp is inclined to be short in the grain, or mealy, is hard to screen on account

* Paper read before the Engineering Society of the School of Practical Science, Toronto, and published by permission.

of the thickness of the fibres, and is difficult to remove from the wet machine, as the sheet will not hold together. When a stone has been over-sharpened by carelessness or otherwise, it may be restored by simply rubbing the surface with a brick. Some pulp makers prefer to sharpen this way, i.e., by over-sharpening at first and then reducing the cuts on the stone, by means of a brick, until the right degree is reached.

A very good point in the construction of a grinder is to have the stone accessible while in operation. Some machines have to be stopped and certain alterations made before the stone can be sharpened. While this is being attended to, the opportunity is generally taken to clean them out, and in this way the disadvantage of not being able to sharpen while running is in some manner counteracted. The sharpening jig is a cylinder of steel, about 3½ inches long by 3 inches in diameter. It is cut on its surface by a heavy V thread, and also milled parallel to its axis by an equally heavy V cut. The resulting surface consists of a number of square, sharp-pointed pyramids. The jig is drilled throughout its length with a 1-inch drill, and mounted in a frame by a bolt passing loosely through this hole, so allowing it to revolve freely thereon. The frame also has on it a forged ring, which is made to engage a bolt on the grinder frame. This bolt passes across the face of the stone, and a few inches from it. The frame has also a suitable handle, by means of which it is guided by the workman. In operation, the bolt is passed through the ring and secured in the grinder frame. The workman can now girdle the jig across the face of the stone, against which it revolves. By bearing on the handle the pressure is applied, which causes the points of the jig to cut the face of the stone, making on it a rough pitted surface.

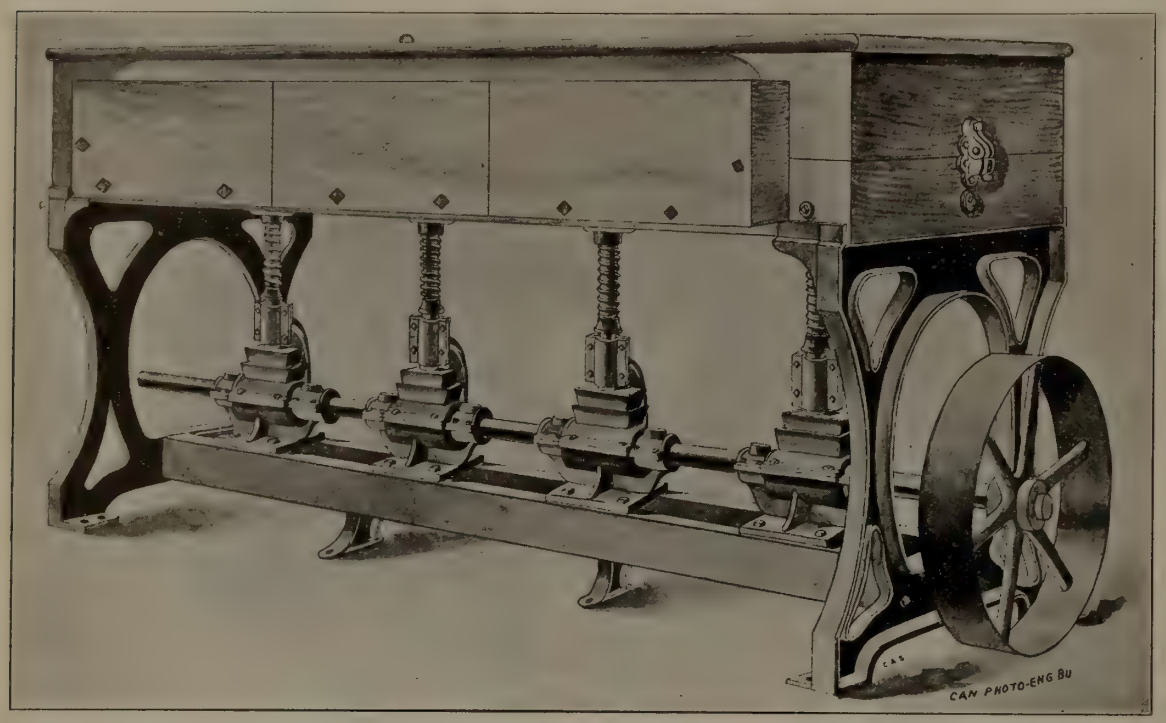

Fig. 10.—Vibrating Diaphragm Pulp Screen (Manufactured by Jenckes Machine Co.)

Method of Changing and Mounting Stones.—The stone is secured to the shaft by means of large flanges of steel, one on each side of it. These flanges are turned true on their face and are threaded right and left hand on the shaft. By this method the torsional strain on the stone due to the grinding tends to make the flanges grip tighter. There are two principal methods of securing the stone to the shaft, one being an improvement on the other. The first method is to screw the flanges up as tight as possible, taking care that the stone is centered, and then to pour in cement around the shaft and flanges, through a small channel which had been previously cut in the stone. This method is in use in the majority of cases and seems to answer the purpose very well. The second method is very much like the first, but in addition to the cement and threaded flanges, the flanges are bolted together by 1-inch bolts, running through the stone from side to side, which are tightened up before the cement has become hard. When the cement has set perfectly hard the stone can be turned off and trued up. The addition of the bolts in the second method adds considerably to the strength and solidity of the whole machine as well as providing a safe-guard against bursting. For this purpose alone, it would almost be advisable to introduce them.

Setting Stones.—When the stone is set in, it is very irregular on its surface, and must be turned off true before using. For this purpose an attachment is used which in its motions resembles the slide rest of a screw cutting lathe. It consists of a frame, which is placed on the grinder base, where it is bolted down firmly. On this frame there runs a carriage which is moved laterally across the face of the stone by means of a screw and hand wheel. Mounted on this carriage is a similar one, which moves at right angles to the surface of the stone, and is actuated also by a similar screw and hand wheel. On this top carriage is fitted a jig, similar to that used in sharpening, though generally a dull one is selected for turning off a stone. With this machine a stone can be turned down to the required size, and made true on its face. It is best in turning off a stone to make the face slightly crowned or else to turn down near the edges more than at the centre. This prevents to some extent the spauling of the stone from the pressure of the wood. Great care must be taken that in turning down the stones no cracks are made in it, for, if any exist, the piece will very likely fly out when the pressure is applied. This, of course, will ruin the stone eventually, even if it is a small piece, as when one piece is broken out, others quickly follow. It is bad practice to run a stone after it has been spauled. In handling the stone when bringing it into the mill, it should, if possible, be slung from a carrier by ropes passing through its centre hole. As this is not provided for in many mills, the next best thing is to roll it on strong palnking, taking care that it is only bearing in the middle of the face and not near the sides. It should, in all cases, be eased by ropes and blocks, so as to have it at all times under control. If care is taken, a stone can be mounted without the edges becoming spauled more than will be completely removed by turning down and trueing.

Description of Screens.—When the pulp and water leave the grinder, it flows along the troughs placed underneath the floor of the grinder room to the large trough, into which every grinder discharges. In this large trough are sprays, which supply sufficient water for the pulp to flow along it. At the end of this trough is placed a large tank covered over with iron plates, which are perforated

with holes about ¼-inch in diameter. The pulp and water falls on this screen, and flows through to the tank underneath, while all large splinters, chips, etc., are collected on the perforated plates. The stuff pump draws the pulp from this tank and discharges it in the large trough in the wet press room. The screen of plates prevents any large pieces from entering the stuff pump, which would cause trouble if allowed. The trough into which the stuff pump discharges is made of 2½ inch pine planks, its size depending on the capacity of the mill. A 15 ton mill would require one about 20 in. wide by 24 in. deep. This trough runs the whole length of the wet machine room and is tapped, at intervals, for each screen. Each outlet is provided with a trap gate, or if the outlets are wrought iron pipes, a valve is used. It is also necessary to provide the trough with an overflow connected to a pipe running back to the tank in the grinder room. This will be found extremely useful in case of a stoppage in the wet press room, if the stuff pump is not driven from the same water wheel as the wet machines. From the large trough the pulp is led to the vibrating diaphragm screens, a cut of which is shown in Fig. 10. This type of screen is in general use in America, and has been found very satisfactory. The machine is manufactured by the Jenckes Machine Co., of Sherbrooke, Que. These screens are built to contain ten or twelve plates as desired, the usual size of the plates being 12x36 inches or 12x40 inches. The cradle, or frame containing the screen plates, is hinged to the water box, and when raised, permits the cleaning or examination of the plates. The water box is built with a partition in the centre, forming two compartments, each of which is provided with a diaphragm, supported on two vertical spindles passing through the guides, shown in the cut, and carrying the knockers, or cam shoes, at their lower ends. The usual flexible connection between the diaphragm and the sides is affected by india rubber. The stock box is bolted in front of the water box and is provided with a brass valve for regulating the supply of stock. The side frames are of cast iron, connected by an angle iron distance piece, which carries the bearings for the cam shaft and which is also provided with stands underneath, thereby considerably reducing vibration. The bearings for the cam shaft are babbitted and are placed on either side of each cam. These cams are made to give from one to four throws per revolution according to the speed of the cam shaft. The arrangement of the cams with relation to the diaphragms is such as to insure a constant strain on the driving belt. Springs are placed on the vertical rods, which keep the knocker always in contact with the cam, thereby avoiding vibration and noise. The usual speed of the screen is about 350 to 400 vibrations of the diaphragms per minute.

The screen plates are cut in fine slits. The size of these slits will vary according to the stock to be screened. For fine stock the cuts will be from .012 inch to .014 inch, though larger sizes are more usual. The capacity of these screens varies with the speed. At a speed of 600 R. P. M. they should screen 5 tons of well ground stock per 24 hours. In operation the upward movement of the diaphragm forces air and water up through the cuts in the plates, thereby cleaning them. On drawing down again, the pulp and water are sucked through the slits, and that which will not pass through remains on the screen plates. Sufficient water is necessary to keep the pulp in suspension.

## PULP NOTES.

Several English capitalists were at St. Stephen, N.B., last month looking over the available sites for a pulp mill. Options on the water powers of Sprague's Falls and Grand Falls have been secured for the syndicate by Mr. David Maxwell, C.E.

Mr. Chas. Burrill, of Weymouth, N.S., recently returned from Great Britain, where he endeavored to interest British capital in the pulp industry in Nova Scotia. He expects that arrangements will be completed at an early date for the building of another pulp mill on the Sissiboo river.

Mr. W. W. Fisher, a pulp mill expert of New York, with Mr. Nailer, have gone to England for the purpose of promoting a company to engage in the manufacture of pulp at Parrsboro, N.S. Mr. Fisher has recommended the construction of three 35-ton pulp mills, with a paper mill in connection.

At a meeting of the shareholders of the Cushing Sulphite Fibre Co., held in St. John, N.B., recently, Capt. Edward Partington, of Manchester, Eng., was elected president; Joseph Allison, vice-president; J. S. Gregory, secretary-treasurer, and Geo. S. Cushing, managing director. It was stated that Capt. Partington had agreed to take two-thirds of the stock of the company, and that plans for the pulp mill were being prepared under his supervision. The work will be proceeded with during the coming summer.

# R. H. SMITH CO., LIMITED

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

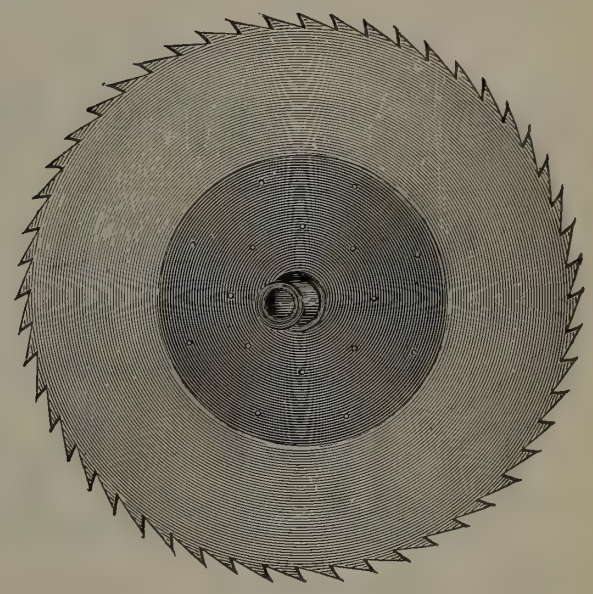
CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



## THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## CANADIAN PACIFIC RAILWAY COMPANY'S SAW MILL AT COAL CREEK, B. C.

ONE of the largest saw mills yet built in Canada has recently been completed at Coal Creek, on the Crow's Nest Pass Railway, in the province of British Columbia, for the Canadian Pacific Railway Company. Some illustrations and particulars of its construction are given below.

The main mill building is 60 feet wide and 310 feet long, with a lath and shingle mill annex 41 feet wide by 48 feet long, besides an engine and boiler house 44 by 71 feet. The building of the mill was no easy task, owing to circumstances not usually met with. When the Wm. Hamilton Mfg. Company, of Peterboro, who had the entire contract, sent their men out to commence the erection of the building, nothing was done save the clearing of the site and the placing of some of the timber on the ground. They immediately set to work and got out the whole of the timber, which entailed much labor, as it had all to be taken from the forest near at hand and the trees cut down and hewn to shape. All planking required in the construction had to be whip-sawn, as there was no way of hauling such a large quantity of timber to the mill site, the rails of the Crow's Nest Pass Railway not being laid at that time to within fifty miles of the site of the mill.

The first illustration shows the mill building completely framed, which will give our readers an idea of the dimensions of the mill, which is designed to cut logs 5 to 6 feet in diameter and

FIG. 1.—VIEW OF MILL FRAME, C.P.R. MILL.

80 to 90 feet long, and turn out lumber in first class condition. The logs are hauled to the mill by rail and dumped into the pond formed by the breakwater and dam shown in the accompanying illustration, Fig. 3, the dam being at the lower end.

The jack ladder leading to the mill, and up which the logs are hauled by means of a heavy endless chain, is 120 feet long. When logs enter the mill building they are landed on a series of heavy concave cast iron live rollers, which carry the log to the end of the log deck, which is 100 feet long. Set in between one of the two sections of these rollers is a heavy steam jump-up saw which is used to cut off logs to any desired length to be sawn. The logs are thrown to either side of the mill by means of steam log kickers, and roll down incline to position, ready to be placed on the carriages.

On the left hand side of the mill is a large circular rig, with top and bottom saw mandrils,

FIG. 2.—VIEW OF JACK LADDER, C.P.R. MILL.

each carrying 60 inch Hoe inserted tooth saws. The carriage for this rig is of the well known Pacific coast type, with screw headblocks, having knees receding 60 inches from the saws, and is capable of taking a log five to six feet in diameter and eighty to ninety feet long. The set works on this carriage is operated by power and is quick and accurate in its action, setting to within a small fraction of an inch. The logs are handled to this carriage by means of two heavy straight line steam canters, each having one vertical and one horizontal cylinder.

After the logs are cut up into the dimensions required, they pass on a line of live rollers which extend to tho end of the mill, and long pieces are cut to the desired lengths by steam jump-up saws, of which two are set in between the rollers. If the logs are cut into cants, they are carried across the mill by means of transfer chains to be cut up by an improved Prescott No. 3 band saw mill, having wheels 8 feet in diameter. The carriage on this side has knees receding 54 inches from the saw, and will take logs or cants 40 to 50 feet long. Logs can also be taken on this side from the log deck, and both cants and logs are turned by one heavy steam canter of the same size and kind as that on the circular side.

The feeds of both carriages are the well known Cunningham patent twin engine steam feeds, with drums grooved for wire rope, the one on the circular side having cylinders 14 inches in diameter, and that on the band mill side having cylinders 12 inches in diameter. On this side likewise there is a complete line of live rollers to the end of the mill to carry finished stock out. Should any boards or plank require to be edged from either side, they are transferred to the edger by means of chains. This edger is the heavy Pacific coast type, and is 60 inches wide, having six 24 inch Hoe saws, all movable. After the boards are edged, they again pass over live rollers to a transfer which conveys them to the trimmer, there to be trimmed and made ready for market. The edgings are dropped from the rollers back of edger on to transfers, which carry them, as well as the slabs, to a set of slash saws to be cut into the proper lengths, and from there they pass into a refuse conveyor which carries them to the lath and shingle mill annex, to be sorted out and cut up into lath and shingles. This annex has its complementary machinery, consisting of cut-off saw, lath mill and bolter, lath trimmer, two Perkins shingle machines, knot saws, packers, and everything to make it complete.

All the refuse from the mill, except the sawdust from circular band mill and edger, is conveyed 150 feet away from the mill by conveyor chains to a steel refuse burner, which is 30 feet diameter and about 100 feet high, brick lined, having an enclosed wire cloth top.

The machinery in this large mill is driven by a pair of heavy Corliss frame slide valve engines, with cylinders 20 inches diameter and 24 inch stroke, coupled, the fly wheel pulley being 10 feet diameter and 50 inch face. Steam is supplied by six steel tubular boilers, 60 inches diameter and 16 feet long, which are complete in all respects, with the usual fixtures and fittings,

FIG. 3.—VIEW LOOKING DOWN THE RIVER, SHOWING BREAKWATER AND MILL IN THE DISTANCE.

including two smokestacks 54 inches diameter and 75 feet high. The boilers are fed with sawdust from the circular, band mill and edger by the usual system of conveyor chains.

The entire mill was erected and all machinery built by the Wm. Hamilton Manufacturing Company, Limited, of Peterboro, Ont., who have a branch office in Vancouver, B. C., and under the direct supervision of their constructing engineer, Mr. I. N. Kendall.

On the following page will be found illustrations of the camp and the construction gang.

# REQUISITION FOR AN IMPORT DUTY.

THE DOMINION GOVERNMENT AGAIN MEMORIALIZED TO EQUALIZE CONDITIONS IN THE LUMBER TRADE.—THE SITUATION REVIEWED BY WESTERN MANUFACTURERS.—TWO DOLLAR DUTY ON LUMBER IS WANTED.

A deputation from the Lumberman's Association of Ontario waited on the Dominion government on the 8th ultimo, and asked that an import duty be placed on lumber, shingles, and lath, corresponding to the duty on like products

VIEW OF CAMP AT COAL CREEK—C.P.R. MILL.

imported into the United States. The position of the lumbermen was clearly set forth by memorials and statements by Messrs. John Bertram, James Scott, John Waldie, C. Beck, J. E. Murphy, Thos. Conlon, D. C. Cameron, The Sutherland-Innes Company, and P. D. Gordon, the latter representating the British Columbia Lumber and Shingle Manufacturers' Association. Lack of space prevents the publication of the statements in full, but a synopsis of each is given below:

'MEMORIAL FROM LUMBERMEN'S ASSOCIATION.

A memorial on behalf of the Lumbermen's Association of Ontario was presented by Mr. John Bertram, the president.

CONSTRUCTION GANG—C.P.R. MILL.

This embodied the various resolutions setting forth the views of the association as expressed at different meetings, and which have already appeared in this journal. The memorial concluded as follows:

We do not come asking for protection against the competitor we are not able to meet, but only for fair play, and in the present keen competition for business do not want to occupy a defenceless position.

The lumbermen of Canada are operating on one of the greatest material resources in the Dominion; incidental to their business they are converting into current merchandise a vast amount of raw material, and while quite willing to enter the markets of the world in free competition, they do not wish their own markets troubled with an irregular and disturbing force. Through the varying demands of commerce lumber may at one time be cheaper in the United States than in Canada, and vice versa; free and open competition the lumbermen in Canada are willing to abide by, but are averse to carry on a commercial battle with hands tied behind their back. If the Americans are to be at liberty to make a raid over the border on our trade, we want to be able to strike back in the most friendly fashion. As the interests of the Dominion are wide and far-reaching, we must be helpful to each other and stand or fall together. No word of opposition has been heard to our views from the Maritime Provinces or Quebec, and, indeed, they have only a languid interest in the question. They are not liable to attack, like Ontario and British Columbia, who are almost unanimously of the opinion that we should, in self-defence, impose on lumber the same duty as our neighbors.

If a small corner of territory is fearful that they may by carrying out this policy have to pay a little more for their lumber, they can hardly dominate the Dominion, and reasons will be offered to you to show that their fears are ill-grounded. We have no desire whatever to hamper the important work of the High Commissioners, and express our confidence that any agreement they may come to in the pending negotiations our interests will be safeguarded.

MR. SCOTT'S STATEMENT.

Mr. James Scott, of the Georgian Bay Lumber Company, reviewed at some length the conditions existing in the Canadian lumber industry. This industry was admitted to be, next to agriculture, the most important in Canada. To-day the trade in lumber between Canada and the United States stood on a different footing from that on which it stood in years gone by. As far back as 1870 an import duty was imposed by the United States, but the very favorable conditions then prevailing here enabled the Canadian producer to compete with the American producer in his own home market. Those conditions, however, did not now exist. At the present time the cost of production is quite as high, if not higher than, in the United States. The American producer had the advantage of being able to utilize nearly every part of the log at his mill door, and of being able to find at home in a free market ready sale for all the products, including what is to the Canadian an expensive waste. The Canadian manufacturer had to construct expensive plant for the destruction of such waste, thus losing doubly as compared with the American.

Mr. Scott pointed out that for several years southern pine had displaced white pine for many purposes even in the markets of the United States. It was produced entirely by negro labor and from standing timber which cost the producer merely a nominal sum as compared with the cost of Canadian pine. The American lumbermen had another advantage in cheaper transportation both by rail and water, but particularly by rail, owing to the keenness of competition by rival lines in the United States.

The Canadian lumbermen, Mr. Scott stated, made no objection to the United States duty on Canadian lumber, that being a matter entirely within the right of the United States Government. He admired the spirit which led to the adoption of this course, but had not the same admiration for a condition which gave to the American the control of his own market and permitted him to turn to Canada and dump on us the surplus products of his mills. Having a large absorbing market at home, he could afford to sell in Canada at lower prices, and these lower prices determined the prices of the Canadian product.

STATISTICS BY MR. WALDIE.

Mr. Waldie, president of the Victoria Harbor Lumber Company, presented statistics and data showing the conditions that have prevailed during the past four or five years, beginning with the period when the mills of Michigan found the pine trees tributary to their locations along the east coast exhausted. Several manufacturers then removed to the western end of Lake Superior, with the result that the products of mills erected in that district had a disturbing effect upon the trade not only of Western Ontario, but all through the Northern States. The market was glutted and prices sent down below the cost of production. The condition which existed in 1896 was the cause of bringing about the legislation of a pro-

* Now have mills in Canada. † Limits sold to Canadians. ‡ Limits now cut off.

tective character known as the Dingley Bill. Under this bill the mills in the Duluth district had a decided advantage, being permitted to exploit the Manitoba, Western Ontario and United States markets, while the Canadian millmen were deprived of the privilege of competing in the United States market.

While the Dingley Bill was looked upon as unfriendly egislation to Canadian interests, Mr. Waldie believed hat it would really prove a benefit, as prices to-day were from 10 to 20 per cent. higher than they were one year ago, with the probability that ten of the saw mills on the Georgian Bay that were closed last year (capable of manufacturing 150,000,000 feet) would operate this year. Mr. Waldie contended that owing to the rapid change and developments that take place, past history and experience were not safe guides to follow. In the year 1888 there were not one million feet of saw logs exported from Canada to the United States, while in 1896 there were 272,000,000 feet, in 1897 202,000,000 feet, and in 1898 233,000,000 feet—a total in three years of over 700,000,000 feet of saw logs. During this period the quantity taken off by Americans amounted to 487,185,937 feet, and the quantity sold or taken to American mills by Canadians was 220,248,385 feet.

Ten years ago the product of sawn lumber going from Canada into the United States was to the value of over $7,500,000, while in 1898 it was less than $3,000,000. Therefore, while the Americans had free access to the forests of Ontario to supply their sawmills with logs, the quantity and value of the logs taken from Ontario had increased until they exceded the quantity and value of lumber shipped into the United States from the whole of Ontario, including the Ottawa district. Mr. Waldie presented the accompanying statement of logs exported from the Georgian Bay district in the last three years.

As to the grounds of opposition of the duty on lumber, Mr. Waldie said that the people of Manitoba were in a position to-day which made it unnecessary for special consideration being given to that province to the detriment of the others. There was no argument that could be used to prove that Manitoba should have free lumber that would not apply in favor of Manitoba having free agricultural implements, and no injustice would be done to Manitoba in giving the Georgian Bay lumbermen the advantage of their market and shutting out the Minnesota product.

### MR. BECK'S REMARKS.

Mr. Chas. Beck, of Penetanguishene, pointed out as an example of United States competition that before American lumber came in free, our lumbermen had a good trade with the railway companies for Norway pine sills. They were now getting their principal supplies from the Southern States. He cited the rebuilding of Gravenhurst and Midland stations, which were finished with Georgia pine. He did not believe that a duty would increase the price of lumber in the North-west. He had shipped lumber from his Penetanguishene mill, shipping by boat to Fort William and from there west by rail. He found prices in the North-west very good and realized more for his lumber there than in Ontario, notwithstanding the long haul and extra handling at Port Arthur. He believed that instead of prices being advanced as a result of the duty they would more likely be reduced.

### THE TRANSPORTATION PROBLEM.

Mr. Thos. Conlon, of Thorold, dealt chiefly with the question of transportation. Cargoes both ways, he said, were a necessity for successful navigation, and this was our greatest drawback in carrying grain from Fort William. Yet during last summer Manitoba bought from Minnesota 38,000,000 feet of lumber, while Canadian vessels were going light, right by Canadian mills that were looking for a market for twice as much lumber as Manitoba consumed. Mr. Conlon said that his brother and himself had a couple of small vessels, carrying grain from Fort William since that port commenced to export it, and never yet had they been able to send a cargo of lumber to Manitoba on account of the C. P. R. rates from Fort William being too high, although they hauled their cars back light. Now, however, the C. P. R. were willing to lower their rates to a fair basis if the Government put a duty on American lumber. Here was an opportunity for the government and the C. P. R. to open up this new trade in lumber with Manitoba. If the C. P. R. would carry lumber on a ten cent rate from Fort William to Winnipeg, the same as with grain, they would open up a profitable trade for themselves, a new market for Ontario lumbermen, and give cheaper lumber to Manitoba, and the only persons hurt would be Mr. Tawney's friends in Minnesota, who were now pouring lumber into Manitoba free of duty, after having shut Canadian lumber out of their market. If we had furnished that 38,000,000 feet last year instead of Minnesota, Canadian vessels would have earned $50,000 in freight and the C. P. R. $100,000 more, instead of hauling back empty cars. Mr. Conlon submitted a list of prices of lumber in Winnipeg, stating that on a ten cent rate he would be prepared to sell several cargoes on that basis.

### VIEWS OF MR. D. C. CAMERON.

Mr. Cameron, president of the Rat Portage Lumber Company, submitted a statement to show that an advance in the price of lumber would not result from an import duty. Instead, the price would remain the same, but the trade which was now divided would flow naturally to Canadian manufacturers, giving employment to many thousands of Canadians and increased trade to Canadian merchants and manufacturers. Canadians, he said, were capable of producing lumber as cheaply as their American competitors, if conditions were equal, and having more than a sufficient supply of timber for our consumption, no necessity seemed to exist for allowing foreigners into our markets, without at least contributing something to the revenue of the country. As showing that prices would not be increased to the settlers of Manitoba and the Territories, he stated that Western Ontario contained billions of feet of valuable pine timber, the only natural market for which was Manitoba and the Territories. All the timber west of Lake Superior on Canadian territory is tributary by water to the Canadian Pacific Railway and the proposed Rainy River Railway. The South-Eastern Railway, which touches the Lake of the Woods and then crosses the great Rainy river, traverses the best timber lands remaining in the possession of the government of Ontario, and furnishes an outlet for a supply of timber for our prairies for many years to come. With these easily accessible forests, there could be no possible excuse for fearing a lack of competition by Canadian manufacturers of lumber in the western part of Canada, to say nothing of the supply on the shores of Lake Superior and Georgian Bay. During 1898 about 38,000,000 feet of lumber, besides large quantities of shingles and laths, were admitted free of duty into Manitoba. This lumber was worth, when delivered in Manitoba, about $15 per thousand. Therefore, the sum of $540,000 for lumber and about $60,000 for lath and shingles was paid by Canadians for American product, without any corresponding advantage, while there are mills in Western Ontario, which cost hundreds of thousands of dollars lying idle, and rotting to the ground for want of a market for their products.

The Canadian consumer, Mr. Cameron said, had nothing to gain by having lumber on the free list ; on the contrary, he was the loser to the extent of the money which is paid to a foreign country for a product which should rightly be manufactured in Canada. Mr. Cameron read a resolution passed by the Board of Trade of the Rainy River district requesting the Dominion government to impose an import duty on lumber.

### THE HARDWOOD INDUSTRY.

Mr. J. E. Murphy, of Hepworth, vice-president of the Ontario Lumberman's Association, referred particularly to the hardwood industry. After reviewing the situation as to the tariff, Mr. Murphy said: In the face of conditions of the lumber trade as they now exist, it would be a wise and popular move on the part of the government of Canada, in my humble opinion, to impose a duty on lumber and shingles coming into this country and place an export duty on pulpwood leaving this country in an unmanufactured state. The Americans, like ourselves, are producers and exporters of hard and soft wood lumber and manufactures of wood. So long as they can use our raw forest product, just so long will they meet us in foreign markets with the manufactured lumber. It will not be many years till their forests will disappear or become depleted of marketable timber. Our supply is practically inexhaustible at the present rate of consumption. The hardwood forests of this country are a splendid asset and once destroyed cannot be reproduced as readily as soft wood or pine. The world's consuming market is hungry for lumber and manufactured wood goods, the latter particularly in hardwoods. These markets are as free to us as to our American competitors. We are as yet a young country in the art of manufacture, but we will improve with age. We are not yet as well able to compete in the foreign markets with our American neighbors as we will be. This is largely due to their greater wealth, their larger home market and their great combines and aggregations of capital which is used in the establishment of huge manufacturing plants to turn out manufactures of wood for the home and foreign markets. In this respect they have become great and conspicious. It has taken time for them to accomplish this. We will also become great in the art of wood manufacturing, but it will take time, population and capital ; all of which we will acquire in time. We have a country possessing all the natural advantages of our neighbors. We are rich beyond measure in our forest possessions, in both hard and soft wood. Let us preserve these forests. Cherry, oak and rock elm have almost entirely disappeared from the forests of Ontario, where these woods were once plentiful. Let us be warned by this fact and protect what we have left. Hardwood forest are not nearly so liable to destruction by forest fire as pine. We cannot readily reproduce them. We will need all we have when we become greater in the arts of manufacture. Foreign enquiries for our lumber and manufactures of wood are daily becoming more and more frequent. We are perhaps a little slow in learning accurately the wants of foreign markets, and becoming lberal caterers thereto, but we will get there in time. True, the Americans want our high grades of hardwoods, and in many instances the prices they pay warrant our manufacturers in shipping the best lumber to them, notwithstanding the $2.00 duty. This leaves a very considerable percentage of low grade on the hands of the manufacturer not easily disposed of. The Americans won't have it. We have no home consuming market for it of any consequence, and its grade will not permit its exportation owing to freight being too high. During the past year our American neighbors have enjoyed a free market in the Dominion of Canada for three million dollars' worth of lumber and forest products, while every board they have taken from us has been compelled to pay a duty of from one to two dollars per M. Were we not extensive producers of lumber greatly in excess of own manufacturing requirements, these facts might be more readily over looked.

In conclusion, let me say to our Canadian legislators that conditions at present existing in regard to lumber tariff are decidedly unfair and, as it were, jug-handled. We want a lumber tariff to protect our home market similar to that given by the American government to their own lumber producers

### EXPORT OF CANADIAN LOGS.

The following memorandum regarding the export of Canadian logs was submitted by the Sutherland, Innes Co., of Chatham, Ont :

The most serious problem that is at present confronting the sugar refiners, flour and corn meal millers, salt manufacturers, cement manufacturers, and other users of barrels, is where they are going to get their cooperage stock in years to come, so as to make the barrels required by them.

The forests of Canada are being rapidly denuded of elm, oak, basswood and ash, not so much for manufacturing into cooperage by Canadian millmen, but by jobbers who export the logs to foreign countries, there to be manufactured into staves, hoops and heading. Ten years ago the counties of Essex, Kent, Lambton, Elgin and Huron had apparently boundless forests of virgin hardwoods ; to-day it would be difficult to find a solid 200 acres of forest.

What has become of all this timber? Has it been used by the mills in these counties? Our answer is, only to a very limited extent, and while there is over $2,000,000 invested in mills and 4000 to 5000 men employed annually in these counties at the mills and in the woods getting out timber for these mills, only a tithe of the timber has been used by these factories.

What has become of the timber? First, the Dawn tramway in Lambton, then the tramway of the Anchor Company of Detroit in Kent, then the L. E. & D. R. R. through Essex and Kent, have been taking out the finest timber in these counties to the Detroit river, Sydenham and Lake St. Clair for export to mills at Detroit, Wyandotte, Trenton, Mount Clemens, New Baltimore, Fair Haven and Algonac, while the timber along the Lake Erie shore has been taken over to Sandusky and also to Wyandotte and Trenton. Huron has contributed its timber to build up Michigan mills, also to the disadvantage of the Canadian industries.

The market in Canada in the past was not large enough to consume more than a small amount of the manufactured stock, the European market had not got into the way of using Canadian stock, and consequently the only market for the surplus manufactured stock was the United States, protected by a duty of 10% on staves and 35% on hoops and heading. Manufacturers in the United States were and are enabled to pay a higher price for logs than Canadian manufacturers could or can afford, the consequence being that the logs, instead of being manufactured into cooperage material in Canada, have been exported as they came from the woods, to the great loss of the Canadian people.

If we are to develop Canada, let us insist on our logs being turned into the manufactured product before it leaves our shores, build up our own manufacturing industries, keep our young men, the bone and muscle of our country, at home, and distribute the money required to run these factories among our people. There are two ways to do this, either by putting a large export duty on logs and bolts or by prohibiting the export of logs and bolts altogether. The latter we believe the most feasible and one that would do away with any cry of retaliation from our neighbors. Should our neighbors go in for retaliation, they would be the only ones that would get hurt, as the demand for cooperage stock in Canada and for export to Europe is now getting nearly on a par with the production, and it would simply mean that if a higher duty was put on Canadian stock going into the United States than at present exists, the consumers in the United States would either have to pay the increased duty or not get the stock.

We might point out to you that the 35% duty on hoops and heading shuts out this stock entirely from the U.S., and it is only staves on a 10% duty that goes in from Canada.

If the U. S. admits cooperage stock from Canada free, the manufacturers here would be able to compete for logs with U. S. buyers, but as it is, the mills in Canada lie idle half the year, while our finest logs go to keep the U. S. mills running.

Let us therefore all pull together and support the Canadian government that will prohibit the export of logs from Canada entirely.

Resolutions passed by the British Columbia Lumber and Shingle Manufacturers' Association and the Boards of Trade were presented by Mr. P. D. Gordon. These will be found elsewhere.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Special pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the tr Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## DISCRIMINATION IN MARINE INSURANCE RATES.

LLOYD'S underwriters have discriminated against Canada in the matter of insurance rates. Such was the announcement definitely made within the past month. Mr. E. L. Bond, president of the Marine Underwriters' Association, Montreal, who returned recently from England, states that this course has been decided upon as the result of the losses which the insurance companies have sustained in the St. Lawrence, and that nothing short of great improvements in the route, such as lighting, buoying and signalling, will induce the English companies to reduce the present advanced rates. In comparison with last year, the advance is between twenty and thirty per cent.

This action on the part of the underwriters must seriously affect Canadian shipping interests. Yet we cannot question the right of the insurance companies to make such rates as are commensurate with the risk. The onus is upon the government of this country, who appear to have neglected to carry out such improvements as would have removed any possibility of conditions such as now exist. The improvements may now be undertaken, at no less cost than if carried out five years ago, while for one season at least shippers will suffer from excessive rates. Furthermore, it may be a difficult task to secure the restoration of the old rates even when the St. Lawrence route is improved.

From what can be learned, the discrimination is not confined to St. Lawrence ports, but includes the ports of New Brunswick and Nova Scotia as well. This is certainly unjust discrimination. Because the navigation of the St. Lawrence is difficult is no reason why the insurance rates on vessels going to St. John, Halifax and other eastern ports should be advanced.

The extra rate charged in summer from St. John, N.B., as compared with Bangor, Maine, is said to be equal to a discrimination of ten shillings per standard on deals. A preference to this extent is given to ships going to ports of the United States, and by a British association. This looks like a reversal of the preferential arrangement.

## THE BREACH WIDENING.

IN trade relations, Canada and the United States appear to be getting further apart. The negotiations by the High Commission having, practically, ended in naught, the people of this country are showing a desire for legislation on the basis of "Canada for Canadians." Never in the history of the country has so much interest centred in the lumber trade. Three weeks ago a deputation representing the Lumbermen's Association of Ontario waited upon the Dominion government and requested that the tariff be amended by placing an import duty of two dollars on lumber, 30 cents on shingles and 25 cents on lath. A strong case was presented, as will be observed by reference to abstracts, appearing elsewhere, from papers presented for the consideration of the government.

Opponents of the imposition of such a duty have endeavored to make capital out of the fact that very few of the Ottawa valley lumbermen were present at the conference. It has been said that they refused to join the deputation. On the contrary, they were not invited, not being members of the Lumbermen's Association, which the deputation represented. The Premier, in reply to the deputation, admitted the justice of their demands, but before committing himself, expresed a wish to hear from other interests concerned.

No opposition to the proposed duty is anticipated save from the consumers in Manitoba and the Northwest, and it would seem that there is little ground for objections even from this source. There is sufficient competition in the lumbering business in Canada to prevent prices being advanced beyond that figure which would give a fair margin of profit to the manufacturer, and when prices fall below that basis, labor must suffer as a consequence.

The case of the deputation has been greatly strengthened by the promise of the C.P.R. that if an import duty should be imposed freight rates on lumber between Fort William and Winnipeg would be reduced, thus permitting the Georgian Bay lumbermen to supply the lumber which is now obtained from Minnesota. With such an arrangement, the probability of any advance in the price of lumber is very remote, and with this objection removed, the Dominion government will surely accede to the demands of the lumbermen, and thus place the trade in Canada on an equal footing with that of the United States.

Hon. Don. M. Dickenson has made the statement that the Secretary of the Treasury purposes prohibiting the importation of Canadian lumber into the United States. This is not generally believed, as the Dingley bill provides for additional duty as a retaliatory measure, but does not give power to prohibit exclusively. Even if such action were taken, the United States would eventually be the greatest sufferer. As far as Canada is concerned, it would only stimulate the growth of wood-working establishments and pulp mills, and, while for a time our lumber manufacturers might be somewhat handicapped, trade would soon adjust itself to the changed conditions, and the building up of the industry upon proper lines would be the result.

## PROBABLE ADVANCE IN LUMBER FREIGHT RATES.

THE CANADA LUMBERMAN has learned, from a reliable source, that the Canadian railroads are considering the question of advancing the freight rates on lumber, and that, while no decision has as yet been reached, there is a strong probability that some steps in that direction will be taken very shortly. It is not known what advance is proposed, but the railway authorities perhaps have in mind the restoration of the rates to the same basis as before the reduction was made a few years ago.

This information will no doubt be received with much surprise by the lumber trade, coming, as it does, at a time when efforts are being made to secure a reduction in the freight rate on hardwood lumber, thus placing it on an equality with pine. In the new schedule, if such is decided upon, we understand this inequality will be removed, but in a way which will not be acceptable to lumbermen. The rate on hardwoods will not be lowered, but on the other hand may be advanced, and pine lumber brought up to the same rate.

As far as can be learned, the railway authorities have singled out lumber as the commodity which could most easily carry the burden of additional freight rates. For what reason it is impossible for anyone conversant with the trade to imagine, but it is perhaps due to ignorance as to the actual conditions existing in the lumber trade. This supposition is strengthened by a remark made to the writer by a representative of one of the railways. It was to the effect that the lumbermen were particularly prosperous, and were accumulating great wealth—an envious position, which the lumbermen, unfortunately, do not occupy. Many of the hardwood manufacturers in Ontario, who would be most seriously affected by increased freight rates, owing to their dependence upon the railways, have in the last few years secured returns from their season's operations altogether inadequate in relation to the risk outlay of money, and amount of labor involved. The high price of logs, waste timber, and low price of lumber have prevented even the shrewdest mill man from making more than an average profit. What the lumber trade asks is, that instead of freight rates being advanced, the railways should assist in the development of the hardwood industry by giving lower rates, and thus permitting waste timber to be marketed and utilized in the manufacture of woodenware and other goods, instead of being burnt as fuel, as at present. By the adoption of this policy, the railways, the lumbermen, and the country generally would be benefitted.

So far as western Ontario is concerned, the

railways have not experienced vessel competition in the past, and hence they have pursued the policy generally exercised where monopolies exist. In all probability, however, the St. Lawrence canals will this season be deepened to fourteen feet. Lumber shipments from the Georgian Bay district to Montreal and the Eastern States will then be made largely by water, and the pine manufacturers will, to a great extent, be independent of the railroads. For this reason, if for no other, the railroads should encourage the hardwood trade, and give as liberal freight rates as possible.

The statement is made that the C. P. R. will probably offer more equitable rates to Winnipeg in the near future. This is what the lumbermen of Northwestern Ontario have wanted for some time, but not until a competing railway was in course of construction was there any hope of securing it. In the meantime, trade which legitimately belonged to Canadians went to the United States, as instance the importation last year into Manitoba from Minnesota of thirty-eight million feet of lumber.

Any attempt on the part of the railroads to advance rates on lumber will meet with a just but bitter opposition from the trade, and, if carried to a termination, must result in restricting the business of the railways and crippling the lumbering industry of this country.

## EDITORIAL NOTES.

THE importance to lumbermen of the Manitoba market is well illustrated by statistics of population which have just been prepared. According to the census of 1891 the population was then 152,000, while at the present time it is about 260,000, an increase in eight years of 108,000. In the next few years there is every probability of a still greater proportionate increase, due to the fact that the advantages of the western country are becoming more widely known abroad.

LUMBERMEN, we believe, considering the hazardous nature of their business field, are quite as successful as those engaged in other lines of industry. In taking a retrospect of the last two years, one is impressed with the few instances of financial embarrassment in lumber circles, and more particularly among the larger concerns. There have been, and always will be, some failures, either from unavoidable circumstances or from injudicious management. Perhaps the most common mistake made by the smaller manufacturers is to cut their stock at random, without properly enquiring into and studying the then existing and probable future requirements of the market. In this way much money has been lost. Instances could be cited where manufacturers have been unable to dispose of their lumber because of being cut to irregular and undesirable sizes, while it would have met with ready sale if greater attention had been given to its manufacture. Another certain advantage to manufacturers is publicity—let buyers know what you have to offer. From a representative of the CANADA LUMBERMAN who recently visited the Eastern States many enquiries were made as to where lumber, shingles and lath could be obtained in Canada, what mills could ship by water, and other particulars. This fact alone proves the wisdom and benefit of placing before probable buyers, through the medium of the CANADA LUMBERMAN, particulars of stock for sale.

LUMBERMEN and the public generally are awaiting with much curiosity the final report of the Ontario Forestry Commission, which is now nearing completion. This Commission, as most of our readers know, is composed of Messrs. John Bertram, president of the Collins Inlet Lumber Company; E. W. Rathbun, president of the Rathbun Company; Thos. Southworth, chief of the Ontario Forestry Department; J. B. McWilliams, crown timber superintendent; and A. Kirkwood, chief lerk Sales and Free Grants, Crown Lands Department. Judging by the personnel of the Commission, by the preliminary report submitted a year or so ago, and by the admitted necessity of adopting some practical system of forestry, a volume of information and recommendations of much value will be placed before the government, and will, we believe, form the basis of the future policy of the Ontario government with respect to the preservation and cutting of timber. The Commission will, it is believed, again recommend the extension of the fire ranging system, and also that the cutting of logs be restricted to trees of not less than twelve inches in diameter. The report will be of interest to lumbermen, and will aid in removing the erroneous opinion that the principles of scientific forestry are opposed to the interests of lumbermen.

## AN OFEICIAL LOG SCALE.

THE National Hardwood Lumber Association, which has members in nearly every hardwood market in the United States, has promulgated a scale for the measurement of logs, designed to accomplish, as far as possible, uniformity in that respect. The scale adopted is of use to all manufacturers of hardwood lumber, and is presented herewith.

Length in Feet.

| Diameter in Inches. | 12 | 14 | 16 | 18 | 20 | 22 | 24 |
|---|---|---|---|---|---|---|---|
| 10 | 27 | 32 | 36 | 41 | 46 | 50 | 54 |
| 11 | 37 | 43 | 49 | 55 | 61 | 67 | 74 |
| 12 | 48 | 56 | 64 | 72 | 80 | 88 | 96 |
| 13 | 61 | 71 | 81 | 91 | 101 | 111 | 122 |
| 14 | 75 | 88 | 100 | 112 | 125 | 137 | 150 |
| 15 | 91 | 106 | 121 | 136 | 151 | 166 | 181 |
| 16 | 108 | 126 | 144 | 162 | 180 | 198 | 216 |
| 17 | 126 | 144 | 169 | 190 | 211 | 232 | 254 |
| 18 | 147 | 171 | 196 | 220 | 244 | 269 | 294 |
| 19 | 169 | 197 | 225 | 253 | 280 | 309 | 338 |
| 20 | 192 | 224 | 256 | 288 | 320 | 352 | 384 |
| 21 | 217 | 253 | 289 | 325 | 361 | 397 | 433 |
| 22 | 243 | 283 | 324 | 364 | 404 | 445 | 486 |
| 23 | 271 | 313 | 359 | 406 | 452 | 496 | 541 |
| 24 | 300 | 350 | 400 | 450 | 500 | 550 | 600 |
| 25 | 331 | 386 | 441 | 496 | 550 | 605 | 662 |
| 26 | 363 | 433 | 484 | 544 | 605 | 665 | 726 |
| 27 | 397 | 463 | 530 | 596 | 661 | 726 | 794 |
| 28 | 436 | 509 | 582 | 654 | 728 | 800 | 873 |
| 29 | 457 | 533 | 609 | 685 | 761 | 838 | 914 |
| 30 | 493 | 575 | 657 | 739 | 821 | 904 | 986 |
| 31 | 532 | 622 | 710 | 799 | 888 | 976 | 1065 |
| 32 | 552 | 644 | 736 | 828 | 920 | 1012 | 1104 |
| 33 | 588 | 686 | 784 | 882 | 980 | 1078 | 1176 |
| 34 | 600 | 700 | 800 | 900 | 1000 | 1100 | 1200 |
| 35 | 657 | 766 | 876 | 985 | 1095 | 1204 | 1314 |
| 36 | 692 | 807 | 923 | 1038 | 1152 | 1268 | 1380 |
| 37 | 772 | 901 | 1029 | 1158 | 1287 | 1415 | 1544 |
| 38 | 801 | 934 | 1068 | 1201 | 1335 | 1468 | 1602 |
| 39 | 840 | 980 | 1120 | 1260 | 1400 | 1540 | 1680 |
| 40 | 903 | 1053 | 1204 | 1354 | 1505 | 1655 | 1806 |
| 41 | 954 | 1113 | 1272 | 1431 | 1590 | 1749 | 1908 |
| 42 | 1007 | 1175 | 1343 | 1511 | 1679 | 1846 | 2014 |
| 43 | 1046 | 1222 | 1396 | 1571 | 1745 | 1918 | 2092 |
| 44 | 1110 | 1295 | 1480 | 1665 | 1850 | 2035 | 2220 |

The above rule is a combination of the Doyle and Scribner rules. The Doyle rule is used on all logs 27 inches and under in diameter, and the Scribner rule is used on all logs 28 inches and over in diameter.

## ONTARIO TIMBER LANDS.

FROM the report of the Commissioner of Crown Lands of the Province of Ontario, it is learned that the revenue from woods and forests for the year ended December 31st, 1898, amounted to $981,186.45. Of this, $159,698.74 was on account of bonuses, and $65,053.37 on account of ground rent, leaving the net revenue from timber dues $756,434.34. This is a decrease as compared with the previous year of $345,953.63. Of this, $325,620.22 is in crown dues and $31,220.16 in bonuses, while there is an increase in ground rents of $10,886.75. It is explained that the revenue from timber dues for the year 1897 was abnormally large, the sales of lumber having been stimulated by the desire to reach the American market before the $2 import duty took effect.

The Commissioner states that the Department obtained information from its rangers and the lumbermen as to the probable cut of logs for export in the winter of 1897-1898, these figures indicating that from 156 to 160 million feet would be cut. The actual quantity of logs taken out for export is shown to have been, in round figures, 211 millions, or 51 millions more than was anticipated by the Department. It is a fact which attests the accuracy of the Department's estimate that the parties who were cutting for export at the time the estimate was made exported only 15 millions more than was anticipated, the balance of the excess, 36 millions, arising through Canadians who had always sawn in Canada being induced to sell for export.

The effect of the prohibition of the export of saw logs has been to materially reduce the cut of the past winter, and it is estimated that there will be from 160 to 200 million feet less taken out than last winter. The exports this year will probably not be more than 40 to 50 millions, made up of some 15 millions cut on the areas excepted from the prohibitory regulations, and quantities cut under authority of last year's licenses which were stuck in the streams and in the bush. When the report was submitted it was thought that there would be 50 million feet taken out last winter by parties who formerly exported. These 50 millions will have to be sawn in Canada, either at the existing mills or at others to be erected.

The Ontario lumbermen, the report states, have come to regard the position with a feeling that the future is with us in respect to raw materials. We possess large quantities of white pine, which is daily growing more valuable, and it would appear from information in possession of the Department that the Hudson's Bay slope —a few years ago regarded as being destitute of timber of commercial worth — has immense forests of spruce, which timber is daily increasing in value, and it may be that that region will in the end prove our most valuable timber possession. Bearing this in mind and remembering the ability of our merchants to exploit markets afar when those near at home are denied us, the people of Ontario need not fear any stagnation of their timber industries.

Following is a comparative statement for two years of the principal kinds of timber cut on Crown lands:

| | 1897. | 1898. | |
|---|---|---|---|
| Pine saw logs | 477,716,448 | 544,457,139 | feet B.M. |
| Other saw logs | 8,758,716 | 8,224 442 | " |
| Boom and dimension timber, pine | 26,084,737 | 25,640,239 | " |
| " " " " other | 706,860 | 1,337,222 | " |
| Square timber, white pine | 1,977 400 | 1,459,631 | cubic feet. |
| " " birch, ash, oak, elm, etc. | 28,000 | 18,786 | " |
| Cedar | 254,144 | 161,860 | lineal feet. |
| Railway ties | 278,955 | 1,152,213 | pieces. |
| Telegraph poles | 593 | 7,980 | " |
| Stave and shingle bolts | 1,466 | 1,895 | cords. |
| Pulp wood | 46,338 | 16,448 | " |

## CANADIAN EXPORTS AND IMPORTS.

The trade and navigation returns of the Dominion of Canada, as issued by the Department at Ottawa, contain interesting statistics of the imports and exports of various products, from which the following are compiled :

The total value of exports from Canada for the year ended June 30th, 1898, was $164,152,683, and of imports $140,323,053, against $137,950,-253 and $119,218,609 respectively for the preceding year. Of the total exports last year, Great Britain took goods to the value of $93,-065,019, the United States to the value of $34,-361,795, Germany $1,419,096, and France $1,-015,612.

### EXPORTS.

Turning to statistics of timber products, we find that the total exports for the year under review were $27,043,072, against $31,432,294 for 1897. The following figures show the value of exports of timber products for the last two years :

| Article. | Year ended June 30, 1897. | Year ended June 30, 1898. |
|---|---|---|
| Pine deals | $ 3,313,357 | $3,885,448 |
| Spruce and other deals | 7,094,485 | 7,918,366 |
| Battens | 24,594 | 20,350 |
| Planks and boards | 10,832,185 | 5,625,391 |
| Deal ends | 638,193 | 641,068 |
| Laths | 471,341 | 343,378 |
| Palings | 8,403 | 14,851 |
| Pickets | 35,532 | 18,052 |
| Joists | 23,531 | 5,229 |
| Scantling | 414,443 | 241,044 |
| Staves | 699,431 | 401,583 |
| Other lumber | 317,415 | 257,603 |
| Shingles | 1,201,562 | 994,438 |
| Pine and cedar shingle bolts | 623 | 656 |
| Cedar and tamarack posts | 54,537 | 23,415 |
| Sleepers and railroad ties | 229,780 | 101,191 |
| Stave bolts | 38,634 | 20,811 |
| Box shooks | 56,435 | 101,787 |
| Other shooks | 24,201 | 18,768 |
| Ash timber, square | 41,991 | 34,290 |
| Birch " | 194,180 | 143,623 |

| Other articles of the forest | 104,195 | 87,323 |
| Total exports of forest products | $31,432,294 | $27,043,072 |

In addition to the above exports of timber products, manufactures of wood were exported during the two years as follows :

| | 1897. | 1898. |
|---|---|---|
| Doors, sashes and blinds | $ 285,161 | $ 324,610 |
| Matches and match splints | 151,276 | 195,779 |
| Household furniture | 127,752 | 248,317 |
| Barrels | 30,238 | 29,054 |
| Mouldings, trimmings, etc | 16,201 | 14,915 |
| Pails, tubs and other woodenware | 13,150 | 20,171 |
| Spool wood and spools | 86,238 | 77,704 |
| Wood pulp | 741,959 | 1,210,923 |
| Other manufactures | 257,026 | 296,201 |
| Total exports of wood manufactures | $1,509,001 | $2,417,674 |

The figures below give the value of the exports of deals, boards, etc., to some of the principal importing countries :

PINE DEALS.—Great Britain, $3,788,871 ; Argentina, $18,000 ; Belgium, $4,373 ; France, $1,227 ; Portugal, $2,386.

SPRUCE DEALS.—Great Britain, $7,094,801 ; United States, $310,308 ; France, $1,259,753 ; Spain, $86,516 ; Brazil, $51,110 ; Australia, $133,994 ; Holland, $18,636 ; Portugal, $26,-515 ; British Africa, $12,627 ; Belgium, $11,-495.

LATHS.—United States, $336,634 ; Australia, $4,102.

PLANKS AND BOARDS.—Great Britain, $1,074,-519 ; United States, $3,706,887 ; Argentina, $202,585 ; Australia, $153,024 ; South West Indies, $95,902 ; China, $54,795 ; France, $29,342 ; Japan, $39,102 ; Spanish possessions in Africa, $26,868 ; Uraguay, $16,461 ; St. Pierre, $18,375 ; British Africa, $16,420 ; Belgium, $13,211 ; Germany, $20,044 ; Chili, $12,565 ; Holland, $14,004 ; Maderia, $10,462.

SCANTLING.—Great Britain, $121,373 ; United States, $64,746 ; Argentina, $39,970 ; Spanish possessions in Africa, $11,473.

STANDARD STAVES.—United States, $31,251 ; Australia, $1,469. Other staves and headings, United States, $305,288 ; Great Britain, $57,-237.

SHINGLES.—United States, $973,807 ; British West Indies, $18,287.

BOX SHOOKS.—Great Britain, $75,381 ; United States, $19,780.

PULP WOOD. — United States, $876,690 ; Great Britain, $34,772.

### IMPORTS.

The imports of forest products into Canada during the year ended June 30th, 1898, represented in value about $3,000,000, and included the following : Oak, $484,782 ; pitch pine, $295,748 ; fence posts and railroad ties, $68,-286 ; logs and round manufactured timber, $136,918 ; cherry, chestnut, gumwood, hickory and whitewood, $227,280 ; mahogany, $42,292 ; sawed or split boards, planks and deals not further manufactured than dressed on one side only, $384,767 ; timber or lumber, hewn or sawed, squared or sided, $462,363 ; walnut, $56,049 ; Spanish cedar, $9,228 ; sycamore, $1,782 ; white ash, $12,783 ; African teak, black heart, ebony, lignum vitæ and red cedar, $7,082 ; spruce clapboards, $1,432 ; laths, $8,450 ; shingles, $19,772 ; staves, $27,740 ; ivory nuts, $19,793 ; hubs for wheels, posts and like blocks, $9,082 ; hickory spokes, $73,864 ; hickory sawn to shape for spokes of wheels, $19,906 ; hickory billets, $1,470 ; felloes of hickory wood, $23,438 ; shovel handles, $16,-275 ; sawed boards, planks, etc., planed or dressed and tongued and grooved (duty 25%), $39,357 ; veneers of wood, not over 3/32 of an inch in thickness (duty 7½%), $60,026 ; woodenware, pails, tubs, etc. (duty 20%), $17,766 ; general manufactures of wood, $304,820.

---

Geo. E. Corbett, of Lequille, N.S., recently shipped a quantity of maple strips to Boston, to be used in the flooring of horse stalls.

When a representative of the CANADA LUMBERMAN met Mr. J. E. Murphy, of Hepworth, in Toronto last week, he had just returned from a business trip to the North-west. Mr. Murphy remarked that in Winnipeg, and in fact throughout Manitoba and the North-west, they were experiencing a veritable boom. There was a vast amount of building under way, and almost a famine in some grades of lumber.

## A BOOK FOR LUMBERMEN.

"The Adirondack Spruce"—a study of the forest in Ne-ha-sa-ne Park (Adirondacks), by Gifford Pinchot—The Critic Co., New York.

If any further proof were needed that the scientific foresters were not mere theorists, but were working along lines that might profitably be adopted by all lumbermen, the little book bearing the above title furnishes it.

Commissioned by Dr. Webb to provide working plans for his 30,000 acres forest in the Adirondack mountains, Mr. Pinchot, Chief of the Forestry Division at Washington, at once proceeded to make a thorough examination of the park. The spruce trees down to a diameter of two inches were counted on 1046 acres, and from these different lots average tables of yield and annual growth were compiled. In the introduction to the book he says : "The owners and operators of spruce lands in the Eastern United States will find within the covers of this little book a collection of facts and figures which is intended first of all to be of practical use." That he has succeeded in his object is beyond doubt. Although designed for spruce operators in the Northern States, much of its contents will prove of great value to Canadian pine lumbermen as well.

As a sample of the method of work we have just space to refer to one example among many given in the book : "A man owns 30,000 acres which yield on an average 3500 board feet per acre of spruce ten inches and over in diameter. To what limit will it be most profitable in the long run to cut, how much can he cut annually if he wishes to obtain a sustained annual yield, and how soon can he return to the portion cut over the first year and cut the same amount of timber above the same diameter limits as at first ?

"Look in Yield Table 1, column a, for the amount nearest 3500 board feet. 3480 in line 3 is the closest figure. All the desired information will be obtained on this line in the three tables.

"If the diameter limit is ten inches, the total stand is 30,000 x 3500—105,000,000 board feet ; the same yield can be obtained in thirty-seven years (Yield Table 1, column 1) ; the area lumbered annually will be 30,000—37—811 acres, the annual cut will be 105,000,000—37—2,837,838 board feet.

"If the diameter limit is twelve inches, the everage stand per acre is about 3000 feet (Yield Table 2, column a), the total stand is 30,000 x 3000—90,000,000 ; the same yield can be obtained in twenty-five years (Yield Table 2, column 1), the area lumbered annually will be 30,000—25—1200 acres ; the annual cut will be 90,000,000—3,600,-000 board feet.

"If the diameter limit is fourteen inches, the average stand per acre is about 2000 board feet (Yield Table 3, column a,) the total stand is 30,000 x 2000—60,000,000 board feet ; the same yield can be obtained in twenty years (Yield Table 3, column 1) ; the area lumbered annually will be 30,000—20—1500 acres ; the annual cut will be 60,000,000—20—3,000,000.

"By comparing these results it appears that it will be most profitable to cut to twelve inches, since the annual cut is then the largest. The area lumbered annually is about four hundred acres greater than if ten inches were the limit, but the annnal cut is about 800,000 board feet larger. Lumbering under these conditions would nevertheless be profitable, inasmuch as the average stand per acre for trees twelve inches and over in diameter is about 3000 board feet." This is given as indicating the practical nature of the book throughout.

---

## WOULD NOT BE WITHOUT IT.

Messrs. Cook & Gretz, Dashwood, Ont., in renewing their subscription to the CANADA LUMBERMAN, write : "We would not be without your journal, as we consider it a valuable paper for millmen."

---

We acknowledge receipt of the twenty-sixth annual special issue of the Timber Trades Journal, published by Messrs. Wm. Rider & Sons, Manchester House, Aldersgate street, London, E. C. This issue contains upwards of three hundred pages, in which the trade of Great Britain, Sweden, Norway, Finland, Russia, Germany, Canada and the United States is ably reviewed. The home section is accompanied by the portriats of prominent timber importers.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES AND OTHER FOREIGN MARKETS.*

VOL. V. TORONTO, ONT., APRIL 26, 1899 No. 14.

**CANADA LUMBERMAN**

PUBLISHED BY

**The C. H. Mortimer Publishing Co'y of Toronto, Limited**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

EXPERT BAND FILER OPEN FOR ENGAGEment May 1st; best references. Box 26, CANADA LUMBERMAN.

WANTED.—Line of wooden articles on commission by two salesmen going through England and Germany, starting about May 3rd. Box 45, CANADA LUMBERMAN.

PORTABLE STEAM SAW MILL (JOHN ABELL make) for sale; 25 h.p. Boiler and Engine, boiler in good condition, engine slightly broken; also House and Orchard in connection. Will be sold cheap. Apply to GEORGE A. FLEMING, Hockley, Ont.

TIMBER LANDS FOR SALE.

OAK TIMBER LANDS FOR SALE—I HAVE for sale in Eastern Kentucky and West Virginia several tracts of Timber Land, principally White Oak; in all about 60,000 acres. Apply to C. STARRAT, Farmers, Rowen County, Kentucky.

## AUCTION SALE OF Timber Berths

**In the Townships of Davis and Grant, District of Nipissing.**

The License for the undermentioned TIMBER LIMITS will be offered for sale by public auction on

**Wednesday, June 14th, '99, at 3 p.m.**

in the Rotunda of the Board of Trade Building, Toronto, subject to the terms and conditions to be set forth at the time of sale. The vendors reserve the right to one bid:—

Lot 1.—Berth No. 3, Township of Davis, being lots 1 to 7, inclusive of concessions 4, 5 and 6. This berth has never been operated on, and is a virgin forest.

Lot 2.—Berths 1, 2, 3, 4, 5, Township of Grant. The timber on berths 1 and 2 has been partially damaged by fire and partly cut over.

For further particulars apply to Scott, Lees & Hobson, barristers, etc., Hamilton, or to Peter Ryan, Toronto.

WANTED FOR SHIPMENT IN MAY, 20,000 feet Rock Elm Plank, 1½ to 4½ inches thick, 30 to 40 feet long. THOS. MYLES' SONS, Hamilton, Ont.

## Telephone Poles

THE UNDERSIGNED HAVE IN STOCK, AND are open for offers, f.o.b. cars, Killaloe Station, Ont.:

IMPORTANT TO LUMBERMEN

## FOR SALE BY TENDER.

### Valuable Saw Mill and Timber Limits in British Columbia

**56,542** ACRES, MORE OR LESS, VIRGIN forests of Oregon Pine, Cedar and Spruce Limits in British Columbia as follows:—

**BLOCK 1.**

Lot 51, 23,600 acres, more or less, Sayward District, Vancouver Island.

**BLOCK 2.**

Lot 439 G2., 9,280 acres, more or less, New Westminster District.

Lot 50 G., 6 720 acres, more or less, New Westminster, Chilliwack.

Lot 55, 15,900 acres, more or less, New Westminster, Chilliwack.

Lot 83, 1 042 acres, more or less, New Westminster, Chilliwack.

The above limits were selected years ago by competent cruisers at a time when every opportunity offered and was taken advantage of to secure the "pick" of timber lands, which have since become greatly enhanced in value.

**BLOCK 3.**

About 400 acres, more or less, of mill site and first-class farm lands, en bloc, situated on the north branch of the Fraser River about three miles east of New Westminster City. 200 acres, more or less, of this land is cleared, graded, drained and fenced in first-class manner, and been under cultivation a number of years.

The mill located upon this site is a frame mill, about 455 x 72 feet, with T across tail end of main building about 176 x 60 feet. The whole structure from foundation up is built in the most substantial manner—well timbered and braced with knees, metal roof, three (3) engines of 300 h.p. each, and fitted throughout with special machinery for working up British Columbia timber of all dimensions, as well as for working up the refuse into lath, pickets, box shooks, etc.; also planers, matchers, etc.

One large refuse burner; one large stone boiler house, metal roof, containing ten large tubular boilers, pumps, etc. Good frame office, boarding house, cottages, horse stables, machine shops and blacksmith shop.

Ample booming ground, constructed in the most substantial and convenient manner.

The New Westminster branch of the C. P. Railway crosses this mill site; also has a switch graded to the mill and through the yard, giving this property first-class railway outlet, in addition to best facilities and ample water for loading large ocean-going vessels, giving the property unrestricted access to the markets of the world.

Sealed tenders for the above property, either en bloc or each parcel or block separately, will be received by the Secretary of the undersigned at their office, 110 Wellington Street, Ottawa, Ont., up to MAY 20TH, 1899, at twelve o'clock noon.

All tenders to be marked "Tenders for Maclaren-Ross B. C. Property."

Tenders to be opened by the President and Secretary at the above address.

Terms, 10% cash, 20% in thirty days, and balance in six, nine and twelve months, by secured notes at 5% per annum. The property to remain vested in the Company until notes are fully paid.

The highest or any tender not necessarily accepted.

All letters requesting further information to be addressed to— "THE SECRETARY,
" Maclaren Ross Lumber Co., Limited,
" 110 Wellington St., Ottawa, Ont."

Ottawa, Ont -15th February, 1899.

WANTED.

A SECOND HAND SWING SHINGLE MAchine. Give particulars. D. H. SEAMAN, Woodford, Ont.

WANTED.

A SECOND-HAND SHINGLE MACHINE, suitable for a small country shingle mill. Address, DOMINION PAPER COMPANY, Montreal.

FOREMAN WANTED.

A PRACTICAL, COMPETENT SAW AND Shingle Mill Foreman wanted. Address immediately. THE RATHBUN CO., Deseronto, Ont.

WANTED—WILL EVERY

Lumberman getting out Hardwood Lumber please write us describing what you have and where, with rates to Buffalo. We can handle it from any section of the country. TAYLOR & CRATE, Buffalo, N.Y.

WANTED.

PRICE ON MAPLE, BEECH, BIRCH, ASH and Elm, ⅝, 1 and 2 inches. Also Basswood ⅝ and 1 inch, and pine 1 inch, all log run. Also on Spruce 1 inch, suitable for manufacturing boxes. Quote also on pine squares 2 9 x 2 x 4, 29 x 2¼ x 2¼, 29 x 2¾ x 2¾, 29 x 3¼ x 3¼. Quotations on cars at mill. Address, B. SOUTO & Co., 161 Front Street, New York.

### INQUIRY FOR BOX SHOOKS.

Messrs. Baker & James, 164 Corporation street, Birmingham, England, advise us that they are open to negotiate for regular supplies of Canadian box shooks and similar goods cut from spruce and pine. They will be pleased to hear from manufacturers or exportees who can ship by regular steamers to English ports, and who are prepared to undertake deliveries the year round. Canadian manufacturers desirous of extending their trade in this direction should communicate with the above firm.

### CURRENT TRADE CONDITIONS.

ONTARIO.

Fine weather has given a stimulus to building operations throughout Ontario. Much work is in progress and lumber is being purchased freely. Manufacturers and dealers report a brisk demand, on local account, for hemlock and the grades of pine and hardwoods used in the cheaper class of buildings. In Toronto the building season thus far has been much better than last year, or in fact any season for several years past. Unfortunately, some differences exist between the contractors and the bricklayers, and unless a settlement is reached in a few days a strike may follow, the result of which will be to cause capitalists to defer the erection of proposed buildings. While much lumber is being used in building work, the consumption in other departments of industry is proportionately large. The furniture and implement factories and all wood consuming industries are working to their full capacity, converting raw material into the finished product. Lumber prices in all districts are strengthening, but scarcely in due relation to the demand. Hardwoods have reached a fair price, owing to the scarcity of dry stock, but some grades of pine are still low. These, however, are likely to advance, and the dealer will act wisely who stocks up liberally at present quotations. A large percentage of the hardwood cut of 1899 has already been contracted for, and more would be but for the high prices which some manufacturers are asking. That these will be realized is somewhat doubtful, as it would seem that the limit for this season has about been reached. The hardwood industry of the Ottawa valley is to be developed, and thus the volume of production will be increased. Contracts have already been placed by New York houses for considerable quantities of birch, elm and ash to be manufactured in that district.

MANITOBA AND BRITISH COLUMBIA.

The demand for lumber in Manitoba and the Territories is such that dealers are finding their stocks inadequate. For some grades, particularly those which enter most generally into building operations, higher prices are being obtained. There is a vast amount of building under way in Winnipeg, but unfortunately a scarcity of building material, chiefly stone and brick, has developed, and the erection of some large buildings may, as a result, be delayed until next year. In the face of these conditions favorable to the lumber trade, it is learned that some cutting of prices has been indulged in by one or two dealers. Efforts are being made to secure adherence to list prices, which is certainly much to be desired. Some speculation is indulged in as to the successful tenderer for the annual supply of lumber for civic work in Winnipeg. The tenderers are the Rat Portage Lumber Co., D. E. Sprague and Dick, Banning & Co., and it is believed that the tenders range from $17 to $17.75 per M. The lowest tender submitted last year was $14.75. This is an illustration of the advance in lumber which has taken place.

The mills in British Columbia are rushed with orders, and prices are considerably higher than they were twelve months ago. The price of logs has advanced almost in the same degree, so that manufacturers are making little more profit. There is a boom in building at Vancouver and New Westminster, and consequently a steady call for lumber. A number of vessels are loading for foreign countries.

FOREIGN.

Buyers in Great Britain are showing a greater disposition to contract for Canadian timber, and consequently prices are strengthening. The spruce market has so far improved that c. i. f. quotations are now considered very satisfactory, first quality Quebec being held at £10 10s, second quality at £7 2s 6d, and third quality at £6 15s. These prices are, of course, much in advance of those realized at the recent auction sales. For New Brunswick spruce quotations are from £6 7s 6d to £9 15s, the latter being obtainable only for very desirable stock. Nova Scotia spruce is firm at about 5s per standard below that of New Brunswick. The white pine market is also firm, and there is a good demand for broad firsts, particularly of long lengths, the quotation being about £25 per standard. Second quality sells at from £16 to £18, and third quality at from £9 to £10. In the timber trade elm and birch seem to lead. The former sells at 2s 4d to 2s 5d for 50 cubic feet average, and the latter at 1s 6d

to 1s 7d for 16 inch average. For ash, oak and red pine the demand is only moderate. This is also the case with square and waney pine timber, the stock of which at several ports is too large.

UNITED STATES.

The demand for lumber in the United States is steadily increasing, and manufacturers and dealers are looking forward to a season of great activity. Prices continue to strengthen. The scarcity of box lumber is still the feature of the market, and substitutes are being sought for. It is not anticipated that prices will weaken before midsummer at least, and even then it is unlikely that there will be any material decrease. Tonawanda and Buffalo dealers report numerous enquires for low grade stock. There has been an unusual run on No. 3 barn, which is selling at from $14 to $15. No. 2 barn is also much in demand, and the upper grades are scarce. Mill culls are selling in Michigan at from $9 to $10, and the quantity available is extremely limited. In New York there has been an advance of $1 per thousand on box lumber, and 10-inch 13 foot boards are likely to bring higher prices. Spruce lath has advanced 40 cents within the past ten days, being held at $2.40 per thousand.

The situation in hardwoods has been somewhat relieved by the new cut. Basswood is getting dry and some of it has gone forward from the mills. Maple is slightly weaker, as the cut of the past winter was probably the largest ever known.

## NEW BRUNSWICK CEDAR SHINGLES.

The situation of the shingle market to-day is exactly what we predicted. There are practically no shingles in stock at producing points. On the other hand, the retail dealers are very short of stock, and the net result is a flurry of very large extent. Those few manufacturers who have held their shingles up to the present time are receiving to-day, delivered at Boston, the following prices: Extras, $3; clears, $2.50; second clears and saps, $2.

We believe that four times as many shingles as there are at producing points are sold for immediate shipment at these figures. It can be readily seen, therefore, that the market is entirely in the hands of the manufacturers. A great many of the latter are refusing to quote for shipment until after the summer mills start, say in June, believing that by such time shingles will be worth $3.25 or more. We are inclined to think this view of the situation is correct, and would advise all manufacturers to wait until they have shingles to offer, making no quotations whatever, for the reason that they are absolutely sure at such time of getting present prices, and certainly stand a strong chance of realizing considerable more.

## STOCKS AND PRICES.

Thomas Barber, of Keldon, Ont., has engaged a portable mill to cut about 100,000 feet of soft elm lumber.

The total cut of logs in Minnesota last winter is estimated at 640,000,000 feet. This is said to be the largest on record.

The Ontario Lumber Company, of French River, Ont., recently shipped several car-loads of deals to Great Britain by United States ports.

Spruce logs have recently been selling at Bangor, Maine, at $12 to $13 per thousand, which is about $2 higher than the prices quoted at same time last year.

The city council of Guelph, Ont., have accepted the tenders of Robert Stewart for the supply of cedar lumber, at $11.50 per M, and of H. M. Clemens & Co. for tamarac, at $12.94.

W. R. Thompson has disposed of his stock of elm, basswood and maple at Belmore, Ont., containing in all about 200,000 feet, to the Union Furniture Company, of Wingham.

Chew Bros., of Midland, Ont., have purchased from H. H. Cook the Upper Islands, extending from Moose Deer Point to Parry Sound. There is considerable timber on the property.

The steady demand for shingles at Tonawanda has practically cleaned out that market. Prices have advanced, and are now from 15 to 20 cents a thousand higher than they were last fall. On 18 inch clear butts pine, quotations range from $2.50 to $2.65, and on 18 inch XXXX from $3.35 to $3.50 f.o.b. cars Tonawanda.

At Saginaw, Mich., dry lumber is practically cleaned up. Log run is quoted at $14 to $22, box at $12 to $13, Norway bill stuff at $9.50 and upward, and mill culls at $9 to $10. Shingles are quoted at $2 to $3 for white pine and 15 cents less for cedar.

A Boston dealer reports that cargoes of wide random spruce are held at $17.50 to $18.50, while a special bill of wide stuff sold at $20. Bangor and St. John lath are in good demand at $2.25 to $2.40, which is the strongest opening price quoted for many years.

Chicago dealers have sent out new lists advancing nearly all the items in low grade lumber from 50 cents to $1 per thousand. There is a shortage of common stock boards in 8 and 10 inch widths. The stock of 12 inch boards is in better shape. In No. 2 common boards an advance has been made of 50 cents a thousand on 8, 10 and 12 inch, 12, 14, 16 feet. On shingles an advance of 5 to 10 cents has been made on both pine and cedar. There is a famine in lath, present quotations being $2.25 to $2.30 for white pine and $1.90 to $2 for mixed.

On April 14th the following vessels were loading lumber at British Columbia ports: Ship Atlacar, at Vancouver, for South America; ship Alex. McNeal, at Victoria, for Adelaide, Australia; ship Orion, at Chemainus, for Calcutta; barque Undaunted, at Chemainus, for Cape Town, South Africa; ship British General, at Chemainus, for Adelaide, Australia; barque Sebastian Bach, at Chemainus, for Tientsin, China; barque Burnel, at New Westminster, for Chile; schooner Weatherwax, at New Westminster, for San Francisco. The ship Clan Galbraith, the schooner Hawaiian Isles, and the barque Star of France were also ready to load.

## SALE OF CANADIAN WOOD GOODS.

Messrs Churchill & Sim, London, England held an auction sale of wood goods on April 12th, at which 3 x 9 third pine realized £7 10s, 3 x 8 £6 15s, and 3 x 7 £6 10s, while 3 x 8 first spruce made £7 15s. A line of two inch first spruce fell at £8 7s for seven inch, and £7 10s for four and five inch. A large parcel of oak sold at 92s 6d to 100s per load, and several lots of birch at 72s 6d to 77s 6d. Details follow:

SPRUCE.—Ex Unique, from Quebec—12-16 ft. 3 x 9 and 2 1-2 x 6, £7. Ex Progressist, from Quebec—13-14 ft. 3 x 8 first quality, £7 15s; 13 ft. and 12 ft. 3 x 8, £7 15s; 12-14 ft- 3 x 7, £7 15s. PINE.—Ex Progressist, from Quebec—14-16 ft. 1 1-2 x 8-22 first quality, £17 5s; 12-16 ft. 1 1-4 x 7, £15 5s; 12-16 ft. 1 1-4 x 6, £14 10s; 12-16 ft. 1 1-4 x 5, £13; 12-16 ft. 1 1-4 x 4, £13. Ex Monarch, from Quebec—9-15 ft. 2 x 12-24 first quality, £21; 16 ft. 2 x 11, £16; 12-15 ft. 2 x 10, £16; 12-16 ft. 2 x 9, £17 10s; 9-11 ft. 2 x 8-10, £14 10s; 9-11 ft. 2 x 6 and 7, £12 5s; 9-11 ft. 2 x 5, £13 10s; 6-8 ft. 2 x 10, £15 5s; 6-8 ft. 2 x 8 and 9, £13 15s; 6-8 ft. 2 x 7, £12 5s; 6-8 ft. 2 x 6, £11 10s; 6-8 ft. 2 x 5, £12 5s; 6-8 ft. 2 x 4, £9 5s and £10; 6-16 ft. 1 1-2 x 12-23, £18 15s; 6-15 ft. 1 1-2 x 11, £16 15s; 6-16 ft. 1 1-2 x 10, £14 15s; 6-16 ft. 1 1-2 x 9, £15; 6-11 ft. 1 1-2 x 7 and 8, £11 15s; 6-11 ft. 1 1-2 x 6, £10 15s; 6-11 ft. 11-2 x 5, £10-10s; 6-11 ft. 1 1-2 x 4, £9 10s; 6-11 ft. 1 1-4 x 11 and 17, £14 5s; 6-11 ft. 1 1-4 x 9 and 10, £13 10s; 6-11 ft. 1 1-4 x 8, £10 15s; 6-11 ft. 1 1-4 x 7, £10; 6-11 ft. 1 1-4 x 6, £9 15s; 6-11 ft. 1 1-4 x 5, £9 10s; 6-11 ft. 1 1-4 x 4, £9 and £9 5s. Ex Merino, from Quebec—12 ft. 3 x 10 third quality, £7 10s; 12 ft. 3 x 9, £7 10s; 12 ft. 3 x 8, £6 15s; 12 ft. 3 x 7, £6 10s and £6 15s; 13 ft. 3 x 9 third quality (Hurdman's stock) £7 10s; 12 ft. 3 x 9, £17; 13 ft. 3 x 8, £6 15s; 12 ft. 3 x 8, £6 15s; 12-13 ft. 3 x 7, £6 10s; 11 ft. 3 x 9, and 12 £7; 10 ft. 3 x 9, £7 5s; 11 ft. 3 x 8, £6 10s; 10-11 ft. 3 x 7 and 8, £6 10s; 6-8 ft. 3 x 7-11 first and third quality, £8.

OAK TIMBER.—Ex Fernmoor, from Quebec—Seven pieces 18 inches and up, £5 per load; six pieces, £4 17s 6d; 100 pieces under 18 inches, £4 12s 6d, £4 15s and £4 17s 6d.

BIRCH TIMBER.—Ex Hazelmoor, from Quebec—About 200 pieces, 18 inches and up, £3 12s 6d and £3 17s 6d per load.

## BEECH SQUARES WANTED.

A Liverpool firm of timber importers and saw millers write to the CANADA LUMBERMAN as follows:

"It is possible that we might be able to use very large quantities of beech squares of the following sizes or multiples:

| | | | |
|---|---|---|---|
| 10 per cent | .... | 12½ x 2¼ | square |
| 25 " | .... | 12½ x 2⅛ | " |
| 25 " | .... | 9¼ x 1⅞ | " |
| 15 " | .... | 9¼ x 2⅛ | " |
| 5 " | .... | 9 x 1½ | " |
| 5 " | .... | 9 x 1⅝ | " |
| 5 " | .... | 12 x 1⅞ | " |
| 5 " | .... | 12 x 1 5/8 | or 2 square |
| 5 " | .... | 10¼ x 1⅞ | square. |

"These would have to enter into competition with English beech, and would necessarily have to be at a very low price, as birch planks are being largely shipped at a very low price. We have no doubt that beech could, if it grows plentiful enough, be cut and shipped at as low a price, or possibly lower. It would be necessary for these squares to be absolutely first quality in every respect, perfectly straight grained, free of knots and other defects, and it would also be necessary after the squares have been cut that they be immediately steamed in a boiler under pressure with live steam (a pressure of 10 to 20 lbs. to the square inch for some hours would be sufficient for this) to eject and kill the sap contained in the wood, and then before being shipped to be allowed to cool off and season a little. This is to prevent splitting upon the ends. The steaming need not necessarily be a costly process; it is done in our mill as soon as the wood comes from the saw, and it has most beneficial results."

Readers of THE LUMBERMAN wishing the address of this firm may obtain same by enclosing postage to this office.

## SHIPPING MATTERS.

The Timber Trades Journal reports that very little chartering has taken place of late from Canadian ports, but that engagements have been made by liners to Liverpool from Montreal and Quebec at 35s per standard, June-July sailing. The following fixtures are recorded: Quebec to Bristol, steamer Ramleh, 42s 6d, June; West Bay, N. S., to w. c. England, 1100 standards, 35s; St. John, N. B., to w. c. England, 1100 standards, 38s 9d; steamer Russ, to w. c. England or Clyde, 40s.

The following additional charters are reported: Bark, 398 tons, St. John, N. B., to Ireland, deals, 55s; steamer Manuka, Grindstone Island, Que., to w. c. England, 40s; bark, 400 tons, Miramichi, N. B., to e. c U. K., deals, 47s 6d; bark Stadacona, Yarmouth, N. S., to Buenos Ayres, lumber $10.

John Calcott's saw mill, about three miles from St. Thomas, Ont., was destroyed by fire last week. The loss is $3,000, with no insurance.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

## C. P. R. FREIGHT RATES.

Mr. Geo. A. Fowler, Lumber Agent, C.P.R., Ottawa, furnishes the following schedule of freight rates on lumber on that railway:

To Toronto and Hamilton—from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Spanish Forks, Biscotasing, Massey, Cutler, Spragge and Algoma, 12 cents; from Dean Lake, Thessalon, Desbarats, and Isbester, 14 cents per 100 lbs. on pine and soft woods, the rate on hardwoods being one cent per 100 lbs. higher; from Ottawa, Hull, Aylmer and Dechenes Mills, Arnprior, Braeside and Pembroke, to Toronto, the rate is 10 cents both on pine and hardwood.

To Albany and points taking Albany rates—from Ottawa, Hull, Aylmer and Deschenes Mills, 10 cents; East Templeton, Buckingham, Calumet and Carleton Jct., 11 cents; Arnprior, Braeside and Renfrew, 12 cents; Pembroke and Eganville, 13 cents per 100 lbs. These rates are based on a minimum of 30,000 lbs. per car.

To New York, for track delivery and all points on the Hudson river, or the New York Central and West Shore railways from Ottawa, Hull, Aylmer, Deschenes Mills, 15c. per 100 lbs.; from Carleton Junction, 16c.; from Arnprior, Braeside and Renfrew, 17c.; from Eganville and Pembroke, 18c. The rates to New York, including litherage within the free litherage limits of New York harbor, are 2 cents per 100 lbs. additional.

To New York via barge line from Albany—from

LAWRENCE & WIGGIN
Wholesale Lumber Dealers - 55 Kilby Street, BOSTON, MASS.

Aylmer, Buckingham, Deschenes Mills, East Templeton, Hull and Ottawa, pine and shorts in lots of 50 M feet and upwards, $2.50 per M feet, under 50 M feet, $3.25 ; lath in lots of 250 M feet and upwards, 50 cents per M pieces, under 50 M pieces, 60 cents ; hardwood in lots of 50 M feet and upwards, $4 per M feet, under 50 M feet, $4.25 ; from Carleton Jct., 25 cents per M feet lumber and 5 cents per M pcs. lath higher than Ottawa rates ; from Arnprior and Braeside, 50 cents and 10 cents higher ; from Renfrew, Eganville and Pembroke, 75 cents and 15 cents higher. Lumber and lath not to exceed 3,000 lbs. per thousand feet pine, 4,000 lbs. per thousand feet hardwood lumber, or 600 lbs. per thousand pieces lath. Above rates include lighterage within regular lighterage limits in New York harbor, in lots of lumber 50 M feet and over, and lath 250 M pcs. and over ; under that amount subject to extra towage. Seasoned pine shorts under 5 feet in length will be charged 50 cents per M feet over rates named on seasoned pine lumber.

To Cape Vincent, Clayton, Fulton and Oswego, N. Y.—from Ottawa, Hull and Carleton Jct., softwood $1.90 per M feet, lath 38 cents per M pcs., shingles 19 cents per M, hardwood 9½ cents per 100 lbs.; from East Templeton, Aylmer and Deschenes Mills, softwood $2, lath 40 cents, shingles 20 cents, hardwood 10 cents ; from Arnprior, Buckingham and Braeside, softwood $2.05, lath 41 cents, shingles 20½ cents, hardwood 10½ cents ; from Renfrew, Eganville and Pembroke, softwood $2.30, lath 46 cents, shingles 23 cents, hardwood 11½ cents.

To Charlotte, Rochester, Rome and Utica, N.Y.—from Ottawa, Hull, and Carleton Jct., softwood $2.20 per M feet, lath 44 cents per M pcs., shingles 22 cents per M, hardwood 10½ cents per 100 lbs ; from East Templeton, Aylmer and Deschenes Mills, softwood $2.30, lath 46 cents, shingles 23 cents, hardwood 11 cents ; from Buckingham, Arnprior and Braeside, softwood $2.35, lath 47 cents, shingles 23½ cents, hardwood 11½ cents. From Renfrew, Eganville and Pembroke, softwood $2.60 per M feet, lath 52 cents per M pieces, shingles 26 cents per M, hardwood 12½ cents per 100 lbs. To Sacketts Harbour and Syracuse, N.Y., rates on softwood, lath and shingles are same as to Charlotte, and rates on hardwood same as to Cape Vincent. Hardwood lumber rates will also apply on shipments of box shooks, bolts, chair stock (rough), clapboards, hoops, hoop and hop poles, lath, last blocks, posts and rails, shingles, staves and heading, wood pulp, pulpwood, timber and wood ashes.

Minimums: Softwood lumber carloads, 10,000 feet ; lath carloads, 50,000 pieces ; shingle carloads, 100,000 shingles ; hardwood lumber carloads, 30,000 lbs.

Summer rates effective April 1st are : To Montreal and points taking same rates—from Ottawa, Hull, Aylmer, Deschenes Mills, East Templeton and Buckingham, softwood $1.00 per M feet, lath 20 cents per M pieces, hardwood or dimension timber 4 cents per 100 lbs.; to Quebec and Three Rivers—from Ottawa, Hull, Aylmer and Deschenes Mills, softwood $2.00, lath 40 cents, and hardwood and dimension timber 8 cents : from Carleton Jct., softwood 15 cents, lath 5 cents, and hardwood and dimension timber 1 cent higher than Ottawa rates ; from Arnprior and Braeside, softwood 50 cents, lath 10 cents, and hardwood and dimension timber 2 cents higher ; from Renfrew, Eganville and Pembroke, softwood 75 cents, lath 15 cents, and hardwood and dimension timber 3 cents higher. Dimension timber rates will apply on lumber over 3 inches thick and over 16 feet in length.

To Boston and points taking Boston rates for local delivery—from Aylmer, Deschenes Mills, Ottawa, Hull and points east thereof in Ottawa Valley 15 cents, Carleton Junction 16 cents, Arnprior, Braeside and Renfrew 17 cents, Pembroke and Eganville 18 cents per 100 lbs. To Boston, Mystic Wharf, East Boston, Mass , and Portland, Me., for export—from Ottawa, Hull and Buckingham 11 cents, Aylmer and Deschenes 12 cents, Arnprior and Braeside 13 cents per 100 lbs. Rates for export will ex Nov. 30th, 1899, unless sooner cancelled.

To Buffalo, Black Rock and Suspension Bridge, N. Y.—from Ottawa, Hull and Aylmer 12 cents, Carleton Junction 13 cents, Arnprior and Braeside 14 cents, Pembroke and Eganville 15 cents per 100 lbs.

To Detroit, Mich.—from Ottawa, Hull, Aylmer and Deschenes Mills 14 cents, Buckingham 15 cents per 100 lbs.

# CORRESPONDENCE

## THE NATIONAL HARDWOOD LUMBER ASSOCIATION.

Mr. W. A. Bennett, of Cincinnati, Ohio, president of the National Hardwood Lumber Association, has sent the CANADA LUMBERMAN copy of a letter which he is sending to members of the association. The letter reads as follows :

"It is my earnest desire to have you feel that the success of our cause is in your hands and the future history of our organization depends entirely on what you by your individual and personal efforts make of it. We are growing as any just and righteous cause must and will eventually, yet I want to say this, it is not wise to depend on the officers and directors to make a success without the personal assistance of the membership.

"The press has been of untold value to us and offers its good offices to us on all occasions, which should be reciprocated by business in their line, and I am glad to see some of you are repaying them, while others are not on account of more business than you can attend to without advertising. This is no excuse, in fact, this is the proper time to advertise and pick your trade, allowing your old time slow paying customers to be educated by some of your competitors and getting hold thereby of a new trade who discount their bills. This is not a newspaper advertising letter, but it is one on the Golden Rule order, "You scratch my back and I will scratch yours."

"I want each member in the association to procure at least one member within the next thirty days, and send your check for $3.00 in for same. In that way, our members will be doubled. Don't stop on this."

## HARDWOOD INSPECTION RULES.

The following letters in reference to the adoption of standard inspection rules for lumber have come to hand since our April issue was printed :

CINCINNATI, OHIO, MARCH 27TH, 1899.

DEAR SIRS,— I am glad to see that you are pushing the matter of uniform inspection in the line of a circular letter. The answer to your question, which is as follows, "Do you consider that the adoption of standard inspection rules would be in the interest of the lumber trade of Ontario ?" My answer is this, what applies to Ontario would apply to the Dominion, and what applies to the Dominion would apply to any lumber manufacturing section in the western hemisphere. The same kinds of lumber are found in Ontario that are found in Michigan and Wisconsin, and if it be a good thing for that section of the country that borders on your territory, why should it not be a good thing for Ontario ?

2nd. "In what way, if any, has the absence of such rules been a disadvantage to the lumber trade in the past ?"

That question practically answers itself. In the past, there has been no uniform system of rules, each market having its own ways and means of doing business, and unless an inspector was thoroughly acquainted with the different markets, he could not apply the rules in an intelligent way.

3rd. "Could rules be compiled which would serve all sections of the province and apply to export as well as domestic trade ? If not, why not ?"

They certainly could be, and it only requires united effort to accomplish this purpose.

4th. "How, in your opinion, could the adoption of uniform rules be best accomplished ?"

In answer to this, I would say along lines as laid down by the National Hardwood Lumber Association, which, of course, can be improved on, yet they are certainly of such a character that will be entering wedge to the accomplishment of this fact, and of which you are probably not thoroughly informed. We have appointed from different sections of the United States competent inspectors of all kinds of hardwood lumber. They are to meet in Congress at the Association meeting to be held at Charlevoix, Mich., July 13th, and no change in any rule can be made without their sanction. If Canada desires a representation, and a competent inspector would be recommended, or more than one competent inspector, say two, they will receive the recognition and appointment in the same manner as those that have been appointed from the United States.

5th. "Would you be willing to co-operate in a movement to secure standard rules ?"

In answering this question, I would say certainly any fair-minded legitimate business man would see the point in a minute. We have no trouble with this class of people nor any trouble in this line so far as that matter goes. The move in this respect seems to be unanimous.

It would seem to me that you have about covered the field in your questions, and comment further is unnecessary. I am indeed glad to see you have taken the interest manifested, and your paper deserves recognition among all intelligent lumbermen throughout the country.

W. A. BENNETT,
President National Hardwood Lumber Association.

KLOCK, ONT., APRIL 3RD, 1899.

DEAR SIRS,—With respect to the adoption of national rules for the inspection of lumber I will answer as follows :

1. I do not think so. The present system is quite satisfactory.

2. I do not think the absence of such rules has been a disadvantage to the seller.

3. Possibly rules could be applied which would serve all sections of the province. At present, however, we have very little trouble with lumber we sell to exporters.

4. Never have given the matter any consideration.

5. Prefer to let the matter remain as it is at present.

It would be very difficult to get men as inspectors who understood other branches of the trade, such as managing men, shipping and sometimes office work. This scheme would work very well with a large firm who could employ an inspector steadily in the yard. As far as we are concerned, we make it a point to have inspection at the mill and allow no claims after. We think disputes more frequently arise through people being careless in describing their stock, and the small mill men are very often taken advantage of, as the majority of them are not posted themselves.

We have had practically no trouble with parties to whom we have sold for export. We have always employed an experienced culler, and we know most of the large mill owners on the Ottawa do the same, and very seldom have any trouble over the grading of their lumber.

Yours truly,
R. H. KLOCK & CO.

## FROM THE BRITISH COLUMBIA MANUFACTURERS.

Following is a copy of the memorial presented to the Dominion government by Mr. P. D. Gordon on behalf of the British Colnmbia Lumber and Sbingle Manufacturers' Association :

Sir : The subject of import duty on lumber and shingles continues to be an issue of practical importance with us, and for the purpose of discussing this, a conference was held this day between manufacturers and the District Members of tne Dominion Parliament. As a result the following resolution was passed :—

"Resolved, that the Dominion Government be again asked to impose an import duty on lumber and shingles similar to the import duty imposed on these articles by the United States."

We addressed the Government on this subject a little over a year ago, a copy of which communication is attached. The history that our trade has since recorded has served to convince us even more that the tariff laws, as now existing, subject us to unfair competition from the United States. The returns from the various Collectors of Customs show that large quantities of the products of the forest have been admitted free of duty into British Columbia, the North-west Territories, Manitoba and Ontario, while our exports are restricted by unfriendly legislation.

We submit that the manufacture of lumber and shingles in our own country necessarily contributes much to the revenue, directly and indirectly, and also provides a means of support to population, while if these articles are admitted free, the revenue is lost, no population is supported, and we venture to assert that the consumer is not materially benefitted.

Apparently it was felt by the Government three or four years ago that the settlers in Manitoba and the North-west needed what assistance could be given them. Among other advantages they have had is free lumber and shingles. May we remind you that the necessity for this, if it ever existed, has surely been lessened by several years of bountiful harvests and prosperity ; at the same time we feel that we can fairly claim that, should an import duty be imposed, the competition we have experienced from Ontario manufacturers in the past, and which we may expect will be increased in the future, is sufficiently keen to prevent any advance in prices on our part. A very slight study of the question will convince anyone that the markets where our products find a natural outlet are always keenly contested by Canadian manufacturers. What we really most want and what we hope to gain by an import duty being imposed, is an enlargement of our market.

We have in this province, as you will be aware, plenty of timber of well known and well tested economic value. We have cherished the idea long, in the face of continued adversity, and we still continue to cherish it, that the trade here is capable of large development. As provinces of a great and growing Dominion, we are steadily drawing closer together and getting more inter-dependent on each other for such supplies and articles of daily use that one province naturally produces and the other lacks.

We feel that the imposition of an import duty would be of general benefit, not only to the trade, but to the people, and that it would not inflict the least hardships on any one section.

May we again urge on the Government, through you, that the wishes of our trade, as voiced by the various provinces, receive your practical consideration during the coming session of Parliament.

JOHN HENDRY, Chairman.
E. H. HEAPS, Secretary.

## NEW METHOD OF GRANTING TIMBER LANDS.

THE government of Nova Scotia passed an Act at the last session permitting the Department of Crown Lands to lease timber lands instead of granting them absolutely in fee simple as hitherto. It is understood to be the intention of the Government to substitute leasing for absolute grants in respect of timber lands very generally in the future. The provisions of the act are as follows :

Instead of issuing grants as heretofore under the provisions of section 7, of chapter 8, of the Revised Statutes of Nova Scotia, the Governor-in-Council may issue permits to parties desirous of obtaining timber lands within the Province, which said permit shall be in the nature of a lease of said lands for the purpose of cutting and removing timber only, and may be for a period of not more than twenty years, subject, however, to renewal for a further period of twenty years at the expiration of the first period, providing all payments in respect of such lease or permit have been made at the time of the application for such renewal.
